This is pretty funny, thanks. I agree with "lightening things up a bit." I think we're all (Myself, very much included!) taking the issues and ourselves way too seriously. I've recently picked up a bunch of older (late 70's) AR and CB magazines. After spending the past couple of days reading through the various articles and editorials, something became very apparent. The more times change, the more they stay the same. I used to think that this was a moronic statement, but I finally got it. At twelve/thirteen years old, I really didn't pay attention to the "issues" re. amateur and CB radio, I was too busy enjoying "my" radio. "My" radio hobby was replacing the fixed telescoping antenna with coax and a dipole, a Part 15 rule violation. Did I harm anybody? Common sense tells me no, but a rule violation it remains. That same common sense later told me that it was NOT cool to run an amplifier although I was aware of their existence.

Now this is not a subliminal message to condone rule breaking on "pro-rated" basis. It's about how we've possibly allowed certain "technicalities" to cloud our common sense.

As I went thorough these "radio rags," circa 1976 through 1979 (and a few through 1986 too.) I came across the exact same arguments I see today. I read about the 155.3 mi. limit being challenged, "HFers" operating between the upper limit of the CB band and the lower limit of the 10m ham band, the "all too frequent" unlicensed intruder in the 10m band, Morse code not being allowed on CB per Part 95 yet FCC approved Part 15 devices doing just that, curmudgeon's belittling CBers, CBers with crummy attitudes toward hams, and so on...and so on...and so on.

I thought this might be a nice follow-up observation to the "let's lighten up a bit" message. By all means, crack down on intruders, unlicensed ops., illegal amplifiers, potty mouths, (Is it hard to crack this one?) etc., and bring pressure to bear. I guess I'm just thinking out loud wrt an observation that the issues have always been there and will likely outlive us all. I personally don't want to get so hung up on the minor ones that I forgot to just have a little fun and enjoy the radio, in whatever capacity. Hope you guys understand and take this post in the spirit in which it was meant. Have a happy. :-)

>> will have a stronger signal, and a better chance of being heard.

It also shows that they know nothing about signal strength. In a QST article about two years ago, tests were independently done on signals with and without an amp. A 100 watt signal produced a reading of s-5. Boosting it to 1000 watts with a linear only produced an increase to s-7.

All that power for a two point increase in strength? I'll take a good antenna any time. Besides, you can't work 'em if ya can't hear 'em.

HF has little, if any, effect on the human body at power levels under 10,000 watts.. I don't think they have much to worry about... You need to worry about cataracts at 440 and 1.2Ghz and your "balls" around the same frequencies.. 2M will heat up your entire body and cause those problems.. but HF (which 11Meters/CB is) really doesn't affect the body much unless you're holding on to the antenna when you transmit...

Toll,
It was because the hams themselves requested it. ARRL and individual
hams had become disgusted with the junk that was being carried on and
pressured FCC to do something about it.
It was at this time that Mr. Hollingsworth was promoted to Legal Counsel
for the Enforcement
Bureau. At the same time, there was another storm brewing out in
Wisconsin and in Michigan
from consumers being swamped/receivers paralyzed by illegal CB stations.
No need to rehash
the results of that.

"How about a link, Jer? Still waiting for one concerning the ITU. Can't
find what you claimed anywhere, concerning the illegal US cber
complaints on the freeband. Even the town that sponsored 2346 didn't
pass legislation or have their local law enforcement move on anything at
all concerning cb interference after it passed. Do you have anything at
all that you can point me to concerning the "storm" of cb interference
in Michigan or Wisconsin? The "problems" appear practically nonexistent
outside these pages."

Anyway, a few out of the larger number of hams were creating much
adverse
attention in the international community, so ARS was hit first. Rest
assured, it won't stop with
ARS.

"Correct, but it just may take a long rest with ARS. Worst offenses take
priority, which is why they remain concentrated on hammies. If it was
just a select few, they would be finished."

No need to argue over that, either. Que sera, sera.

"The only silly logic is your own. The freqs in question are NOT your personal property, including ones that may be in use."

They most certainly are if the person or corporation paid for them Twisted. That's why the FCC has those frequency auctions.
On another note, as I mentioned to Sparky, I have yet to see one single documented case where any of the arguments, from your side of the fence Twisted, has resulted in a case being dismissed against a person(s) whom the FCC charged with violating Part 95 rules.

"That's because you suffer from the same malady that Sparky suffers from, among many others...poor deducibility and comprehension skills of that of what you read. See, you have it backwards..y'all accused me of putting emergency ops in danger by barefoot freebanding and interfering with others...the burden of proof is on you, not me, which effectively ends any argument you may put forth, as it always does with your usual failure to produce."

There are plenty of examples of people being charged, and found guilty, some of which have been posted to this group in the past.

"Um, please post one of those busted for simply freebanding/DXing. I missed it."

Now, if those same arguments were not "silly" then there has to be examples in the public court records to prove it, i.e. the administrative law judge is on record agreeing with the reasoning offered, and based his decision to dismiss the case on his belief that the argument is valid. To date not one has ever been provided by you nor anyone else with views similar to yours.

"To date, not one case has been shown where an emergency op was bothered by a cber, but you have calimed it occurs."

And that is the bottom line.

"Sure is."

Does the logic stand up in a court of law or does it not. If it does then where are the cases to prove it?

"That's what I have been telling you for over 2 years..you still haven't shown one single incident of emergency op interference or damage done by barefoot freebanding cbers to date, not one, but you still offer

lipservice to the contrary, based on nothing more than the way you wish
things to be."

Hello NF: The Lady obviously knows what she wants. I am sure she is familiar with the range equation, dissipated power, amplifier efficiently, and alternator installation practices.

As I agreed with Toll Free, for safety's sake during the winter months, a 16 pill would be a wise choice, for comfort and safety.

I believe these are important things that need to be thought of, to keep your honey comfortable and safe.

Suggest a 8 or 16 pill amp, a 250 amp alternator, Stargun antenna, and use RG393 or RG217 coax. Also suggest the fan cooling the amp be slightly canted to allow the flow of warm air to be pointed to the copilots side of the car/truck.

The hard part will be routing the 4 or 2 gauge wire thru the fire wall of the vehicle. If you look below the vehicle and around the firewall you will see knock out holes and such that have rubber plugs in them. The positive wire must be properly protected, and kept away from sharp edges. And properly fused at the battery, and have a proper insulator or wrap around the wire going thru the fire wall or floor of the vehicle. Some of the local high power stereo shops have the fuses, wire, and feed thru hardware.

Always glad to help.

Jay in the Mojave

To me, that does more harm
than good in that it makes
all Amateurs seem like grouchy curmudgeons, makes those that DO operate
illegally dig in , and,
perhaps, makes them that much more determined to do so. NEVER pull a
tomcat backwards!

Gently nudge him forwards so those claws can't hurt! LOL!

All the nudging in the world won't move a Tomcat forwward if you are
simultaneously kissing his rear end, Jer.
-Aaron-

"LOL....I told everyone that you were a cat lover. And as promised,
here...I hold no grudge. You helped me get a gig in Michigan, maybe I
can assist you in getting your first paying job. Now go chase your
dream, and good luck. Don't be discouraged if they reject you.
Acceptance rate is 3 out of 100."
--
WRITER'S GUIDELINES FOR I LOVE CATS
I am always interested in new ideas for I Love Cats and request that you
either send a paragraph or two about your idea or the finished piece. It
would be nice to not only have the printed copy, but also a 3-1/2 inch
disc in a format compatible with Windows 95. No outlines, please. I do
not want poetry (as I seldom publish it) but I am interested in feature
stories about cats and their owners, interesting or odd happenings with
cats, tips for cat owners, health issues, nonfiction pieces, behavior
problems, that sort of thing. Please do not send stories about cats that
live outdoors.
I'm looking for a story--preferably with photos or drawings--that is
1,000 words, tops, ideally 500-700 words. I buy all rights, since we
copyright all stories. You must also sign a consent form, which spells
out all resale questions. I pay between $40-$150. Payment is upon
publication.
Nonfiction pieces can be longer and the price varies, but starts at $50.
Color slides are always a plus as I am usually in need of color photos.
Short fillers are also welcome and payment is $25. I have quite a
backlog at the moment and we go to press about four months ahead of the
publication date. Please do not send any stories that have been

published in other cat magazines or competing animal publications.
I will return any unused manuscripts. Please include a SASE with your submission and I do my best to report back in 1-2 months. I hope this answers all of your questions.
Thank you for thinking of I Love Cats.
Sincerely,
Lisa M. Allmendinger

getting on this newsgroup was the first time i ever heard of any hams
complaining about what transpires on 11 meters...99.9% of hams i bet
could care less about what is going on , on 11 meters....

That is changing as you write because the nature of the problem is
changing as well. With the increasing use of so-called 'export radios',
and PLL modified CB rigs, Hams are increasingly discovering CB
communications taking place on the Ham bands. As long as the idea
remains that it's OK to transmit where ever the radio can there is going
to be problems.

"In the first place, that idea is no more prevalent among cbers than it
is nocode hammies who mod their rigs for eleven meter."

Some of the individuals on this news group could care less who they
interfere with while on the air doing their thing.

"Are you speaking strictly of power users? Out of banders? Anyone that
doesn't conform to the letter of the law? Anyone that doesn't agree with
you?"

I a frequency does not seem to me immediately in use they simply steal
the use of that frequency and thus denies the rightful party's ability
to use their own frequency, in the manner the need, and at any time they
choose to use it.

"This isn't a problem anywhere, save for among a few of you in this
group using it as a catalyst for something that simply isn't there.
Sparky was going to face off with this and realized he really knew
nothing of the freqs that are considered the freeband, and aptly
demonstrated such. He at least had the good sense to back off the
subject after learning about the empty freqs. and how wrong he really
was."

So the 11m problem is like a weed,
it's necessary to pull it out by the roots to get rid of it.

"We know how you must feel. Day after day, night after night, month
after month, crying, whining, hoping, praying, that the horrible cbers
will be taken care of. Extreme frustration over such mundane matters
appears to be a precursor to bipolarity."

In the case of 11m the appears to involve getting enforcement action taken on rule violations, and point out to others lurking on the side that activity is being monitored. The really sad part is the whole mess could be cleaned up by CBers themselves,

"As no doubt could the hammies."

however there is general lack of interest to do it,

"As among the hammies."

and there is a group who is VERY interested that it stays a mess.

"As among the hammies."

So once the garbage starts spilling over the line,

"I agree. Here you are in a cb room and self admitted you don't even use it. One may say you "spilled" over. I maintain you were exiled here for your charming manners to the hammies. Maybe they just never accepted you."

for others to content with, there is no reason to stop at the dividing line, but may as well continue all the way to the source to ensure the problem does not come back too soon if ever.

"They are at the source now. They have been at the source since Riley entered the pic. Hammies like yourself are the source."

guys and some of the old heads, and they could care less about
it.....getting on this newsgroup was the first time i ever heard of
any hams complaining about what transpires on 11 meters...99.9% of hams
i bet could care less about what is going on , on 11 meters....
As probably the senior graybeard, in license time if not age (57), you
are close but not entirely correct. Lets take it in levels and issues.
There is a tendency among newer amateurs, and this predates CB, to
bronze Part 97 and worship it like a golden bullock. We have some who
seem to take the same viewpoint toward Part 95 as some take to the King
James Bible. <snip>

I want to clear up something here:
For many years I have been using CB radio to chat with friends around
the neighborhood, communicate on camping trips, get road info for
driving over the passes, and a lot of things that CB radio is good for,
and is perfectly legal. But at least once a day

"Once a day? Gee, and to think this type thing could never happen on 2
meter."

there comes along some idiot that thinks it's the end-all-beat-all of
human existance to jam the band across the whole town.

"What about the idiot that thinks he controls the freq?"

Several years ago it was annoying, but now they have these amplifier
circle-jerks and it makes the band all but useless for any kind of
decent, regular, legal communications.

"Yep it sure does, and to think that everyone you listen to on 2 meter
is licensed."

Even some of the truckers turn off their radios until they get well past
the city limits.

"They don't turn it off. They flip the switch and freeband."

So I found rrcb and lurked for a while.

"You don;t really expect anyone to believe that, do you? You can't lurk anywhere. You have a compulsion, you must make your view known. No, you did no lurking."

What I had was an awakening to the attitudes of these 'keyclowns': they have a total disregard for civilized behavior,

"Here comes your morality BS. Hypocrite."

a deep-seated aggression against any kind of authority,

"And the plagiarizing of my psychologist friend. At east you are paying attention. The again, I need not point out to anyone that when I speak you are helpless."

and a spoiled contempt for society in general.

"That is interesting and ironic. Ironic, because you just described your disdain and attitude for anyone that ever disagreed with you on any subject. Interesting, because it is somewhat sad, you describe your self to a "T" while attempting to color someone elses world."

These attitudes became clear to me when I began to voice my opinions about illegal ops, then started receiving flames and threats in my email.

"Oh, yea..the threats. About as authentic as the rest of the BS you ply. Repeating a lie or forge doesn't make it any more true."

Look Dick, I don't "worship" part 95, or any other laws, like you suggest. I'm just another guy that likes CB radio, and I like it for what it once was, and for what it should be,

"OMG>>ROFLMFAO..for what it should be? Are you serious? You gonna change the world of radio..Sparky the Savior..LMAO..this always was your problem..it isn't your idealic vision of what it should be, so you gonna mess it up however you can. Your power struggle issues, coupled with your deep rooted grief and lack of control over all that you dislike has turned you into a deeply, disturbed, grandiose ranting lunatic."

not for the eletronic testosterone bouts that dominate the band today. I want to see it become a decent band once again, and I am willing to take actions toward that goal.

"And what have you done in the last 2 years since you began embarassing yourself?"

If that means annoying the hell out of these malcontents, then that's what I will do.

"Bingo. I had you pegged since the first day you showed your skirt."

Since you have stated that you don't care about the band, then killfile me and stay out of it. I respect your opinions, but don't second-guess

mine.

"Course not. We all know what happens when someone questions you. Google galore."

Yup, I just got me another bite on my trolling line!

news:<tt8ltfg9iuglbc@corp.supernews.com>... Okay, nobody has yet to
explain what all this stuff about flying saucers and saucer men is
about. How did this start - did I miss something? Yep. In a post a few
months ago, Twistedhed claimed he has hung a used jockstrap above the
fireplace mantle, and that the "saucer men" talk to him. He also claims
to be a well-published journalist, proudly admits to beating his dogs,
thinks it's legal to shoot and kill anyone that steps on his land, and
will gladly give you instructions on how to steal some real-estate for
yourself. You figure it out.

"You sound as mad as Lelnad."

Mad? Oh, no my perverted buddy, not mad.

"You can't even lie anymore, Sparky. You're used up, bub, old hat,
yesterday's news, exposed beyond recognition. You can't even get your
first sentence out without name calling...hehe..yes, you are mad. Carry
on, though....."

I'm highly amused. The more you post the more I laugh.

"Great. I am glad to offer you a smile during your long, grief filled
days that you misdirect toward the group."

You should really publish all your posts,

"Why should I do that? Because you fail so miserably at it? They are all
there for your enjoyment in the archives."

because if laughter is the best medicine, I think you found a cure for
the common cold!

"Yea, but your ailments aren't the common cold."

Yup, I just got me another bite on my trolling line!

Tell us, what type antennas and rotor do you plan using?

How about some photos, with the lightening bolts emanating from the
driven element? A over the top view showing all the dead birds lying
just under the antenna.

Jay in the Mojave

What do you want ..... I want Rock & Roll

I agree. I spent my time putting together a LOWFer station back in High
School as my
final exam project in electronics class. While everyone else was using 555
or 556 timers to
make stupid little fart noises or beeps, etc., I built a working transmitter
and QSL'ed almost
the 11 western states. It was a blast. Found out interesting things, too,
like black PVC is
about useless at RF, since it has something in the paint that screws up
inductance calculations
pretty bad.

So, I guess I can say Been their, done that. It is fun, though. I just
prefer building high power
amplifiers now. Nothing different, except the power levels.

>

>

It can be a blast. When you really want to get down to it, build a couple
single or dual tube
transmitters. Pain in the butt, but it is nice to have your filaments light
your logbook rather than

a lightbulb :)

Nobody has argued against that.

You guys are so quick to jump the proverbial CBers ass, that you don't realize what
your saying, nor that I have agreed with you.

My statement was, and still is, that if your sitting side by side in a mobile, with the same antenna
systems, the guy with more watts is going to win the competition.

Bottom line.

Well, then someone should smack the shit outta them, and I truly hope
that local law enforcement takes care of their drunken activity. One thing
I can't stand is an alcoholic. They are worst than most other drug abusing
types, since they view their vice as "legal", it can't be as bad as anything
else,
and it makes their attitude worse.

You can hear them, and see them as you drive around town,
> every night of the week (drunk as a skunk and talking trash on the CB).

Hopefully they don't kill anyone.

Of course, in Texas, they will die anyway... We aren't afraid to flip the
switch
on deserving sons-of-bitches.

No, you shouldn't be. Just because someone enjoys something you don't
doesn't make them the idiot, though.

Your lack of comprehension in the fact that someone else could actually like
doing something you find no enjoyment makes you one, however.

lol

I know Tim personally, have met him, and consider him a friend.

You have never met him, and know him from nothing but a newsgroup.

You believe EVERYTHING you see on the internet.

I also retract my statement about him not owning an amp. I just remembered
he did pick one up while I was away from the newsgroup.

However, Yeah, I do consider myself his guardian angel. Jealous?

The coax on these antennas is NOT CHEAP ! It is GOOD COAX, 95% shielded.
Thicker and 18' coax IS a waste unless you need it!

Hello Dave: Yep its cheap-Oh stuff, I wouldn't use the cheap coax that comes with the Wilson or K40 to wrap trash up with!

Dave go ahead and buy some of the expensive RG142 coax and replace the coax that comes with the Wilson 5000 antenna, now you got something. Also fill in the gap with RTV, and then tell me what you think!

I have seen the true nut cake, gun ho dudes use RG393, and have quarter wavelength wires connected to the base plate of the antenna, and routed over the vehicle. Wonder if that really works? What does it do to the SWR, Might be a improvement to rejecting vehicle noise. Must try! Now ya got me going.

Jay in the Mojave

What do you want ..... I want Rock & Roll

SD,

Well, there is a group of people, particularly the ficticious character called Aaron Voobner, that comes in with insults, rules quoting and just plain flames. I don't do that. I will post my own opinions, but I don't do so in a confrontational manner. The "nudging" comment is just a figure of speech that came about as a result of our freebanding thread.

I don't really care about what goes on within the legal 40, but if you have followed this lengthy thread, I DO care about "freebanders" who intrude onto frequencies for which I hold license, and those who intrude onto 10 meters. I don't get involved with the 27.555 folks--that's between them and the law. What I AM seeing is an increase in enforcement activity against amps and "freebanding"--particularly the trucks on 10 meters and even some companies who have used 2 meter gear for a "company" channel. It will take some time for all this to get into full swing, but all indications are, it's coming.

And that's what we've been debating.

2815. Class A RF Amplifer Q&A

Newsgroup: rec.radio.cb
Date: 2001-10-24 16:03:58 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3BD6E66E.7AC399D7@qnet.com>
Source record: 101777

Hello All:

Local talk on the radio about using class A to reproduce a clean, loud and clear AM & SSB signal.

Knowing full well that the amplifier will not be as efficient as class AB, or B, or even C, but the goal is to have a very good linearity with the least distortion, type of thing, at the cost of efficiency.

Is biasing a pair of transistors in the usually broad band technique fisable, for class A? I am thinking the that the transistors will half to be biased to on, in the class A bias region, when the PTT or key down signal is turned on, and removed for receive.

Will the broad band circuit work, or will tuned input, output, and neutralization be required?

Jay in the Mojave

Please figure out the number of active amateurs, and the number of active
CBers.

Then look at the ratio. Its about the same, I would venture to guess.

We have millions upon millions of active CBers throughout the US

Hams have thousands. You do the math.

>
>
> > Denial is the worst form of vanity.
> > I agree that CB needs to be cleaned up,
>
>
> I agree. So why do you insist in endlessly downplaying the problems
> on the CB frequencies?

I'm not downplaying them at all. I am making a point, in that the amateur
community
constantly plays down the amateur problems, and points the finger at CB
radio.

You guys have thousands of operators, we have millions to contend with.

And yes, since their is no licensing structure, and CB is plug and play, any
idiot
can and does get on the radio. However, Cb radio still does, and ALWAYS
will have some decent operators. We escape to the freeband to get away
from the idiots.

Nice thing about Cb radio is you DON'T end up with the class structure that
is so prevelant within the amateur ranks, due inherently to its licensing
structure.

Not saying that is a bad thing, or a good thing. Just pointing it out.
Both services
have their problems and issues.

If the CB radio service wants respect, then it
> has to clean up the problems first. And that means honest CB'ers
> (those running legal stations and not causing problems) have to start
> screaming for enforcement and stop empowering those who do cause the

> radio newsgroup to a cross posted thread.

Noted. I don't look to where something is posted to make a reply, as I feel
it shouldn't make a difference. I speak my piece, and will defend it to
anyone.

However, I didn't see this was cross posted until you pointed it out.

Second, as long as I have a
> CB in my desk drawer (a handheld I use in the truck occasionally), I
> have just as much right to be in rec.radio.cb as you do.

I never said you did, and I don't believe a CB radio is a requirement to use
this forum, either.

And, finally,
> the problems in ham radio are not the same as those of CB - the
> problems associated with the CB radio service are much more severe and

> much more commonplace.

Because we have several hundred times more operators than the ARS.

Take a look. Your ranks are falling off. CBs are still sold every day.

Why can't the hams figure that out. Yes, CB is a mess. Yes, Amateur is a mess.

However, all the hams do is trash CB because we have more idiots, and it is more prevelant. We
have millions of operators crammed into a little portion of spectrum. You HONESTLY think
that if ALL of amateur radio was stuck in 75 and 80 meters in the US that the amateur community
wouldn't have the same problems the CB community does?

Pull your head out of the sand!

And it is the hams themselves who have
> requested the increased enforcement of ham radio, while no such
> widespread request has come for CB'ers (including yourself).

No, I'm not going to go crying to someone to please clean my band up.

The idiots come and go. Usually selling their butchered equipment to the next
moron that wants a radio because Jed has one in his truck / car / rv/ whatever
gave him his first taste of radio.

However, the idiots do go. And sometimes their equipment is sold to someone who
will clean it up, and use it respectably. I have quite a collection of piles - of - crap in
my garage that started out as trashy no limiter having tweeked to hell and back.

However, if the case is good, I will put the effort into turning it back into something
that is decent to operate.

But don't tell me that I haven't been a proponent of cleaning up CB. I don't agree
that linears and export radios are the root of all evil, I say run power if you want,
but run CLEAN power. THAT is the difference.

I suggest you research your claims about others before you go offhanded stating things
that you don't know about.... Especially about other people.

> violate the rules.

That totally depends on what area you are in.

When I was in Southern California, 2 meters was worse than 11 meters was,
and 11
meters was a MESS. CB shops would sell people 250 watt linears because
without
them they wouldn't be heard AT ALL.

Here in Texas, I find the opposite to be true. Most of the high power
operators are
decent, and have fun, but don't provoke, practice good neighbor policies,
and honestly
try to help people. I am honestly amazed at it, after being subjected to
other areas of
assanine attitudes.

However, I was shunned by the local amateurs during the MS150, when I walked
up,
HT in hand, and asked them what their call in frequency was during the bike
ride. I was
part of the Baker Hughes Bicycle chase team, and felt the need that I should
at least make
an attempt to help with the comms since I am also a LICENSE AMATEUR
operator.

They told me basically to go to hell. They also never knew I was a CBer.
They didn't need
me, nor did they want me.

About 3 hours later, I scanned the band, found their active call frequency,
and called in a DUI that
had run a couple bikes off the road. He was later apprehended, and the
bikers where safe, but shaken.

So don't you come and tell me their is no bad apples in amateur radio. It is one of the most
elitist groups of people to come around since the SS. I know. I am an amateur operator.

(however, I do also believe in not letting the idiots of the group keep me from enjoying my
hobby, so I didn't trash my amateur equipment at the time. I still use it, and still enjoy it.)

>
>
> > This would actually be fun to look
> > into, as I KNOW the amount of hams
> > is dwindling.
>
>
> And how would that compare to the slow decline of CB since it's peak
> in the seventies?

lol.

Take a look at sales. CB had a resurgance in the 80s, and again in the early 90s.

That comes from a CB Scene article in Popular Communications in the early 90s, when
they where saying CB was dead in another magazine.

CB comes and goes. It is probably on its way out, since computers and the internet have
not been flooded into everyones homes. However, I doubt that the hardcore hobbiests will
leave. It is too much fun.

>
>
> > Take a look at the big 3 ham mags.
> > All they can talk about is how it is a
> > dying hobby. Sad but true.
>
>
> At least there are hams magazines to talk about. Care to name a
> single magazine dedicated solely to CB still in existence?

The amount of manufacturers of CB radio has dwindled. That has meant the amount of advertisers has also.

That doesn't mean the service is dead.

Yes, ARS has its place.

However, you STILL CAN'T argue the fact that their are less amateur operators
than their are CBers.... No matter HOW you try and word it. Hell, even the

amateur magazines will admit to that!

Care to
> name one with anywhere near the same number of subscribers? Care to
> name one with the same level of technical coverage?

They can't put technical articles in CB magazines since they are illegal to
modify.

11 meter times and journal proved that point.

Or perhaps we
> should talk about books instead? Or perhaps you'd like to show me the
> CB radio organization with the scope and influence of the ARRL?

lol.

The ARRL is a joke. It has its good moments, but overall it is a joke.

A LOT of the amateur community agrees.

If
> you're going to use talk in a magazine as proof that a hobby is dead,
> then it should be very clear to you that CB was dead a long time ago.

Yup. And the sales of CB radios, amplifiers and antennas proves it, doesn't
it.

As well as the frequency and volume of posts to the CB radio UseNET group.

>
>
> > CB is growing more and more. Which
> > yes, means you get more idiots.

> > is what comes out of the rig, thats what
> > they run.
>
>
> Well, the last time I checked, it was legal to run 100 watts on the
> ham bands.

No, not if you are able to maintain communications at a lower power level.

But, regardless, your response avoids the subject of
> illegal power amplifiers (running more power than necessary is not an
> illegal power amplifier). So how does your comment about running more
> power than necessary dispute my comment about the use of illegal power
> amplifiers in the two radio services?

It doesn't, wasn't intended to, and you completely missed the point.

I was bringing up the fact that it is illegal to use more power than
necessary in the
amateur radio service. Amateurs run illegal. CBers run illegal. Fact of
life.

For that matter, I noticed your
> message avoids responding to most of my comments (the treatment of
> women, for example).

I treated it as the jibberish that it is. So basically, screw CB, since
their are people who are
profane, but amateur is OK, since you had to study to get a ticket, and have
to say your
better to make yourself with your elitist attitude LOOK better? At least
their are those
of us in both services that can get along with all, and DON'T have to make
themselves look
better, and OVERLOOK the fact that their OWN bands are dwindling due to lack
of use,
profane and flagrant abuse, etc. Both services have their problems. Your
attitude is "My service
is better, though, since we don't have as many troublemakers"... BULLSHIT.
You don't have
the number of users crammed into the same amount of spectrum, so you can't
even begin to
compare the two!

Most of the amateur community is a good lot, I will agree with that. Some
of the CB community
is a good lot. You probably WON'T agree with that, since your involvement
in CB seems
to be with idiots only.

Well, bud, you know what, you hang with idiots, thats what your going to
find. Sorry your use

of the CB radio was so bad.

Another ?.... If you hate CB so much, and think they are all a bunch of idiots, why did you
stay in it for 20 year?

I do operate within the legal CB band. I also operate in the freeband.

So because I operate in the freeband at times means I can't also operate in
the
CB freeband and NOT have an opinion about the legal band?

You have a messed up outlook on life if that is what you TRULY believe!

- the so called
> "freeband" is not a radio service, it is a violation of the rules of
> the CB radio service. So, by your own admission above, you're

lol.

Prozac misses the point entirely.

When you can look at a datasheet, figure out how to use the constant current curves, and figure out that plate current is a function of the amount of drive on the cathode / grid / fils / whatever, then you will see what I am talking about.

Until then, your just another dummy with a computer.

>We are not talking about comms, we are talking about a shootout competition.
>Listen during CQWW and you will find the same things on the amateur bands.

That's called a "pile up" and it's a recognized communication tool;
even the shipboard CW maritime operators utilized that technique for
some 80 years in order to pass their time-sensitive weather observations
every six hours. Don't attempt to equate your "shoot outs" with an 80+
year-old highly efficient communication method; that you'd even try
shows you have no understanding of basic single-channel mass comms.

>I can also win a keydown against the biggest amp you can
>find. It's easy. All you have to do is know how to communicate.

"Key-down" and "communication" are contradictory; doing one prohibits
the other from occurring.

I love the way the FCC quietly goes about its business subtly
collecting bits of evidence from here and there, maybe in your
neighborhood, maybe from a distant monitoring station, maybe
from on here, then jumps on the federal criminal with huges
fines and confiscation of communication equipment. From then
on other agencies such as the IRS join the fray and carefully
scrutinize this individual, who will for life have a federal
conviction on his record. Is all this worth it to you? It's so
easy to live a law-abiding life -- why not try it for a change?

No good reason why not although for the reasons you mention I have never seen this approach outside of direct coupled dc to lite audio amps for those to whom the best is marginal.

In theory at least, the tanks are essentially transformers; they do not have to store a shitpot of energy so tanks for AB operation should be a bit of overkill and proper C tanks nuclear war. The forward bias has to be at least half the peak to peak drive plus the 0.7 breakover and the bias plus the highest drive cannot exceed the device ratings. You may want to shift the bias point up a tad to keep the down cycles in the linear range of the device; same with the top end. Like any other bias, stiff is better.

As far as neutralization/unilateralization go, if it don't need it in AB, B, or C it won't need it in A. Being class A will not cause stability problems, quite the opposite.

Go ahead and build it. If nothing else, you will discover why AB and B are so popular.

Dick NBK

Aside from kind of using a drop forge to crack walnuts

That would be a contest as to whose receiver front end would be first to get trashed.

BTAIM, other things figure in also. Such as operator skill, mode, which band is being used, and location. I would put my money on a location close to the ocean and 100 watts, against a QTH several hundred miles inland and 1000 watts.

I recently dusted off a old Class A/B linear using a pair of 1446's, it is
not designed for SSB but
sounds beautiful on AM.
I too considered the RUMORED audio benefits of a true Class A linear, but i
cant justify the increased cost and lack of efficiency when i get rave
reviews from the Class A/B unit.
Just my 2 cents worth Jay.................

well like i have said before, you sure seem to worry about this kind
of stuff a lot and i find that difficult to understand considering you
have stated many times that you are not a ham....so i ask you, what
does it matter to a guy like you who according to your own words does
not use a radio???????......

well sideband think about it....he is so completely absorbed with 'legal' radio operations that he probably has tried to do something about it in his town or whatever and his efforts have met with incredulity and apathy, so he gets on the only medium he can to do what he does...and you know what, he probably already had been told to shutup by people half his age, that is the kicker,.............

I can talk all over the U.S. and Canada when conditions permit on a slightly
modified RCI2950,
barefoot (no linear). Big Power does not help with (sky wave propagation).
But it does with ground wave propagation, just listen to "papa smurf" down
in El Paso,Tx. at the
Petro advertising for the $10.oo R/T to Jaurez,Mx.
Since Freebanding utilizes sky wave propagation for DX contacts a linear is
useless.
Then again their are those people who cant wait their turn and just walk on
everybody with their
big power, but if the skip aint rollin you cant hear em anyway on (sky
wave).............

well richard, i don't freeband....usually hang out on 27.025, or
27.085 or 27.265 so don't hear anything out of the 11 meter band. also
i think it was a big mistake to lower the bar on examinations for ham
radio usage, etc......so don't you think it would be a good idea if
this freebanding issue is causing so much trouble that manufacturers
quit making it so easy to modify 10 meter rigs and etc....???

ps. by the way do you think bin voobner is a member of the Al Quaeda
network and was sent here to try and agitate.????

Krell still misses the point.

It is organized between classes that are compared by the amount of transistors in their final amp.

It is in a cordoned off area, with two lanes, similiar to the way a drag strip is arranged, via lanes.

They are both going to the same station, which has a tape recorder going, and the person who is heard over the other advances to the next round.

Their are no other variables, unless one is cheating.

Your entire argument is over something entirely different!

HAHAHAHAHAHAHAHA
Its a recognized communications nightmare today. Just look at the amount of
people
complaining about the contests in magazines, and the problems inherent with
them.

Not many people can get through when "the big guns" are operating.

Most also take up excessive bandwith, and actually USE that as a tool.

Nobody said CBers where any different, but your calling a pile-up a
communications tool
is simply amazing.

> even the shipboard CW maritime operators utilized that technique for
> some 80 years in order to pass their time-sensitive weather observations
> every six hours.

And they still do today? Doubtful.

The pile-up of yesteryear might have been helpful. Today it is a nuisance.
As are contests.

Don't attempt to equate your "shoot outs" with an 80+
> year-old highly efficient

When does the efficiency come into play? When the DX station is responding
and
some idiot is actually KEYING on him while doing so?

At least with CB shootouts our keydown period is on the order of 10 seconds.

communication method; that you'd even try
> shows you have no understanding of basic single-channel mass comms.

On CB shootouts, we aren't using single channel mass comms, and contesting
has
nothing to do with that today.

>
> >I can also win a keydown against the biggest amp you can
> >find. It's easy. All you have to do is know how to communicate.
>
> "Key-down" and "communication" are contradictory; doing one prohibits
> the other from occurring.

Yes, and having a contest going pretty much precludes me from using my
5 watt QRP rig (because I lost the finals in my TS440 while I am at sea
and that is all I can milk her for, while my ship is going down) to get
help.

Not saying it would be impossible, just a HELL of a lot harder.

>

Yes. 75 meters is becoming a joy to operate again.

From then
> on other agencies such as the IRS join the fray and carefully
> scrutinize this individual, who will for life have a federal
> conviction on his record.

Actually, that isn't true. After a statute of limitations, you can apply
for
your rights back, and have that felony removed or "stricken" from your
record.

Nice try, though. Wanna go another round full of half-truths?

Is all this worth it to you? It's so
> easy to live a law-abiding life -- why not try it for a change?

I have Jeff. And for the most part (aside from the occassional traffic
infraction or operating my radio in a way you don't see fit) I still do.

Early 90s Popular Communications magazine reporting that CB radio is on the upswing.

Sales figures and the reasoning for RCI (which is basically a CB radio company now... They found more sales in the CB category than they did in comm. or amateur market) to go to making legit CB radios, having owned a CB radio shop in a semi-rural area and watching the amount of people and diversity of them using their CB radios.

Not to mention listening to 11 meters during the band openings.

If I am lacking credibility in your eyes, then I am actually somewhat happy.

In another thread, you couldn't differentiate between someone sitting aside
from someone else in
two mobiles having a shootout and two fixed stations sitting in different
areas.

That's credibility?

That still doesn't explain where you came up with the "millions upon millions"
claim of active CBers. Did Pop Comm and RCI make this claim? Did they take a
poll? If so, what were the results? I seriously doubt that the number is in the
"millions" as you claim.

I would not even bother other than to play but be prepared to change it to AB if need be. If built right then stability is not a problem but if the design is not right or you cut corners on choking, feedback etc. etc. you will have a mess on your hands, it also will be a challenge if you try to incorporate a driver stage, this will defeat the purpose anyway unless you keep the drive down, remember that if you overdrive the amplifier the you will lose your clean signal you are after and quite possibly the linearity as well.
I would also recommend that your bias supply be regulated and adjustable. I also recommend that you do something to control thermal runaway, used matched transistors also. Now to assure a clean signal you will need a low pas filter, this can be easily built and a poor mans way of testing it is with an MFJ-259, you can put it in the same case as the amp or mount it external. Remember, do not cut corners.
I know that there will be some disagreements but this is what I have found (in the past) to work the best without pulling out too much of your hair.

I don't think that you can "hear" the difference of a class A over a REAL
class AB amplifier, you are right though about the efficiency though but hey
I would rather have a clean signal and run a bigger power supply to feed it
then I would to have a small power supply and a trashy amplifier.

Dear Aaron,
You have informed everybody who reads or looks at this newsgroup about the evils of High Power or other misbehavior, but may I suggest that a little extra effort be placed in merely observing.

Most people engaged in any activity which may construed as "illegal" usually don't appreciate the tip and only brings out the trolls on the NG.

One learns much by observing and and free talking persons in this newsgroup will tell much if left to their own devices. Be observant, listen more, talk less and observe.

FLAME Away, ASBESTOS SUIT INSTALED.

Martin N5PZJ

Yes, I know who I really am, Mr. Voobner and NG.

Now that you spoiled the fun of my post... ;-0~

Check out OSHA's POV on RF radiation. Then remember that the agency has
a history of being very lenient where exposure hazards are concerned.

To be fair Jerry, take another look. I "came in" with my pro-kegal CB opinions and was threatened, flamed, and insulted. I now return insult for insult.

>rules quoting

Why does this NG hate to see the rules -- but loves to talk about/give advice on/revel in violating them? That I will NEVER understand.

>and just plain flames.

If pro-legal CB opinions stir flames, the flames are not my responsibility.

>I don't do that. I will post my own opinions, but I don't do so in a
>confrontational manner.

In this case a "confrontational manner" means merely telling it like it is.

>I don't really care about what goes on within the legal 40

Well that's apparent. Many of the users who want to see the legal 40 become more than a cesspool resent your not caring. Your not caring supports the idiots who thrive in the cesspool. Because of such "I don't care" attitudes, "CB", is expanding out of the legal 40 and into other users territory, either by direct incursion or the splatter and spurs from multi-kilowatt amps.

Actually, their is an addendum to that (or another seperate area,
altogether.. Not sure atm) that deals with amplifiers created for sale, and
old , before that law went into effect.

In that case, it WOULD be legal to buy and/or sell it, but you must be sure
your selling to someone authorized for use on those frequencies.

Jay,

I kind of doubt that "radials" would do much--even in the noise area--on a mobile. I can't think of
which antenna it is, but you have probably seen those antennas that have little short "radials" coming
from just under the loading coil. About all that does is change the tuning by acting like a capacity
hat even underneath the coil. As to performance or noise reduction, I kinda doubt it.

Source record: 101881

jay,thanx for the response.....ive already installed a tx2 tailtwister rotator,and "my version" of the m-106c antenna.i had planned to build the "hornet-6",but opted instead to add 8 feet more to the hornet boom,and change the spacings to the maco 106c measurements!!! also utilized the maco gammas as im more familiar with how they adjust/behave.after assembly,i had to make one adjustment to the gammas....and ive got 1.5 swr and below,between 27.605-26.505. so i got lucky and ended up with great coverage of all the good side band and am skip frequencies. also this set-up looks like it will be very "tunable" well above and below its "resonant" points. oh by the way,its set up verticle and the only thing keeping it from becoming a 12 element (another set of 6) is im missing the u-bolts for the other set of hornet elements. the only problem im having at this point is that i cant carry on a q-so with out every body in the country trying to break in and talk to elpaso!!! (but you know .....i love it)
as you can tell im really satisfied with this rig!! sometimes you get lucky!!
anyway heres hoping to catch yah on the band.

mad dog....you are absolutely 100% correct. i cant tell you how many times ive heard people say"let me turn off my linear,and see if you can still hear me" 99 times out of 100, the guy is still blasting away because its all mother nature doing her thing! we pretty much have discovered this principle already,which is why weve traded the 1500 watter we used to run,for a six element beam on a forty foot tower.with ten watts people think im a "big strapper". im probably not bothering my neighbors either,and i dont have to sweat the fcc anymore.local commo is a different story! periodically, we get some of the local cucaraches from right across the river in mexico thinking they can run us off the home channel.thats when i point the beam directly at-em,turn the power up on my 2990 to 100 watts,and let fly.....hee heee....with in minutes theyre running for cover!!!! gotta love it.!!! love to spray-em with RF-RAID!!!! any way,if mother nature aint doin her thing......10,000 watts wont get you across 100 miles. if she is...turn it off...youll be surprised.

catch yah on the band. elpasogunslinger

Hi Stephen,

About 50 bucks. Add another $10 if it has sideband. There's a Tram Diamond 60 on ebay that wasn't snapped up immediately because it's a 23 channel rig. Even the collectors seem to have lost some interest in the older 23 channel rigs. I'm still looking for a mint Cobra 138XLR, preferably still new in the box. Impossible? The Tram is still new in the box. Best of luck to you though. Take care and 73.

2883. Re: Class A RF Amplifer Q&A

Newsgroup: rec.radio.cb
Date: 2001-10-24 23:42:08 UTC
From: Skipp <skipp@pilotNOSPAMPLEASE.ucdavis.edu>
Message-ID: <9r7jkg$t7i$4@woodrow.ucdavis.edu>
Source record: 101897

: Local talk on the radio about using class A to reproduce a clean, loud
: and clear AM & SSB signal.
: Knowing full well that the amplifier will not be as efficient as class
: AB, or B, or even C, but the goal is to have a very good linearity with
: the least distortion, type of thing, at the cost of efficiency.

It doesn't make sense to bother with anything but class AB (AB1 or AB2
with a tube circuit). Very good linearity is found in AB circuits... the
difference in IMD vs a Class A circuit is not worth the trouble. For the
most part, you could not detect an audible difference. You would also need
rather serious test equipment to measure the difference.

: Is biasing a pair of transistors in the usually broad band technique
: fisable, for class A? I am thinking the that the transistors will half
: to be biased to on, in the class A bias region, when the PTT or key down
: signal is turned on, and removed for receive.

Yes, but not with a classic two transistor "push pull" circuit layout.

: Will the broad band circuit work, or will tuned input, output, and
: neutralization be required?
: Jay in the Mojave

Everyone loves that Neutralization tag all the time. None of my
amplifiers, tube or transistor have Neutralization circuits. Most all
have degeneration or feedback in the circuit. Don't jump onto the
Neutralization band wagon with the other dance and sing crowd.

Broad band works as well as tuned input. Both have best type of circuit
layouts and methods for bias control. Some have capacity for various class
of service in the same design, some don't.

A class A amplifier would have to be designed as such and the best you can
hope for is about 30 to 40% max output for all the power delivered to the
device (input power). 100 watts of consumed power... 30 watts out...
Not a practical trade off...

cheers
skipp

Why not? If someone is an ocasional drinker, does that mean
he can't be introduced to people from AA? If someone is pro
gun, does that mean they can't meet people that are anti-gun?
Same goes for talkng about it over "Ham" bands" there is
nothing wrong, and is quite often discussed over the air.
You know you paint some sort of Saint hood over hams, most
are not any where near the extreme that you are. Most do not
go on to the cb newsgroup and troll like you are, so again
you are not acomplishing anything, you are just being as you
would like to labeled "TROLL"

2885. Re: Servicing a K-40 Baseload?

Newsgroup: rec.radio.cb
Date: 2001-10-24 23:48:00 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3BD75330.E487E691@qnet.com>
Source record: 101901

Hello Jerry:

No not those Mickey Mouse, goof ball, do nothing, typical CB crap things
that screw into a 3/8 fine thread.

The Wilson 5000 I saw had RG393 running to it, with 4 each wires that
where connected to the antennas base plate, where the shield of the coax
is connected to, the 4 each wires where 1/4 wavelength long, and where
not connected to the vehicles body, but run down the sides of the front
and rear window corners. This was a modified Wilson 5000.

Food for thought.

To be honest, MD, there is something else at work other than ground wave. True ground wave does not exist much above 3 or 4 MHz. What most will be experiencing when the band is not open (and high power helps) is scatter. Yep, even if the ionosphere does not reflect the wave, some of the signal gets 'scattered', much in the same method that you may not see a searchlight, but you can see its' beam heading up into the sky. This can provide communications for a hundred miles or so. Sporadic E can account for some other communications in the few hundred mile range (but in that case, low power will also get through). However, if the skip (either F layer or sporadic E) is not in, even 20,000 watts won't help once you are beyond scatter range.

> with a fat fine to pay while their gear ends up in a car crusher
> somewhere so it never gets back out there to be used illegally again.

While there are documented cases of fines, most FCC court cases
involve
higher profile cases of large companies. I would like you to post a
link, article anything that shows a cb using an unauthorized freq in
federal court, you cant they go before an FCC comission and plead
their case. A federal

court wouldn't begin to waste thier time listening to a case of such
insignificance.

Please do not take this wrong, while illegal use is illegal, spouting
off
simularities to real life crimes is absurd and doesn't even begin to
sway the mind of someone using unauthorized freqs.

Joe, a lot of my transmitters are such as you describe; I've built
them out of components taken from junked TV sets. There's no greater
thrill than making on-air contacts with gear you've built yourself
from scratch. My 40m VFO uses a variable capacitor taken from a TV
UHF tuner; I can park it on any 40m frequency and it will stay put
all day. Those variables are built like a brick.

Or is it Aaron = Sparky = Leland?

The writing style seems to match. The use of any particular
name must be linked to the amount of alcohol in him.

You can tell a lot about people by listening to them, or in
this case reading them. If you would just linger and listen
you could also make these determinations.

joxendi@bellsouth.net (Jerry Oxendine)
Toll,
It was because the hams themselves requested it. ARRL and individual
hams had become disgusted with the junk that was being carried on and
pressured FCC to do something about it.
It was at this time that Mr. Hollingsworth was promoted to Legal Counsel
for the Enforcement
Bureau. At the same time, there was another storm brewing out in
Wisconsin and in Michigan
from consumers being swamped/receivers paralyzed by illegal CB stations.
No need to rehash
the results of that

(I accidentally snipped out your comments) There can be no denying that
pressure
on Wisconsin and Michigan senators brought about the more or less useless
HR2346.

"Correct, but it just may take a long rest with ARS. Worst offenses take
priority, which is why they remain concentrated on hammies. If it was
just a select few, they would be finished."

WHOA! Worst offenses concentrated within ARS? I doubt that!
OTH, there will always be a few that will test the limits. I just cannot
find the huge amount of "offenses" you seem to attribute to ARS. I
can tune thru 8 bands, and the huge majority of hams are holding sensible,
legal QSOs. The few that do act like buttholes stick out and draw the most
adverse attention. By the same token, I can tune thru 40 channels on CB
and hear some of the most ridiculous goings-on--beeps, squeaks, farts, echo
(the use of which escapes me--hell-O-O-O-O-O-O-O!) and a host of other
useless activities that do nothing to enhance communications. Not to
mention
taking forever to say the word "yes"! LOL! Like, "10-4 thar, mercy me
thar,
ah know whutcha mean thar, shore thang thar, guaran-told ya thar, gr'et day
alive
thar, git back SQUEAK!" Add to that, at least one character keying up on
the
others or some kind of mechanical sound maker.

I still say that Mr. H is doing exactly as he said he would, and he only BEGAN
with the ARS because ARRL and individual hams petitioned FCC for policing, which, among the majority of Amateurs is most welcome and supported. I support
it, and I have no sympathy, nor patience, with foolish, childish, brain-challenged oper-
ators regardless of their affiliation. I will point out that when Mr. Hollingsworth started
out with the Rain Report, the enforcement issues were chock full and on a weekly basis.
After about a year, his reports now are every other week. Most of the enforcement actions
are club callsigns (too many), repeater coordination, failure to report for retesting (license
cancellation), and an occasional ham straying onto frequencies outside his privileges. Most of
the 14.313, 3898, and 3950 stuff was cleaned up last year. Those that continue to misbehave
will get theirs in due time. The point is the major part of the Amateur problems have been dealt
with--and will continue to be as they arise. As that happens, more and more non-Amateur issues
are getting reported--like the truck stop out west selling Galaxy 66s and 99Vs, the "Pretty Panties"
guy, the guy selling amp kits down in SC--yeah, they were ostensibly ham amps, but still illegal,
the fellow up in PA who was fined $17,000 for freebanding and using amps. He ignored his NAL,
and got into WORSE trouble. One of those fellows that believes that FCC has neither resources
nor inclination to go after 11 meter violations. To find these, just go right back to www.rainreport.com and click on "letters".

Now, you have me at a loss for the moment on the interference issue--I saw it somewhere. In the
meantime, I found the following item which is related:

The International Amateur Radio Union, Region 2, held its 14th General Assembly in Guatemala City, October 1-5. Twenty-one IARU member-societies from throughout the Americas were represented.

Heading the ARRL delegation was President Jim Haynie, W5JBP. He was assisted by First Vice President Joel Harrison, W5ZN, and staff members David Sumner, K1ZZ, Paul Rinaldo, W4RI, and Jon Siverling, WB3ERA.

Among other actions, the conference:

* Endorsed the objective of a worldwide allocation of at least 300 kHz for the amateur service at 7 MHz, while maintaining a 300-kHz allocation for Region 2 amateurs as "an essential and non-negotiable requirement." The conference emphasized that other objectives being sought by international broadcasters "should not be permitted to detract from reaching" these goals.

* Asked the IARU Administrative Council to study other ways to reduce interference from the users of CB radio equipment, particularly in the 10 and 12 meter bands.

* Urged Region 2 member-societies to support a coordinated approach to secondary allocations to the amateur service in the low-frequency bands 135.7-137.8 kHz and 160-190 kHz.

* Requested the Region 2 Executive Committee to study the possibility of an amateur allocation near 5 MHz, similar to the domestic allocation recently requested by the ARRL in the United States.

* Expressed appreciation for actions by the administration of Guatemala to preserve and improve the amateur allocation at 430-440 MHz.

* Expressed concern about unauthorized operation in the amateur VHF and UHF bands and encouraged member-societies to take appropriate action, particularly against continuing commercial interference to amateur satellite uplinks in the 2-meter band.

This goes on to mirror the complaints against the HF interference from Mexico.
As to whoever "wins" the debate about "freebanding", "abandoned" frequencies,
and whether FCC can or will do anything about it, only time will tell. All I can do
is tell you what I read and hear--some of it straight from RH himself. If none of it
happens, congratulations.

73
Jerry

> For once you actually made me laugh, hiding the special message for nosy
> Ba****ds like me to find.... LMAO.
> But don't get too excited Aaron, you're still on my "blocked senders" list.

The text below the picture changed slightly. The original paragraph says:

"The Voobner Organization maintains a formidable array of resources by sharing a common screen
name (aaronvoobner@my-deja.com) utilized by a staff of concerned individuals to post opinions
supporting legal CB. We also express our opinions to legislators, auction sites, equipment manufacturers, amateur radio organizations, law enforcement agencies and public officials."

The latest version says:

"The Voobner Organization is fabled to be a formidable array of resources (see
org chart above) maintained by a staff of concerned individuals to post opinions
supporting legal CB. However it is merely Aaron H. Voobner at work. I also
express my opinions to legislators, auction sites, equipment manufacturers,
amateur radio organizations, law enforcement agencies and public officials."

>Next troll, please.

No troll, Toll -- a lot of my transmitters were built from scratch
(see previous post). Homebrewing is another branch of amateur radio
just like contesting, DX, moon-bounce, satellites, meteor scatter,
long-delay-echo, ssb, am, fm, digital, cw, spread-spectrum, QRP, et
al. Just as not all 600 kilo-hams are contesters, neither are all
homebrewers. Yet there are contests open only to those utilizing
homebuilt equipment.

Diversity is what makes this hobby so great.

The amateur radio service is the only service permitted to build
its own equipment without having to go through the type-acceptance
process, and we're the only service permitted frequency agility
(non-channelization). Just those alone show the measure of trust
the government has in us.

Off base? Is it illegal to use a ham antenna on CB or is it
illegal to use a CB antenna on ham. Now I'm confused.

The Forum Features A Chat Room, Radio FAQ Data Base, QSL Roll Call.

The Forum also features categories such as, CB Radios, Export Radios, Amplifiers, Antennas, Scanner Radios, Short-wave Radios, Modifications, Vintage Antique Radios, Microphones, Mobile Audio & Video, Home & Auto Repair, Speed World, Off Roading, Hunting & Fishing, Backyard BBQ, Music, plus America Stands United, Business & Personal Web site Advertising, The World Of DX'ing, Product Failures, and much much more, so come take part today!

We have some of the leading minds when it comes to information and help in some of the Technical Forums like, The CB Doctor (Billy Ward), Peakaboo, The Defpom, Happy Hamer, just to name a few.

It has a bunch of great people already there and a bunch that are right here on this forum.

I would also like to invite anyone that has a good knowledge of Radio & Electronics to come and join to help with people and their questions.

To get to the forum just go to Lycos.com and do a search on "World Wide Radio Club" and you will have many links come up to be able to get to it. My provider does not allow links to be written in NewsGroup messages.

There are over 145 Registered members there already, so come on and check it out.

Hope to see you all there!

it's not just posted in here!!! if you would take the time to look around
you would see that it is posted in 2 other newsgroups. and the reason that i
advertised the antenna like that is because that is what it is....go to
solorcon.com and look up the a99 it is a 10/11 meter antenna

Was that the same CB magazine (published by the publisher of Popular Communications) that went under after just two years because of lack of sales?

it is not illegal to do any of that i can use or make anything that i want as long as i stay in the frequescy range that my licence class allows....that's the great thing about it!!! i can take a cb radio and modify it talk on 10 meters hell i can mod it to talk on 180 as long as i do not mass produce it and i talk on the designated frequencys. it is completely allowed by the fcc....welcome to amateur radio......and as for why i posted it in here.....because it works!! i sold it this evening to a person in central newyork who saw the posting on this newsgroup......thanks aaron for drawing so much attention to my posts....it always helps them sell!!!

How would you know? Anyone can claim anything if proof is not
required. Heck, I can claim that I personally built the space station
as long as I don't have to provide proof of that. Of course, you would
certainly doubt that claim, just like I doubt Toll's claim.

That sentence is not clear, so let me get this straight. You
actually operate legally in the CB band, or you occasionally operate
illegally on the authorized CB frequencies?

Agreed. And we all know those contest generate as much magazine
space as the CQWW, etc.

My point is only that both services have useless competitions (in
my eyes)... However, they can be fun.

>

That is inherent.

Although, I have sat and watched most, and the guy who USUALLY wins (read this as, either
has something good as a rep, or is usually running an 8 pill into a 2 pill) takes the same lanes as
the other guys winning.

When talking about RF, the lane choice isn't as distinct an advantage as it is in drag racing.

Some people just don't understand that, though.

> to us, you have neither of the above.

You miss the point. I don't care about credibility from my "credentials",
I would much rather have the credibility from being able to shred someones
technically incorrect answers and show them the error in their thinking.

Just like someone putting PHD behind their name does nothing for
me to lend credibility to them.

After all, Clinton got to put President in FRONT of his name. Look
at his credibility. If you only choose to look at ones initials / title /
etc
for credibility, you either don't know the subject well enough to formulate
your own opinions, or don't have enough self confidence to do so.

Either way, it's unfortunate.

Besides, the few people that I DO trust DO have my call sign, and have
stepped forward to show people that yes I DO hold a valid amateur
license.

Great. Someone actually admitting they are doing nothing but flaming.

We figured you for a flamer, but flagrantly flaming seems a bit much

ESPECIALLY for a LICENSED AMATEUR.

God knows they don't do THAT!

I try to think about Voobsie as little as possible, another advantage of age: you get good at ignoring.

I can think of nothing as salutory short of a tactical nuke at the factory as a shipload of hardware rusting at the dock because US Customs won't let it in.

For the benefit of those who have never suffered with AOL: (grin)

AOL pretty much forces folks to adopt multiple screen names.

(1) Certain brands of computers come with a free year of AOL. If you don't activate it, you don't get the "discount" on the otherwise over-priced computer.

You can't use your original screen name on the new computer, without jumping through lots of hoops. Either you install AOL twice, or you use GUEST, which does not give you full access. The easy way to handle it is to have one screen name at home, one at work, and one on the lap top.

(2) AOL doesn't do a good job of sorting messages into folders, like Outlook does. The easy solution is to use one screen name for business, one for personal/family, one for hobby, etc.

I suppose that's why AOL lets you have 6, 7 or 8 names.

The person in question always uses AOL. Posts agree in content/viewpoint. Everybody seems to know who this is. (Ham call letters appear at regular intervals, and many say they have met him in person or talked to him over the airwaves).

Other than being a hambo in a cb discussion group, I don't think you're dealing with a serious troll.

Just my 2-cents worth, and back quiet.

Road Kill

NO 'GATOR-MAKERS ON THE FRONT AXLE!

Peek raises a good point, the amp is more linear than the rig driving it.

This is all good but why don't we just slap us some 1500 watt amplifiers
together to use on 2 meter FM, gotta love that class C, simple and
efficient.

Not to start a riot but actually to learn something, do we mean the same thing by neutralization? In its simplest form, a triode, there is an implicit capacitance grid to plate that couples some of the output back to the input regeneratively - in phase. The cure was to match that capacitance but route it to the opposite side of the input tank, simply bucking them against each other. Neutralization in its simplest form.

But the feedback from the neutralization cap is degenerative feedback. Aren't we basically describing the same thing??

I agree, if it is a true AB design and not over-driven then this is the way
to go!!

I agree, I have never had any problems without neutralization.

Not to mention the trouble he may have to deal with in getting the class A circuit to work. I have done it by accident before and could not figure out why the thing was drawing so much current. It was also very unstable but at that point I had no negative feedback on the amplifier so I could realy see how close it was to going into oscillation, I was experimenting but soon figured out that AB with a regulated bias supply was the to go.

Yeah Toll,
These sidewalk Perry Mason's don't know
anything. It is not a felony to violate most
FCC rules. If you notice they can only fine
you, not one mention of jail time, how come
Perry? Maybe you can ask Della Street or
Paul Drake for the answer.
Actually, it is a misdemeanor or a felony,
a criminal offense in every state of the union.

Landshark
PS. Watch as he comes back with some sort of
sexual innuendo or insult, he can't debate or discuss
an issue when cornered with the truth.

Hi group. I am selling a 16-pill amp and 2 driving 4 setup. Both units
are in really good condition and have excellent cooling. I have had the units
on a 14v system for around 3-4 months. At 14v these pieces will produce
2300-2500 bird rms watts with good "key time". I am told also that with a good
charging system at 18v this setup will produce around 3500 watts but I have not
experienced this myself.
I am selling this setup, BOTH units, for $1400.00+ship. The units will
be very professionaly packaged to protect them from our wonderful shipping
services. If you have any questions about this unit i will respond only via
e-mail.

Thanks,
Bill

Hey, the only reason I'm asking is because you say over and over that
you are a licensed ham. You also say over and over that you break FCC
rules and dont care who knows it. I thought you'd be HAPPY to give
your call out. My mistake.

Never mind. :)

Homebrew, QRP, and other contests serve a purpose for many of the hams involved; practice for those times when emergency communications are needed, and power is hard to come by, or equipment has been damaged and repairs must be made with what is on hand.

Hi SSB.

Have you ever heard of a Ham refusing to take a CBers money??

Who will pay the most for an old 101, 901, etc.... An amateur who knows it's well old and parts may be hard to get, or a CBer who thinks it's a s**t hot piece of tackle?

All those who stereotype CBers and Hams as criminals and saints, should consider this question:
Q: Who sells the equipment to the CBers??
A: The Hams, and the shops run by them do.

I have a copy of the details of how to convert a certain well known Amateur radio to operate on CB. The details are that specific - conversion for CB use. So here's another question for the "AKCs":
Q: Where did the information originate from?
A: It was faxed from the manufacturer to an owner.

By spreading conversion info, they are increasing their possible market to include CBers. Some "Amateur radios" are obviously aimed at the CB market.

I see a pattern forming here.
So I wonder why the UK goverment lifted the ban on single band 10 Metre radios that were being sold "under the counter" without the tax? Why do they not ban the 10 Metre amps that are being sold (in CB shops) legally with 17.5% tax on?

Six of one, half a dozen of the other, and even the "tax man" has a stake in it. So we can forget the "typical illegal CBer" c**p, there are others who are screwing the law just to line their own pockets.... and they are not CBers.
But then they haven't got a rampant Viking on their case.

I would bet that even some tooth fairies take a "cut" before they put the money under the pillow. This would explain why one child gets more for their tooth than another child does.

Regards,

Brainbuster.

> if keydowns are about pure power why dont the guys run fm instead of am?
>

Hi Tim.

I am not sure how your "keydowns" work, or what the purpose is but...

If you use a dead key, then there is no difference. Without modulation it is neither AM or FM.
As the power is not modulated on FM, the dead key RF output can be higher on some multimodes when switched to FM than for AM. This can give a slight advantage.

If the purpose is to see who can get their audio signal furthest, and whistling, etc. is allowed... then SSB is best, followed by AM.
With FM, your mod will disappear into the noise at great distance, where an AM or SSB receiver would still pick up your signal.

The main advantages of FM tranceivers are:
NOISE IMMUNITY: Noise blankers become obsolite.
EMC: With FM, your audio will not "break through" on stereo systems etc.
CONSTANT AUDIO LEVEL: Your outgoing audio will sound virtually the same level no matter how far away you are. As signals get weaker, the noise level increases, until it drowns out the received audio.

These would probably not help at a "keydown".

An important issue with FM is that increasing modulation does NOT increase distance. Increasing mod increases the power in the sidefrequencies. As the total power is constant, this means that your carrier starts to disappear, and distortion will occur. It is common in the UK to see the rx needle "dance" with overdeviation, although their ouput power is a consant 4 watts.

Another problem is that the sidefrequencies created soon start to knock out adjacent channels.

If the purpose of the "keydown" is to see who can cook the turkey on their car roof the quickest then...
1. Put the turkey on the back seat,
2. Put the antenna inside the vehicle,
3. Feed the mic lead through a small gap in the car window
4. Get your missus to stand keying the mic, while you go for a few cool beers.

Remember to fit rotating seats in time for next years "keydown", so the turkey will cook more evenly.

Does any of this help?

Brainbuster.

Last time the power went out, I decided to have some fun with it, and
built a crystal set from scavenged bits of old radios, and a tuning
cap made from foil covered paper towel tubes. The only part I had to
pull from one of my other sets was the earphone. All done in just a
bit over an hour, facilitated by a butane soldering iron.

Of course, having two clear-channel stations (WBAP and KRLD) within
20mi makes crystal set building a bit more tolerant of inefficiency.

Toll Free <tollfree@bigradios.com> wrote:
>Its a recognized communications nightmare today. Just look at the amount of
>people
>complaining about the contests in magazines, and the problems inherent with
>them.

Out of 600,000 hams, how many complaints have you counted? 600? That would be 0.1% of all hams -- statistically negligible. Even if 6000 complained, that would only be 1%.

>Not many people can get through when "the big guns" are operating.

Even if there was a contest every weekend, that's only 28% of the week; but note that the WARC bands are always contest-free.

>Most also take up excessive bandwith, and actually USE that as a tool.

Please quantify "most" and "excessive" and tell us how your arrived at those conclusions.

>Nobody said CBers where any different, but your calling a pile-up a
>communications tool is simply amazing.

You say that because you've never participated in one. I have -- the maritime bands had a world-wide pile-up every six hours for some 80+ years as ships passed their time-sensitive weather observations to shore stations. No other communication technique would have worked as well; after just 20 minutes every ship in the world had passed their WX OBS. Again, this was done every six hours for over 80 years, non-stop.

>The pile-up of yesteryear might have been helpful. Today it is a
>nuisance. As are contests.

So we'll group you with the less than 1% of the amateur community who think likewise -- similar to that uncompetitive group who tend not to get very far in life, always being passed up for promotions and pay raises -- too timid to compete with others. But keep in mind that contesters and traffic handlers make the best HF operators during disaster communications.

>Yes, and having a contest going pretty much precludes me from using
>my 5 watt QRP rig

Nonsense -- there are never contests held on the WARC bands. Never. And no matter what the contest, no one band is completely filled band-edge to band-edge. Also you can always find room on 10, 15,

or 160 meters.

Yes we are. See below.

>>and we're the only service permitted frequency agility
>>(non-channelization).

>No, your not.
>I suggest you look at the 1750 meter license free band.

That's not a "service." 1750m is one of several frequency segments
set aside for Part 5 "intentional emissions" (such as garage door
openers and cordless phones) and "unintentional emissions" (computer
monitors, microwave ovens, et cetera). Hobbiests have utilized the
"intentional emissions" paragraph for comms, but no where in Part 5
will you see any mention of hobby communications; those hobbiests
fall in the same category as garage door openers. Again, Part 5
is not "service," as I specified in my paragraph above.

I suggest you read Title 47 CFR Part 5 -- the CFR collection should
be in any nearby college library.

In what state is it a felony to drive 45mph in a 30mph zone? And are
you saying that everyone (or even most people) do that? Or drive 90mph
in a 60mph zone?

You are reaching again, Toll.

I wouldn't say they sucked this year, they had a pretty darn good team.
The problem is that Lou has a habit of choking in the post-season. He
makes stupid decisions, like leaving in starters after 9 earned runs,
or not putting in lefties against lefties. A few seasons ago he even
had Randy pitch two days in a row. It almost leaves a fan to think that
he throws these games in the playoffs.

Nope, and we don't have rec.radio.amateur.swap, or rec.radio.frs.swap,
etc, etc. That's because we don't need it. Well, maybe YOU need it if
you can't understand the simple purpose of having r.r.swap in the first
place.

Hello Dick: Ok on the AB / B stuff.

I know the amp manufactures use a little feed back to neutralize or keep
the amp stable. Perhaps Neutralization is a word to be used with tubes
amps. Your explanation of the in the other post was quit well written in
my opinion.
But good point, is the negative feedback in the transistor amp, doing
the same thing as neutralization?

However using the drop forge to crack walnuts is bit much, at any
height, we tested it. Using the vice with the aluminum shavings whipped
clean works better.

Wreckless Driving.

DUI

DWI

There are three.

Nobody here is claiming to be a victim.

I was simply pointing out that you ADMITTED to flaming someone, or hassling them, and
we all know that a GOOD amateur radio operator WOULDN'T do that, especially in a world-wide forum.

If you can't handle being called out on what you are doing, I suggest you take a break
and find something else to do.

Or, pick up your ARRL manual, and read the Ham Creedo. YOUR certainly not following
it by admitting your hassling someone else!

Simple case of semantics. The phone is not Phone. Your point, as you wrote
it, was why
didn't I call my friends on THE PHONE, meaning a telephone.

I asked the same of you.

You came off with something nearly unrelated.

>
> You haven't proven me wrong--so your weak
> attempt to paint me into a corner won't work.

Your right Bill. So far, EVERYONE else that has written something
says your wrong, BUT BILL IS RIGHT.

Texts have been given, we told you where to look, but you STILL maintain
that your right.

Since your right, I would like to see where in some text it tells you to
remove
the limiter so you will sound louder, and have to ride the mic gain.

Until then, Bill, you WILL be wrong, as you ARE wrong.

>
> > Honestly, I expected more from you Bill. You didn't even try to defend
> > yourself this time.
>
> Defend what? Where is your quote?

Defend your statements that you are right. So far, you only tell people
that you are, and
provide no proof of that. So, your still wrong, as Billy Orr and the rest
of the radio
engineering circle would tend to agree with everyone standing on the OTHER
side
of the fence. You can provide NO proof of your statements, provide no
corroborating
evidence, and just personally attack someone when they say your wrong, and
have
the entire professional radio community agreeing with them.. Not to mention
other CB
techs!

>
> > At least admit when your wrong.
>
> You are the one who needs to learn how to do that.
> You talk the big shit, come back once, then hide.
> On top of that, you don't provide the info you promise
> to.

Come back once and then hide?

WTF did I do that. I actually HAVE a life away from my computer, and a girlfriend.

So I take a weekend away from this machine, and all of a sudden I am not here at all anymore?

Yes, I left this newsgroup because of bullshit EXACTLY like this, as well as the Aaronnites.

I might do it again.

I did still read it, and still fielded emails from people who asked questions of me, but didn't
post. Thats my prerogative, Bill.

>
> To people that are you're equal you're really just a
> has-been asshole.

lol.

A has been? Bill, I was doing this before you thought of it. And I STILL do.

So, when you can catch up, and play with the big boys, and not make stupid statements like Nobody in the professional circles use modulation limiters, then
you will be thought of as an equal.

Until then, your an "up and coming".

>
> > People will respect you more for it (Feel

> Or is it that you really never penetrate?

Sexual attacks are the sign that someone is fighting a losing battle.

Nice try Bill. I like how you "disappeared" for a couple days after you where
proven wrong.

Again, I ask you Bill Eitner, where in ANY professional magazine, text, or schematic
does it tell you to NOT run a modulation limiter.

Until you answer that, you wrong, and will be treated as such.

I'd like to hear some of the theory behind his point, too.. I do know that the radios I've heard that had the limiters pulled and the mic gain controls set properly sound cleaner to me on the air... But I'd like to hear a good theoretical explanation as to why this is so.

Not flaming you, Bill.. I'm just curious.

That's not necessarily true so far as FCC regulations go.. If you disagree with the rules, you aren't necessarily FOR breaking the rules... Some people might be wanting to effect change in the rules, which is an option that you and the AKC crew seem to choose to ignore.

Go online and see if you can find
the Marin Independent Journal or I think
it's called the Marin IJ. The CHP just did
an illegal traffic break and caught some
30 motorcycles. Two arrests and some
fifteen traffic violations, all classified as
criminal and must be present in court
with a lawyer.
Please cite where a Cb'er went to federal
court for violating part 95. I've known at
least 6 individuals that had NALS, one that
had an inspector knock on his van window.
Not a one ever went to federal court and only
one person had to appear at the FCC on Golden
Gate Ave in SF to show them his Uniden PC33
that the neighbors with lousy electronics complained
about.
I've know two people that got fined, both are idiots.
One keyed up a base station with a thousand watts
next door to KQED (public channel) the other lived
next door to PacBell's main facility. Those are the only
people I have ever known to be fined, and very little
compared to the $10,000 to $85,000 that you and
Voobsie cry about, $1,000 & $1,200. Those are
cheaper than a DUI now a days.

There sure was, I have one here, boxed as new. It is identical to the
original silver/grey model but it has 6 bands of 40 channels.
It says limited series on the box so don't know if they are still available.
The reason I asked is because our local CB store is selling the Grant
Classic, this made me wonder if the Jackson was still available as I
wouldn't mind getting hold of another one ;o)

Cheers

From: joxendi@bellsouth.net (Jerry Oxendine)
Toll,
It was because the hams themselves requested it. ARRL and individual
hams had become disgusted with the junk that was being carried on and
pressured FCC to do something about it.
It was at this time that Mr. Hollingsworth was promoted to Legal Counsel
for the Enforcement Bureau. At the same time, there was another storm
brewing out in Wisconsin and in Michigan from consumers being
swamped/receivers paralyzed by illegal CB stations. No need to rehash
the results of that
(I accidentally snipped out your comments)
There can be no denying that pressure
on Wisconsin and Michigan senators brought about the more or less
useless HR2346.

"What I alluded to was, even the city that spawned the birth of the bill
has done nothing in the way of cb enforcement. They didn't even enact
legislation allowing it, even though they are permitted to. Now if the
problem was as prevalent as you had claimed, media would have picked it
up, more local legislation would have been passed, and it would be a
priority, which it simply isn't."
Worst offenses take priority, which is why they remain concentrated on
hammies. If it was just a select few, they would be finished."

WHOA! Worst offenses concentrated within ARS? I doubt that!

"WEll, then simply count the number of offenders being notified by the
feds on a regular basis. The overwhelming majority are licensed ops, and
a bit more digging will reveal the majority of those to be nocodes. I am
surprised you thought otherwise."

been near the OTH, there will always be a few that will test the
limits. I just cannot find the huge amount of "offenses" you seem to
attribute to ARS.

"Well, that would be because you tend to imply many of these offenses
are not hams, when in fact, the majority are. I simply asked for some
type referral source to back what you say, because after you suggested a
visit to the rainreport, I did just that and it backs 100% what I have
been saying all along. The majority of enforcement actions are against

hams."

can tune thru 8 bands, and the huge majority of hams are holding
sensible, legal QSOs.

"Now let's jam all your hams together on 40 freqs and see how it
compares to cb. Considering the ratio, it is ironic you look to the cb
service for the origination of amateur problems."

The few that do act like buttholes stick out and draw the most adverse
attention. By the same token, I can tune thru 40 channels on CB and hear
some of the most ridiculous goings-on--beeps, squeaks, farts, echo (the
use of which escapes me--hell-O-O-O-O-O-O-O!) and a host of other
useless activities that do nothing to enhance communications.

"See above."

Not to mention
taking forever to say the word "yes"! LOL! Like, "10-4 thar, mercy me
thar,
ah know whutcha mean thar, shore thang thar, guaran-told ya thar, gr'et
day alive
thar, git back SQUEAK!"

"Why someone's topic choice or mode of vernacular would upset you, I can
not fathom. Most are not bothered by such mundane things. If you wanted
to play that card, I could bring up the old coots that have talked about
the same hip problems and Shingles for the last seven years, EACH night,
on the same exact freq. Even if you WERE offended by it, there are
several options, one is the channel knob, another is the "off" switch.
Beep's squeaks and echos, I may understand you taking issue with, but
the "slow" speech mannerisms which you took issue with serves only to
illustrate your personal preferences, which lends no credibility, nor
support to your ascertation, in fact, it detracts from it by allowing
your personal feelings cloud your judgement when discussing the
legalities of certain acts."

Add to that, at least one character keying up on
the
others or some kind of mechanical sound maker.

"Like a live, human repeater guard who thinks he's a sentry radio cop
and all transmissions must be approved by him? I know exactly what you
mean."

I still say that Mr. H is doing exactly as he said he would, and he only
BEGAN
with the ARS because ARRL and individual hams petitioned FCC for
policing, which, among the majority of Amateurs is most welcome and
supported.

"Cool beans, Jer, and I maintain it's hogwash. I believe he started
where the biggest problems are, your own back yard. After all, hams like

you have been clamoring for the same type assistance on cb since they made it license free."

I support it, and I have no sympathy, nor patience, with foolish, childish, brain-challenged operators regardless of their affiliation.

"Um, that is your prerogative, however, I feel so inclined as to point out, that being childish, brain-challenged, and foolish, no matter how annoying one may find another who displays these traits, is completely legal."

I will point out that when Mr. Hollingsworth started out with the Rain Report, the enforcement issues were chock full and on a weekly basis.

"Yup, of license holders."

After about a year, his reports now are every other week.

"Still, the majority are license holders."

Most of the enforcement actions are club callsigns (too many), repeater coordination, failure to report for retesting (license cancellation), and an occasional ham straying onto frequencies outside his privileges. Most of the 14.313, 3898, and 3950 stuff was cleaned up last year.

"And it came right back this year."

Those that continue to misbehave will get theirs in due time. The point is the major part of the Amateur problems have been dealt with--and will continue to be as they arise. As that happens, more and more non-Amateur issues are getting reported--like the truck stop out west selling Galaxy 66s and 99Vs, the "Pretty Panties" guy, the guy selling amp kits down in SC--yeah, they were ostensibly ham amps, but still illegal, the fellow up in PA who was fined $17,000 for freebanding and using amps. He ignored his NAL, and got into WORSE trouble. One of those fellows that believes that FCC has neither resources nor inclination to go after 11 meter violations.

"Well, Jer, that would be me, 'course I don't hold cbers that don't follow the DX rule in the same contempt as some of you do, nor do I view them as the dangerus criminal some of the banal minded and anal retentive do. Cause a problem and they will come. Simply barefoot DX in and around the legal 40, much to the chagrin of people that like to play radio cops, is not the felonious type activity many of you would imply

it is."

To find these, just go right back to www.rainreport.com and click on "letters".

"Again, I did check it out, and there has always been an unlicensed op or two that were causing problems and included in enforcement actions. Still, the majority of action continues to be the same, no matter how you spin it or what you call it."

Now, you have me at a loss for the moment on the interference issue--I saw it somewhere. In the
meantime, I found the following item which is related:
The International Amateur Radio Union, Region 2, held its 14th General Assembly in Guatemala City, October 1-5. Twenty-one IARU member-societies from throughout the Americas were represented. Heading the ARRL delegation was President Jim Haynie, W5JBP. He was assisted by First Vice President Joel Harrison, W5ZN, and staff members David Sumner, K1ZZ, Paul Rinaldo, W4RI, and Jon Siverling, WB3ERA. Among other actions, the conference:
* Endorsed the objective of a worldwide allocation of at least 300 kHz for the amateur service at 7 MHz, while maintaining a 300-kHz allocation for Region 2 amateurs as "an essential and non-negotiable requirement." The conference emphasized that other objectives being sought by international broadcasters "should not be permitted to detract from reaching" these goals.
* Asked the IARU Administrative Council to study other ways to reduce interference from the users of CB radio equipment, particularly in the 10 and 12 meter bands.
* Urged Region 2 member-societies to support a coordinated approach to secondary allocations to the amateur service in the low-frequency bands 135.7-137.8 kHz and 160-190 kHz.
* Requested the Region 2 Executive Committee to study the possibility of an amateur allocation near 5 MHz, similar to the domestic allocation recently requested by the ARRL in the United States.
* Expressed appreciation for actions by the administration of Guatemala to preserve and improve the amateur allocation at 430-440 MHz.
* Expressed concern about unauthorized operation in the amateur VHF and UHF bands and encouraged member-societies to take appropriate action, particularly against continuing commercial interference to amateur satellite uplinks in the 2-meter band.
This goes on to mirror the complaints against the HF interference from Mexico.

"That really didn't answer my question concerning the origin of complaints, nor the much-hyped-but-false allegations concerning emergency ops interference, but thanks just the same."

As to whoever "wins" the debate about "freebanding", "abandoned" frequencies,
and whether FCC can or will do anything about it, only time will tell.

"That was never my contention. Neither was a crosspost into the hammie forums, but I see after a year of begging me and forging me and trying to get so many cbers in the hammie rooms, the few cretin curs have succeeded in yet another attempt at pitting cbers against hammies. Some slight back tracing will reveal no surprises at the origin of the crossposts. You guys don't accept these nocodes or what? They feel disgruntled in your hammie rooms so they run to us and try to pit us against the hammies..if they spent half as much time learning code as they did trying to get us into debates with you and vice-versa, they might actually progress in the hobby, or in your own words, "do something to further the communications hobby."
I never questioned whether or not the feds CAN do something. I claimed they won't do anything concerning barefoot DX, including many vacant freqs between cb and 10. Straying into a hammie band is asking for trouble, and a different story, as is intentional operations causing a disturbance."

All I can do
is tell you what I read and hear--some of it straight from RH himself. If none of it
happens, congratulations.

"It's not like a personal victory as you make it sound, Jer. When you feed into this "us vs. them" mentality, it hurts everyone involved."

Source record: 102014

: Not to start a riot but actually to learn something, do we mean the same
: thing by neutralization?

No, not always...

: In its simplest form, a triode, there is an
: implicit capacitance grid to plate that couples some of the output back to
: the input regeneratively - in phase. The cure was to match that capacitance
: but route it to the opposite side of the input tank, simply bucking them
: against each other. Neutralization in its simplest form.

Most zero bias triode amplifier circuits should not require
neutralization. Degeneration is the placement of a few (10 ohm for the
a classic example) resistors in series with the applied RF. A bit more
drive, but a lot more linear.

: But the feedback from the neutralization cap is degenerative feedback.
: Aren't we basically describing the same thing??
: Dick N0BK

Degeneration can and is often done in other ways, with combinations of
resistors and possibly capacitors. It is also considered a slight
reduction in the "circuit gain." It does not involve feedback from the
anode to the input for the example I mention.

cheers

: Hello Skipp: So two transistors would have to be used in parallel?
: That make the impedance matching more fun.
: Jay in the Mojave

One is not limited to parallel or classic push pull. The real world should be the best bang for your buck. The classic best circuit for two or more transistors are to set them up in push pull (classic two transistor amplifier circuit, the one with the ferite material matching transformers on the input and output).
One then combines the push pull pair with other pairs in a combiner circuit and you get more and more power output for each properly added pair of boards/modules.

I have NEW slugs that will work in either the BIRD or COAXIAL DYNAMICS watt meters-following are for 2-30 MHz (contact me for other wattages and frequency ranges)

5KW-$150
10KW-$160
25KW-$170

Also have NEW meters made by Coaxial Dynamics which will read both PEP and "Bird Watt" - at the flick of a switch....These meters have a larger size meter than the Bird models-Made in USA -2 year warranty

These are EXCELLENT meters - $390

Please Email all serious inquiries

Thank You

How long was it..? :-)

: Why not use the two transistor push pull circuit?
: Jay in the Mojave

Most practical deal for a classic MRF-454 "bipolar style" type transistor.
If you can find a CMI or a Powermaster (two transistor ~150 watt
level) brand Amplifier, buy it. It's got one of the best working
push pull layouts I've ever seen. A solid circuit with included (and
should be required) low pass filtering. The original CMI Amp mfgr told me
he submitted one to the FCC (pre ban era) and it pass type Accep
requirements.

I have known a couple people that where fined big time, and a VERY small
amount of people who actually went to court.

Otherwise, getting busted driving wrecklessly is

A. More dangerous to public health
B. Carries a larger fine than you get with freebanding.

Toll_Free

You know with all these statements concerning "federal criminals"
I have to ask, what is a federal criminal? By the definition, a criminal
is one who has been found guilty in a court of law. So if someone
is to have been found guilty in a US district court of violating
federal law, then they would be a federal criminal. Not someone that
has admitted to or says they use, sell, distribute an amp or freeband.
so all this crying about people that freeband or use a foot warmer is just
that, the work of a troll trying to cause BS. If they truly believe that
the use of an amp, the use of unauthorized frequencies was such
a detriment to society, they would be working hand /hand with the
FCC to prevent such behavior. But they dont, they are here for nothing
more than the troll value alone.

Most of the hams I know don't engage in "drag racing." They're into racing thoroughbreds. :)

3033. Hams Showing Off Amp Theory To CBers

Newsgroup: rec.radio.cb
Date: 2001-10-25 20:02:00 UTC
From: voobner@yahoo.com
Message-ID: <fbc7a2.0110251201.5a8dfe82@posting.google.com>
Source record: 102044

Here we have a discussion being propagated by three HAMS about AMPS (which are forbidden by law to CBers) in a CB NEWSGROUP. Who could possibly benefit from that here? Go to a ham newsgroup and chat about it why doncha.

Oh but maybe is your intention to "elmer" the CBers. You should know that you are also being held up as an example. And the current example you are displaying is that FCC rules are to be laughed at. Nice job of "elmering" fellas. Way to go.

Good work! Now if you print out both versions and lay one over the
other on a light table the spaces between letters will spell out a
message that is the key to the whole magilla. Good luck.

And that is exactly the point. If the arguments, made here by the Pirate operator side of the fence, made any sense at all it most certainly would have been used in a court room to win a case against the FCC. Plus you would also assume they would not delay for a moment to stick it in your face to rub it in either.

Since no such court case(s) have ever surfaced here, or else where that I'm aware about, then it can be conclude that all of the silly excuses given by the Pirate CBers does not stand up under legal scrutiny. In other words the legal theories behind the idea of ownership of property in all it's forms, whether it's portable and securable for exclusive use or not, has not been not been invalidated by any of their silly excuses to date.

Check the FCC enforcement register if you like. Also you can contact Phil Kane in the 'rec.radio.amateur.policy' news group too. He worked for the FCC for a number of years, and has his share of busted Pirate CBer cases under his belt. You can it straight from the horse's mouth so to speak with him.

Why should the clean up of the CB 11m band have to be done at the expense of the Hams again who are operating legally, and has the right under Part 97 to freely modify their rigs. This is the same silly crap that has happen with the amplifier issue. If a Ham wants an amp for 10m, which we legally can own and operate, off the shelf you can't buy one here in the USA, not unless you screw around with a multi-band model to modify it after the fact. The issue is not how hard or easy the mod is, it's the fact the mod is required at all, all due to the prolific use of amplifiers on 11m. I would rather see 11m cleaned up at the expense of those who have turned it in to the current cesspool, i.e. CBers.

I chose to talk to them thru legal avenues, I don't break the law to talk to
my friends you on the other hand do because of some lame excuse "Because
they choose not to talk their, to escape the majority." You can do the same
thing on a telephone as the freeband.

>"In the first place, that idea is no more prevalent among cbers than it
>is nocode hammies who mod their rigs for eleven meter."

First of all you just assumed. Since nobody is going to ID themselves in any meaningful way there is no way to gage the magnitude. For all I know it could be Tim out there bootlegging my callsign. On the other hand demonstrating the incursions in to 10m is easy. Just tune to the low end of the band for any phone transmissions. Any you find with out a valid Ham call sign proves the point. Not only that but records are now being kept to get some hard numbers for the magnitude of the problem

>"Are you speaking strictly of power users? Out of banders? Anyone that
>doesn't conform to the letter of the law? Anyone that doesn't agree with
>you?"

That goes for any operator in or around the 11m band. They don't disagree with me they disagree with what Part 95 has to say. What they don't like is being reminded about it, and being referred to as criminals. The term criminal is commonly applied by the general public to those who frequently violate the law knowingly and fits the description of several people on this group including yourself.

>"This isn't a problem anywhere, save for among a few of you in this
>group using it as a catalyst for something that simply isn't there.

When I tune to 28.085 and there is a couple of truckers there talking in perfect North American English, with no ID, that's not a problem? I'm not talking about a once a year thing, or a month, or a week, but more like everyday. That's a problem.

>Sparky was going to face off with this and realized he really knew
>nothing of the freqs that are considered the freeband, and aptly
>demonstrated such. He at least had the good sense to back off the
>subject after learning about the empty freqs. and how wrong he really
>was."

I'll tell something about those so-called 'empty frequencies'. They are empty for a reason. They are called 'guard bands or frequencies'. They are there to add a bit of space between other frequencies that are in use to reduce interference. A perfect example is your TV set. For broadcast over the air stations do you find two local TV stations on adjacent channels? No you don't because the empty channels are there to help eliminate interference from one station with another at the viewer's TV set.

So the 11m problem is like a weed,
it's necessary to pull it out by the roots to get rid of it.

>"We know how you must feel. Day after day, night after night, month
>after month, crying, whining, hoping, praying, that the horrible cbers

>will be taken care of.

No but you spent much of your time digging through thousands of old usenet messages. Hasn't done you any good yet.

> Extreme frustration over such mundane matters
>appears to be a precursor to bipolarity."

You should at least research a new term that you start using to make sure you know what it means, and at least get the term right. It's called "bipolar". In your case I guess "bipolarity" you must be refering to yourself like "AC-DC". ;-))

>"As no doubt could the hammies."

No problem there. We WANT our bands cleaned up.

For CB however there is general lack of interest to do it,

>"As among the hammies."

You must be hanging out on another news group.

>and there is a group who is VERY interested that it stays a mess.

>"As among the hammies."

More like Twisted, Tim, Peakaboo, ...

>So once the garbage starts spilling over the line,

>"I agree.

I'm glad you do.

>Here you are in a cb room and self admitted you don't even use
>it.

I'll bet you have a strong opinion about abortion, but yet you can't get pregnant, and I'll also wager that never stopped you from voicing that opinion either. You're not a female but you feel perfectly entitled to tell a female what she can and can not do with her body right? So as long as you think you're entitled to stick you nose in to things that don't directly concern you others can do the same with the issue of their choice, and that includes CB radio.

Source record: 102068

Aaron,

Dadburn it, we ALL know the sale and use of amps on CB is illegal. We agree on that illegality.
But what I DON'T agree with is your attempts to suppress discussion of circuitry and theory--even
if it has to do with the differences between A, AB, and C amps. By your own methods of attempting to prevent (you cannot) said discussion, you could apply the same thing to two electronics engineers who have no interest in radio, but have the knowledge of amplifier technology
to intelligently discuss said subjects.

People have the right to discuss most ANY subject they choose--even amplifiers--on the newsgroup because no "crime" is commited via mere discussion. Said discussion has to be
APPLIED and USED for it to become illegal.. Now. IF I am hindered in my own efforts to
communicate by a "freebander" or a dirty CB amp, THEN I will take the appropriate measures
of asking the offender to stop, or reporting him to the Enforcement Bureau because it is at THAT
time that something illegal has taken place--but not before. IF I hear truckers on the nearby interstate operating on 10 meters, I "might" even follow him with a camera and a tape recorder and
turn him in. Because that is illegal-=-talking about operating on 10 meters without a license is not.
It might piss me off to hear somebody saying they are going to do that, but we have no leg to stand
on--until something illegal takes place.

Jerry

Hello Dick: I think it would be ok, if the transistors where matched and biased the same.

At least worth a try ah.

Having the amplifier or finial amplifier cleaner than the driver is attractive in my opinion.

Also this was brought to my attention, that in class A operation the negative feedback in a transistor amplifier, will be required, especially in class A operation.

Wheres my Motorola RF Transistor Manual when I need it, took everything out to the garage to paint and recarpet the radio room. Have to hit the aluminum tubing factory, but I'll be baaack.

Jay in the Mojave ... Pronounced Mo hovie, Vast American Desert, with bikers, truckers, and CB'ers, and low class restaurants. We love it.

Go ahead. Rush to defend "free speech" but miss the point entirely. Jerry's post wrongfully assumes I am trying to say his discussion is somehow "illegal".

First of all, nowhere did I say that discussion is "illegal" or that I was trying to prevent it. For the brain damaged among you, I'll repeat this again:

Discussion is not illegal.

If you read my initial post what I said was that a bunch of HAMS holding an amplifier discussion in a CB NEWSGROUP provides a bad example for CBers. I just don't understand WHY a group of HAMS feel the need to shoot the bull about the finer points of gear that CBers are prohibited from using. And do it in front of them, too. Talk about rude.

The trick is going to be to get the drive equal and exactly 180 out of phase, not a big deal in class B or the lower angle AB but it can be in A. As far as match and bias, you have the same problems in parallel. I would agree with Skipp's approach for combining but maintaining balance can be a bitch. Imbalance would show up as a distortion of the waveform so to the extent you cannot maintain balance you may hear it.

While you are at it if you go the push pull route leave the bases in jerk shove, tie the collectors together (Push-Push) and tune the output to six meters. Doubling the audio as well as the carrier would sound really wierd. I suspect you have a driver that would work at 25 or so.

Because it has not been issued by the FCC. Check out a callsign search engine, Hans.

> You sure sound like Leonard H. Anderson
> sometimes, giving vast pronouncements
> based on half-vast research.

No, I simply check out the facts before running my mouth, just like you should have checked that callsign before jumping on me. To be a valid ham radio callsign, it would have to be issued to that person by the FCC. That callsign was not.

There are hundreds of agencies besides the FCC which
are authorized by their governments to issue amateur
radio call signs.

An example of such an agency is:

Radiocommunications Agency,
Wyndham House,
189 Marsh Wall
London E14 9SX
England, UK
Tel: 020 7211 0211

> Check out a callsign search engine, Hans.

I did exactly that, Dwight, and it returned the
following information:

G4ZOW MR P DE CADENET
22 BEECHING CLOSE HARPENDEN
HERTFORDSHIRE, AL5 4LZ
ENGLAND, U.K.

> > You sure sound like Leonard H. Anderson

It certainly appears on the surface that you did a half-vast job
of checking out the facts.

Good luck on this one now.

With all kind wishes,

de Hans, K0HB

It is highly improbable that the FCC will ever issue a G prefix considering
that it is assigned to Great Britain.

We had been using N and A before the allocations began at the 1927
conference and simply added a dah to them for W and K. We donated half of A
to get Pakistan a non-British prefix in 1947 and it has since been used for
India, Spain, Australia, Argentina, Tonga, Bhutan, Liberia, and a great
shitpot of emirates on the Arabian Peninsula depending on the second
character.

The Brits got dah-dah (M), dah-dah-dit (G), and dah-dah-di-dit(Z) and V. So Z calls are spread over the old empire plus Albania, Brazil, and Paraguay, and recently Macedonia. V calls are spread over hell's half acre as well with Canada and Australia being the best known amateur ones.

Incidentally, the same allocations are used for tail numbers on airplanes, hence the N number on US aircraft.

Before WW2, Germany and Japan had D and J in their totality just as we have W, K, and N. Germany got to donate to recently independent South Korea and the Phillipines while Japan got to donate to Jordan, Norway, Indonesia, and Mongolia. Serves them right for losing, what?

It should be in your trusty Handbook; it is certainly in mine.

So the rest of the world cannot issue valid amateur licenses? Or must they be sure they are in American databases??

>"how it's done" You know that, right Aaron? :-)

Well then explain me this; there is so much MORE to the radio hobby
than amplifiers. Receivers, transmitters, filtering, keying, digital
modes PSK, RTTY, HELL, PACKET, propagation, VHF, UHF, HF, LF, power
supply design, suppressed carrier and sideband modes, audio
processing, QRP, CW, surface mount construction, repeaters,
mountaintopping, moonbounce, T-hunting, public service, etc. etc. etc.

How come all we EVER hear discussed among these ardent rec.radio.cb
"techno nerds" is.....AMPLIFIERS?

-Aaron-

IF you have read the Koran, you need to listen to 5070 on Shortwave this Sat. 8pm eastern time or Sunday @ 10pm to learn more about the Mooselims! WHO wants to be a millionair? Osama & Regis are! A lot of truth below--must sift through it more. Fornicates with Greenspan? Why didn't he go with Clinton? Andy Jackson called them VIPERS! 2 Chron. 7:14 IS the answer!
Dave!!!!!!!!!!!!!!!!

Apples to oranges again.

Drag racing depicts cars.

Throroughbreds are usually depicted as horses.

Nice try, though.

lol

So far, most of the hams doing the "shredding" can't figure out that I was talking about
mobile to mobile shootouts, and keep telling me about locations, etc.

So, why not take a stab at it Aaron? Because EVERY time you attempt it, I take you
down like the Red Baron?

Poor poor Aaron. Can't compete on a technical base, so he has to cheerlead while
some hams that can't comprehend normal English take up his fight for him.

It matters where it came from.

In a matter of a couple weeks, I can get a PHD from a diploma mill.

Does that classify me as an EE? Not likely.

People who blindly follow those who just have initials are morons.

Those who prove themselves technically will always win, in the end.

Source record: 102154

Hello PEAKABOO: Ok sounds great.

I have a two transistor amp that was thrown out in the trash, its will built, and all. But just the fuse was blown. I have removed all the components, and will be remounting everything with new transformers, and a regulated bias circuit, there's plenty of room. A new larger higher current capability relay found at the TRW swap meet will be installed.

And I have a large #77 or is it #73 torrid core for the output choking I'll use.

I have two great looking matching meters that I'll mount on the front face plate. One will indicate input voltage, and the other relative output power, with a string of Led's at the top of the face plate also indicating PEP output power, that ought to look catchy? I'll start out with a few white Led's, then green, then yellow, then red indication the max allowable output PEP.

This is all back burner science project stuff, unless it starts to rain, but it only rained twice last year hear in the Mojave Desert. Kind of nice to have all the dust washed off the truck.

But the FCC doesn't issue ham licenses in the UK. Some equivalent
UK government agency does that there.

Sorry, I didn't notice the guy's UK email address. I simply went off of his comment that he met Toll in Tyler a few years ago, which suggested he was here in the US. And that callsign is not a valid callsign here. A simple mistake, which I again apologize for.

I owe you an apology for saying that, Phil. As someone pointed out,
I didn't notice your UK email address when responding. I simply went
off your mention of Tyler and assumed you were here in the US. Sorry.

Open mouth, insert foot...

Thanks for the laugh, Dwight.
I guess that Cracker Jack is issuing
amateur tickets, in addition to
drivers licenses.

Haven't gotten a good laugh out of this group
in a while, but that's so sad, it's funny!

Gary, WG7X

Holy Smoke, Dwight!

Do you really believe that FCC is the only organization on earth to
issue amateur callsigns? Are you familiar with the prefix blocks used
by Great Britain?

I can't understand how you managed to get both of those brograns in your
yap at the same time.

Of course it's a valid callsign here.

Taking advantage of the CEPT agreement (and before that reciprocal operating agreements) G4ZOW could operate freely in the US, with the full blessing of the FCC.

And here I thought you'd "checked the facts" before you spoke, chiding me for not having done so. Tsk, tsk!

With all kind wishes,

de Hans, K0HB

I thought it was dadgummit, I can relate though Jerry, personally I believe
that if a guy is going to use an amplifier on the 11 meter band I would much
rather it be a clean linear as opposed to a trashy RF splatterbox amplifier.

It is true, have you ever had RF heartburn? It is bad news...It starts out small and then it works its way up to a larger carrier and then right when right when you think it is going away the damn stuff goes into parasitic oscillation, man that burns........

Not true, keep in mind that a linear will simply amplifie the input signal
so if you have trashy in then you will have trahy out.

That's because you're looking in the wrong place, Landshark. The Code of Federal Regulations...

http://www.access.gpo.gov/nara/cfr/cfr-table-search.html

...which contains Title 47 (the FCC regulations), does not cover criminal matters. To learn about criminal offenses, you need to look elsewhere. For example, the U.S. Code...

http://www4.law.cornell.edu/uscode/

...which establishes the FCC (and it's regulations), contains a number of provisions affecting radio and radio operators. A number of those include a criminal conviction, with "jail time," for a violation of that provision.

For example, U.S. Code, Title 18 (Crimes and Criminal Procedure), Part One (Crimes), Chapter 65 (Malicious Mischief), Section 1362 (Communication lines, stations or systems)...

http://www4.law.cornell.edu/uscode/18/ch65.html

...says...

Whoever willfully or maliciously injures
or destroys or attempts willfully or
maliciously to injure or destroy any of
the works, property, or material of any
radio, telegraph, telephone or cable,
line, station, or system, or other means
of communication, operated or controlled
by the United States, or used or intended
to be used for military or civil defense
functions of the United States, whether
constructed or in process of construction,
or willfully or maliciously interferes in
any way with the working or use of any
such line, or system, or willfully or
maliciously obstructs, hinders, or delays

the transmission of any communication over
any such line, or system, shall be fined
under this title or imprisoned not more
than ten years, or both.

The radio frequencies are a means of communication controlled by the United States. We, as individuals, are simply licensed to use those radio frequencies by a government agency. The part about "willfully or maliciously interferes" in any way with the use would cover freebanding (which interferes with the use of a frequency by the station authorized by the United States through the FCC).

But there is more. U.S. Code, Title 47 (Telegraphs, Telephones, and Radiotelegraphs), Chapter 5 (Wire or Radio Communications), Subchapter One (General Provisions)....

http://www4.law.cornell.edu/uscode/47/ch5.html

...establishes the FCC and it's regulations. Section 501 (General Penalty) of that Subchapter provides a blanket penalty for any violation of that code, including the FCC regulations established by that code. It says...

Any person who willfully and knowingly
does or causes or suffers to be done any
act, matter, or thing, in this chapter
prohibited or declared to be unlawful,
or who willfully and knowingly omits or
fails to do any act, matter, or thing in
this chapter required to be done, or
willfully and knowingly causes or suffers
such omission or failure, shall, upon
conviction thereof, be punished for such
offense, for which no penalty (other than
a forfeiture) is provided in this chapter,
by a fine of not more than $10,000 or by
imprisonment for a term not exceeding one
year, or both; except that any person,
having been once convicted of an offense
punishable under this section, who is
subsequently convicted of violating any
provision of this chapter punishable under
this section, shall be punished by a fine
of not more than $10,000 or by imprisonment
for a term not exceeding two years, or both.

Note that the fines above are based on a criminal conviction and are in addition to fines collected through forfeiture under FCC regulations. Also note that the provision above is only one example - there are a number of other provisions with penalties throughout that Subchapter.

It is rare for any radio related offense to ever reach the level of a criminal conviction - there is a long process (notification, forfeitures, etc) laid out in the FCC rules that has to be done first. But, as seen above, it is certainly possible for certain radio violations to eventually reach the level of a criminal conviction.

Whos he calling a CBer? I thought he once said that the reason he was mad
was because the CB was too trashy for him to operate on or hear on. I too
enjoy the CB but if I want to buy an HL-2200 and look at it then I have
broken no laws, if I choose to use it 3950 I have broken no laws, I do not
use it on the CB, that is the main thing. As a matter fact I have an amp
with a pair of 8877's in it sitting here that is built to solely run on 6
meters, it is collecting dust, I still have broken no laws.

Message-ID: <7r7C7.1085$hX3.96511@typhoon1.gnilink.net>
Source record: 102187

An HR2510 will get VERY loud. I don't know exactly HOW loud, because I never listened to myself transmit. But I will say this. The thing I liked best about my 2510 is that it had a receive that was sensitive enough to pick up just about anything above the noise floor. And the noise blanker was excellent for getting rid of that that nasty hum from the transformer on the poll in my back yard. Yeah, that's the best HF rig I ever owned.

The 2510 is also reliable as well. No problems with heat and drifting off frequency nearly as much as with other radios. And the SWR being built right in. That's cool. Used to talk all over the world with that thing. I'd sure like to design a new CPU board for it and a new LCD display. Give those radios a serious upgrade.

I mean, after all the PLL's are on the CPU board... What would be so hard about replacing the CPU board with another CPU, some RAM and a few decent PLL's. Then there would be no problem broadbanding it to go wherever the driver and finals will let it. And I think the MRF-497's and the MRF-477 finals are good up to 100Mhz.

I don't know about you, but I don't think Uniden built that rig for 10Meter alone... The radio board itself will go just about anywhere the finals will. I bet the board in this radio was intended for a different product, and the 10 Meter was an after thought, but I can't say for sure.

As far as the other guy talking about noise and whatnot below coming out of a 2510 all I have is that to say. It all comes down to who did the modification. A hobbyist, or a REAL tech. See, the hobbyist knows how to deal with symptoms, the engineer knows how to deal with problems. Hobbyist sees noise on a line and he puts a cap as a filter in to correct for the "noise"... Lo and behold he just succeeded in knocking the nice square wave that WAS the serial bus to the LCD display into nice curved sin waves. Hence, display doesn't work, OR worse yet displays incorrect information.

But, I guess that's why the hobbyists like the old analog gear... Pretty easy to understand the 40 position knob there.

I saw the best hack of my life today. Some guy that sent his radio in to my tech here in Buffalo had someone else in there before that was a "hobbyist"... Evidently the bulb blew out that illuminates the LCD display, so it was replaced. They TRIED to knock the heat down from the bulb by putting a resistor in line with the positive going to the bulb. Well, it did keep the heat down. But it still managed to get the white plastic inside to turn into a nice dark brown as it melted it onto the circuit board. Better yet the resistor looked like it was from some late 1940's equipment. So, now the display is very dark HOT display thanks to the plastic now being brown and doing little to reflect the light back at the

LCD... Suffice it to say we did manage to get the LCD display to function again. Evidently the 100uf 10V cap on there went bad, so no power going to the display board was filtered, and hence you couldn't distinguish one single bit that came in over the serial link for the numbers on the display. Therefore the display initialized and stayed at default power up. Replaced the cap, bammo... Display works again.

How to tell if your tech is a hobbyist:

1.) When you ask where his oscilliscope is and he says that he can do everything with his radio shack volt/meter.
2.) His soldering iron is resting on something to hold it over the candle flame to "keep it hot".
3.) His soldering iron doubles as a flathead screwdriver.
4.) He says "Ouch, hot!" several times per visit.

How to tell if your tech is an engineer:

1.) When you ask where his oscilliscope is and he shows you the color LCD display on what you thought was just a volt/ohm meter and then says, "Goes up to 10Ghz."
2.) When you ask what the other oscilliscope is for, and he says, "That isn't an oscilliscope, that's a spectrum analyzer."
3.) He takes a pen out of his shirt pocket, lights it and performs on-site repairs.
4.) He troubleshoots your radio over the phone within 5 minutes down to the component that's causing the problem and tells you the value without having to reference the service manual. SERIOUSLY! No 900 numbers tarot decks, map dowsing or other hocus pocus... What are the symptoms? Here is your answer.

Train - I do agree... Uniden HR series kick some serious butt... And not only can they scream, they can hear just as well. But there's mods to make them better at splash rejection too. I mean, not only does the radio talk exceedingly well, but I bet it could pick a needle out of a stack of needles. (ok, stretching it a bit... ;-)

But then again, I imagine that if I listened to the HR2510 transmit with an inept little toy such as the 5010 I might call it a splash box too.

Hey, why would CBers (legal limit 4 watts) want Bird meter slugs good
for 5 to 25 kilowatts?

Just curious.

With a note that the post was Way Way Off Topic

> Not only that - you're a (faceless) coward, much like Osama.

You, purple stain you don't even have the guts to use you name you
parasite, I at least have the balls to stand by what I say and use my
real name. Something a gutless cur like yourself would never have the
intestinal fortitude to do. You prefer to hide like the true coward you
are. You have much more in common with that insane terrorist than I.

So why don't you just ooze back into that primordal slime from whence
you came.

That's because you can't figure out that radio isn't about "shootouts".

I had a license there about 20 years ago, but the laws may have changed since then. Do you have a link?

Now, since you claimed that speeding is a felony, but gave only one example but which had extreme conditions, can you give an example where speeding at any speed is a felony?

The point is, Toll, that if you want to compare the crime you need to compare the punishment as well. And the punishment for speeding is a drop in the bucket compared to illegal CB operation.

Osama, bin Laden phoned George Bush.
'I had a dream, George. I had a dream about the US. I could see the whole country, and over every single building and private home was a banner.'

"What did the banner say?" Asked Bush.

"LONG LIVE OSAMA," sneered Osama.

"Well, I'm really glad you called," replied Bush, "because I also had a dream. In my dream, I saw Afghanistan, and it was more beautiful than I'd ever imagined. It was totally rebuilt, and over every building flew a huge swirling banner."

"What did the banner say?" asked the excited Osama bin Laden.

"Damned if I know," replied Bush, "I can't read Hebrew."

>
> Jerry

I think what he was saying, Jerry, is that the discussion is inappropriate
for this newsgroup. I agree. A more appropriate electronic topic might
be audio compressors or preamps, or how to adapt a tape-recorder or some
other device to the audio output. Or maybe an audio interface to a sound
card. Or how to split the mic to use a foot-switch and a studio mic.
I'm really tired of these amp discussions, not because of the illegal
nature (on the CB), but because the field of electronics isn't limited
to RF amps. But reading the posts in this newsgroup, it's easy to think
that there is no other purpose for a transistor other than to build a
gazillion-watt sparrow-cooker. I'm sure there are some people that would

be interested in how to build a power distribution block for all the radios under the dash. And most people are not aware of the wide variation in microphone output levels and properly matching them to the radio's audio input level (the main reason why one mic will sound fabulous on one radio but crappy on another). How about a power supply with a battery backup?

And guess what? All those topics are relevant for CB. Amps are not. If you want to talk amps, go somewhere else.

> Train

There are plenty of people that run more than the limit, they run it
clean, and they step all over people they can't even hear. There are
also plenty of people that think they are running clean, but most, if
not all, don't have the equipment to see if they are generating spikes
or harmonics on other bands, which they usually are doing. There are
also plenty of people that think that all they need to do is to add
a low-pass filter to their amp, but don't realize that RFI can be
generated and radiated from other places regardless, including the
antenna. And there are plenty of people that just don't care, and in
order to justify their own illegal activities, will try to convince
you that running power is just fine and dandy. Yes, it is fine, and
it can be a $17,000 fine from the FCC, whether the signal is clean or not.

These are very accurate meters, Aaron. They are excellent over a wide
range of power outputs. The ratings of the slugs are more of a
marketing gimmick as even amateur radio has an output limit if 1.5KW,
but you knew that already...right? (Just curious.) The speed rating of
tires are far in excess of the legal speed limits of all out states,
yet they provide them anyway.

Hello Dick:

I believe the transistors or even a tube amp could be held even or balanced. But looking at the wave form and listening to the audio will surly tell, ah.

And I know for a fact that some distortion will not be detected by sound / hearing the signal along. But if its sounds ok should be okie dokie.

The only other thing I need to know is how much current the base / bias supply need, I am thinking about 5 to 10 amps, worst case, probably not that much for class AB1.

Jay in the Mojave

Hello Skipp & PEAKABOO:

Glad there is a consensus of opinion, that gives ya a warm feeling which
way to go.

Maybe the 2 pill push pull class A amp would be the perfect driver for a
8 pill Class AB amp, of course with a padded input to limit the drive,
and avoid the Class A driver from being over driven.

When you have a car that can and will do 150 MPH anytime the driver feels so
inclined to push the (typical epically long Italian) gas pedal with a little
gusto, you need speed Z rated rubber on the road. Although when my car was
built there was no such thing I feel much better knowing that these skins
are meeting the road rather than the OEM tires of yesteryear.

I have known a couple people that where fined big time, and a VERY small
amount of people who actually went to court.
Otherwise, getting busted driving wrecklessly is
A. More dangerous to public health
B. Carries a larger fine than you get with freebanding.
Toll_Free

          Go online and see if you can find
the Marin Independent Journal or I think it's called the Marin IJ. The
CHP just did an illegal traffic break and caught some 30 motorcycles.
Two arrests and some
fifteen traffic violations, all classified as criminal and must be
present in court
with a lawyer.

      Please cite where a Cb'er went to federalcourt for
violating part 95. I've known at least 6 individuals that had NALS, one
that had an inspector knock on his van window. Not a one ever went to
federal court and only one person had to appear at the FCC on Golden
Gate Ave in SF to show them his Uniden PC33 that the neighbors with
lousy electronics complained about.
      I've know two people that got fined, both are idiots.
One keyed up a base station with a thousand watts next door to KQED
(public channel) the other lived next door to PacBell's main facility.
Those are the only people I have ever known to be fined, and very little
compared to the $10,000 to $85,000 that you and Voobsie cry about,
$1,000 & $1,200. Those are cheaper than a DUI now a days.

Nothing more than a bunch of 2312 finals strung together waiting to burn up.
Get something with a single "pill" type transistor in it. Look for something
with a single MRF 455, 2SC2290, or a 1446 and you will be much happier with
the lifespan of the unit. These can be had for 50 to 75 bucks new.

So far, most of the hams doing the "shredding" can't figure out that I
was talking about
mobile to mobile shootouts, and keep telling me about locations, etc.

That's because you can't figure out that radio isn't about "shootouts".

"Actually, it has more to do with your inability to make radio conform
to what you think it should be. Lack of control has always been your
problem here."

California for one.
I had a license there about 20 years ago, but the laws may have changed
since then. Do you have a link?

"We're all still waiting on the link that backs your incorrect
ascertation of all those cbers interfering with emergency ops."

Now, since you claimed that speeding is a felony, but gave only one
example but which had extreme conditions, can you give an example where
speeding at any speed is a felony?

"And we're all still waiting for a single
example where a simple barefoot Dxer was fined thousands of dollars."

The point is, Toll, that if you want to compare the crime you need to
compare the punishment as well.

"Yea, I been telling you that since you arrived here with such a
boisterous attitude and began shooting off about that of which you
actually know very little. Now, about that barefoot freebander
interfering with emergency ops..."

And the punishment for speeding is a drop in the bucket compared to
illegal CB operation

"Actually, it isn't, and this is what pains you and predisposes you to
the Little Caesar syndrome continually displayed by yourself."

Aaron,
Dadburn it, we ALL know the sale and use of amps on CB is illegal. We
agree on that illegality.
But what I DON'T agree with is your attempts to suppress discussion of
circuitry and theory--even
if it has to do with the differences between A, AB, and C amps. By your
own methods of attempting to prevent (you cannot) said discussion, you
could apply the same thing to two electronics engineers who have no
interest in radio, but have the knowledge of amplifier technology to
intelligently discuss said subjects.
People have the right to discuss most ANY subject they choose--even
amplifiers--on the newsgroup because no "crime" is commited via mere
discussion. Said discussion has to be
APPLIED and USED for it to become illegal.. Now. IF I am hindered in my
own efforts to
communicate by a "freebander" or a dirty CB amp, THEN I will take the
appropriate measures
of asking the offender to stop, or reporting him to the Enforcement
Bureau because it is at THAT
time that something illegal has taken place--but not before. IF I hear
truckers on the nearby interstate operating on 10 meters, I "might" even
follow him with a camera and a tape recorder and turn him in. Because
that is illegal-=-talking about operating on 10 meters without a license
is not.
It might piss me off to hear somebody saying they are going to do that,
but we have no leg to stand
on--until something illegal takes place.
Jerry

I think what he was saying, Jerry,

"But of course. What would this ng be like without your type running to
defend AA?"

is that the discussion is inappropriate for this newsgroup. I agree.

"Yea? Good deal. You have a little "on/off" switch somewhere on that
terminal."

A more appropriate electronic topic might be audio compressors or
preamps, or how to adapt a tape-recorder or some other device to the
audio output. Or maybe an audio interface to a sound card. Or how to
split the mic to use a foot-switch and a studio mic.

"Thank you for once again, providing examples of how you wish the ng to conform to your views, standards, and morality."

I'm really tired of these amp discussions,

"I'm really tired of forcing you to read them."

not because of the illegal nature (on the CB), but because the field of electronics isn't limited to RF amps.

"Maybe not, but it is indeed part of it. Deal with it or move on."

But reading the posts in this newsgroup, it's easy to think that there is no other purpose for a transistor other than to build a gazillion-watt sparrow-cooker. I'm sure there are some people that would be interested in how to build a power distribution block for all the radios under the dash.

"Maybe. Maybe not. But you and Lelnad can continue inventing them and answering your own posts like you always do..it keeps you out of our hair for awhile."

And most people are not aware of the wide variation in microphone output levels and properly matching them to the radio's audio input level (the main reason why one mic will sound fabulous on one radio but crappy on another).

"That's because it's not a priority with what we do."

How about a power supply with a battery backup? And guess what? All those topics are relevant for CB. Amps are not. If you want to talk amps, go somewhere else.

"Nah. Think we'll stay right here and wait for it to piss you off bad enough that you will announce your annual threat of starting your own modified group, call for members, curse the group when you get no takers, call us all felonius criminals, lose a few ISP's, then return as usual in the fine form we have all come to know you for."

: Jay in the Mojave <jay123a@qnet.com> wrote:
: Hello Skipp: So two transistors would have to be used in parallel?
: That make the impedance matching more fun.
: Jay in the Mojave

One "lays out a circuit" for the most practical design. The Two Transistors classic layout works best in AB and push pull. The same two transistors in Class A would probably be better layed out in parallel. Regardless of the layout, the input impedance of an rf transistor (of this type) is pretty low. You can use some impedance matching methods as more practical to apply. The push pull layout using the matching xmfrs has a broad band nature to it. It's simply the most practical.

The bias is set using the mfgrs recomended values (off the data sheet). One sets the bias for a zero signal current value for the classic linear transistor. If you have the luxury of fancy test equipment, you can dial in the bias for the best linearity at normal operational power levels.

Class A operation gets you little gain and a lot of heat. A true Class A Krell 50 watt stereo amplifier makes about 400 watts of heat, regardless of the signal through it. In the winter it makes a nice space heater. In the summer it doesn't get used as much as the Phase Linear 400. To be honest, you can't really hear a large difference in overall sound.

cheers
skipp

Uh oh, now you went and done it. You asked twistie to prove something.
Now he will whine for three months trying to divert attention away from
this discussion and never prove a thing.

And that is exactly the point. If the arguments, made here by the Pirate
operator side of the fence, made any sense at all it most certainly
would have been used in a court room to win a case against the FCC.

"Well, maybe it's because it never comes down to having to go to court.
This was YOUR reasoning, remember? I'm still waiting for a single
instance of a barefoot freebander going to court, getting busted,
ANYThing, for simply dxing."

Plus you would also assume they would not delay for a moment to stick
it in your face to rub it in either.

"No, that's your mentality."

Since no such court case(s) have ever surfaced here, or else where that
I'm aware about, then it can be conclude that all of the silly excuses
given by the Pirate CBers does not stand up under legal scrutiny.

"Um, a more logical conclusion would be that it simply doesn't exist."

In other words the legal theories behind the idea of ownership of
property in all it's forms, whether it's portable and securable for
exclusive use or not, has not been not been invalidated by any of their
silly excuses to date.
--

"Who is talking about invalidating ownership? This is the first I've
heard of it. Where did you get that? Or is this mere affirmation of the
deducibility comprehension deficit of what you read?"

from the users of CB radio equipment-intruderso...

Group: rec.radio.cb
Date: Thu, Oct 25, 2001, 11:18pm (EDT+4) From:
Twistedhed-abuse@cotse.com (Leland C. Scott)
"Twistedhed" <twistedhed@webtv.net> wrote in message
news:22494-3BD6D63F-10@storefull-123.iap.bryant.webtv.net...

"In the first place, that idea is no more prevalent among cbers than it
is nocode hammies who mod their rigs for eleven meter."

First of all you just assumed. Since nobody is going to ID themselves in
any meaningful way there is no way to gage the magnitude.

"But of course. Read what I wrote s-l-o-w-l-y this time. I said, and I
quote, "...that idea is no more prevalent....", illustrating the
ludicrousness of the notion. Get it now?"

For all I know it could be Tim out there bootlegging my callsign.

"That is hysteric. You think you have a snowball's chance in hell of
anyone believing that, as you sit here and post that nonsense while
incorporating my moniker as your own? Heheh! Just like Dogie did to Tim
awhile back.."

On the other hand demonstrating the incursions in to 10m is easy. Just
tune to the low end of the band for any phone transmissions. Any you
find with out a valid Ham call sign proves the point. Not only that but
records are now being kept to get some hard numbers for the magnitude of
the problem

"Good deal."

"Are you speaking strictly of power users? Out of banders? Anyone that
doesn't conform to the letter of the law? Anyone that doesn't agree with
you?"

That goes for any operator in or around the 11m band. They don't
disagree with me they disagree with what Part 95 has to say.

"If that was true, you wouldn't take it personal."

What they don't like is being reminded about it, and being referred to
as criminals.

"Doesn't bother me in the least. Since you THINK it bothers some, you
continue to ply your BS that provides us with laughter."

The term criminal is commonly applied by the general public to those who frequently violate the law knowingly and fits the description of several people on this group including yourself.

"Aw, you know nothing, 'Nad. You can't say that because you know nothing other than what we talk about, which is why it is so laughable. I have a feeling half of us never even seen anything bigger than a Palomar but talk all kinds of guff just to see which one of you will pop next. You do know about the dead pool, don't you? See, some of us were funnin' around in chat and the idea of the dead pool came about ((you know, Clint Eastwood, Howard Stern, etc). All in good fun, you were voted most likely to die first from natural causes,,some said you would go of a heart attack, but I think the BP is gonna do you in. Seems like a few are even trying to help you along, dropping hints about certain identities being released, etc."

"This isn't a problem anywhere, save for among a few of you in this group using it as a catalyst for something that simply isn't there.

When I tune to 28.085 and there is a couple of truckers there talking in perfect North American English, with no ID, that's not a problem?

"I wasn't talking about 10 meter and you know it."

I'm not talking about a once a year thing, or a month, or a week, but more like everyday. That's a problem.

Sparky was going to face off with this and realized he really knew nothing of the freqs that are considered the freeband, and aptly demonstrated such. He at least had the good sense to back off the subject after learning about the empty freqs. and how wrong he really was."

I'll tell something about those so-called 'empty frequencies'. They are empty for a reason. They are called 'guard bands or frequencies'.

"And those that exist, are outdated."

They are there to add a bit of space between other frequencies that are in use to reduce interference. A perfect example is your TV set. For broadcast over the air stations do you find two local TV stations on adjacent channels? No you don't because the empty channels are there to help eliminate interference from one station with another at the viewer's TV set.

"This too, is outdated, when compared to cable and satellite subscribers."

So the 11m problem is like a weed,
it's necessary to pull it out by the roots to get rid of it.

"We know how you must feel. Day after day,
night after night, month after month, crying, whining, hoping, praying,
that the horrible cbers will be taken care of.

No but you spent much of your time digging through thousands of old usenet messages. Hasn't done you any good yet.

"You have me confused with your alter ego."

Extreme frustration over such mundane matters appears to be a precursor to bipolarity."
You should at least research a new term

"Why? It fits you to a "T".

that you start using to make sure you know what it means, and at least get the term right. It's called "bipolar". In your case I guess "bipolarity" you must be refering to yourself like "AC-DC". ;-))

"No, I had it right the first time. Of course, that inability to comprehend what you read plays a huge part in your failures."

"As no doubt could the hammies."

No problem there. We WANT our bands cleaned up.

"So why aren't you crying in the hammie forums? Need some assistance in locating illegal hammies or is this more of your selective moronic behavior?"

For CB however there is general lack of interest to do it,

"As among the hammies."

You must be hanging out on another news group.

"As many times as you tried to pull me into your bullshit on the hammie forums, I must tell you again, due to your inability to comprehend what you read, this is the only forum I have interest in."

and there is a group who is VERY interested that it stays a mess.

"As among the hammies."

More like Twisted, Tim, Peakaboo, ...
So once the garbage starts spilling over the line,

"I agree that you are lost.'

I'm glad you do.

"Here you are in a cb room and self admitted you don't even use it".

I'll bet you have a strong opinion about abortion, but yet you can't get pregnant,

"Yep, I do have a strong opinion concerning abortion, but apparently, not as stong as yours."

and I'll also wager that never stopped you from voicing that opinion either.

"Keep fumbling...."

You're not a female but you feel perfectly entitled to tell a female what she can and can not do with her body right? So as long as you think you're entitled to stick you nose in to things that don't directly concern you others can do the same with the issue of their choice, and that includes CB radio.

"Absolutely amazing...bordering on psychotic."

AMATEUR RADIO NEWSLINE(tm) REPORT #1263 - OCT. 26, 2001

Amateur Radio Newsline report number 1263 with a release date of
Friday, October 26th, 2001 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The ARRL says to get ready to fight to protect the 70 centimeter band and the FCC says to stop sending paper to its Washington office. These stories are first on Amateur Radio Newsline report number 1263 coming your way right now.

(Billboard Cart Here)

**

FORCED SPECTRUM SHARING: BATTLE LOOMS OVER PART 15 ACCESS TO 425-435 MHZ

The American Radio Relay League says that a battle is looming with the FCC over the agency’s proposes changes to its Part 15 rules governing unlicensed devices. Changes that would allow operation of advanced radio frequency identification devices between 425 and 435 MHz. And it could spell the word trouble for ham radio as we hear from our South-East Bureau Chief, David Black, KB4KCH.

--
The ARRL Letter explains the League's position. The FCC has decided to grant a request made earlier this year by SAVI Technology Inc. SAVI wants to us the spectrum for radio frequency package identification tags. To help make that happen, the FCC is issuing a Notice of Proposed Rule Making.

In comments on the VHF Reflector, Russ Pillsbury, K2TXB, discusses SAVI. He describes it as a big, multi-national company with significant worldwide funding. Pillsbury also says SAVI has large United States defense department contracts as well.

SAVI Technology sells radiolocation and wireless inventory control products. SAVI says it needs the rules change to meet customer demand for increased radio frequency identification system capabilities. And the FCC says it agrees with SAVI. The Commission says changes
to its Part 15 rules would allow more advanced radio frequency ID systems on the 433 MHz band and would serve the public interest.

The Commission proposes creating a new section to Part 15. It would allow operating radio frequency ID systems between 425 and 435 MHz. Transmissions could be up to two minutes at a time. Maximum field strengths would be at the level now permitted only for extremely short-duration, intermittent control signals. And that's what ham radio operators don't like. They see that as a high potential for interference to Amateur Radio operations nationwide. And

it's why the ARRL fiercely opposes the rules change.

The League takes a strong stand. The ARRL says the FCC has set the stage for another battle between amateur and commercial interests. League Executive Vice President Dave Sumner, K1ZZ, accuses the FCC of not having thought this one through. Sumner normally expresses ARRL Board policy. He says the Part 15 radio frequency identification proposal is: "contrary to the whole philosophy of the Part 15 rules."

Sumner says the radio identification devices SAVI proposes belong on other frequencies--specifically, those authorized for use by devices regulated by FCC Part 18 rules. Those regulations cover Industrial, Scientific and Medical devices. The FCC counters, saying the proposed rules change dealing with the ID systems is to harmonize its own rules with those in other parts of the world.

But Sumner fires back. He says 433.9 MHz is allocated for Industrial, Scientific and Medical devices only in ten European countries but not in the rest of the world. And it is not permitted in North and South America which make up I-T-U Region 2.

From the South East Bureau in Birmingham Alabama, I'm David Black, KB4KCH, for the Amateur Radio Newsline.

--

Another portion of the proposed rules change involves the Industrial, Scientific and Medical frequency allocation at 13.56 MHz. Dave Sumner says at first glance that proposal might permit increased emissions in the bottom 10 kHz of the 20-meter amateur band. Sumner adds that the ARRL will take a closer look at this section of the overall proposal before assessing its interference potential. The entire Notice of Proposed Rule Making and Order is contained in ET Docket 01-278 is available on the FCC website at www.fcc.gov and the ARRL Website at www.arrl.org. (ARRL, K2TXB, VHF Reflector)

**

FORCED SPECTRUM SHARING: FCC ISSUES 430 MHZ EXPERIMENTAL LICENSE FOR SOCAL

Hams in Southern California are on alert after the FCC issues an Experimental License to Digital Wireless Corporation in Los Angeles to test its systems in the 420 to 430 MHz Amateur Radio band. Digital Wireless Corporation is a manufacturer of secure, all-digital, Internet-linked trunked and non-trunked dispatch radio equipment that provides secure conversations and seamless network coverage for business, government and military users. The license with the call sign W-C-2-X-K-K permits holder Brent Jaybush and Digital wireless to operate within 5 km of their factory in Los Angeles through February 01, 2003. (FCC, ARNewsline(tm))

**
FORCED SPECTRUM SHARING: ARRL - NO COMMERCIAL USERS AT 2390-2400 MHz.

The ARRL says that it urges the FCC -- ‘in the strongest possible terms' -- to make no commercial allocations in the 2390 to 2400 MHz primary Amateur Radio

Service allocation. In a bulletin to its members released on Wednesday, October 24th the League did however tentatively suggest hams might be willing to share the band with compatible government services that are displaced to make room for advanced wireless systems.

In its communication to the regulatory agency, the ARRL tells the FCC that advanced wireless systems are fundamentally incompatible with continued amateur access to the band.' The ARRL says the federal government 'has historically been a compatible sharing partner and that government uses would offer 'the least disruptive opportunities for sharing' in the band. (ARRL Bulletin)

**

RESTRUCTURING: NEW LICENSING REGS IN NEW ZEALAND

It’s a nation that now only has two license classes and a 5 word per minute code test. This as New Zealand joins the worldwide move toward simplifying the entry to ham radio. Amateur Radio Newsline’s Jim Meachen ZL2BHF has more:

--

The introduction of New Zealand’s Radiocommunications Regulations 2001 has brought changes for Amateur Radio Licensing in New Zealand. Forthwith there are only two classes of Amateur Radio Licence available -- The Limited and The General. The Novice and the Novice/Limited licences grades have been removed.

The Limited licensing procedure remains unchanged and the General licensing procedure is changed by the lowering of the Morse Code test to 5 words-per-minute. Novice and Novice/Limited licences will no longer be granted. Existing licences in these categories will remain valid under the new Regulations and with their original licence provisions.

New Zealand’s Licensing Authority the Ministry of Economic Development is encouraging existing Novice and Novice/Limited licensees to review their qualifications to see if they now meet the requirements of the new General Licence.

Amateur who have passed the previous Novice Morse test of 6 wpm and attained a pass of 50% or more in the theory and regulations examination, or 66% or more in the new multiple-choice computer-generated examination now meet the requirement for a General Licence and can immediately submit an application for an upgrade.

The existing ZL callsign grouping that indicates the class of licence of the holder will remain in force. This will require all licensees upgrading to a General licence to obtain a new callsign.

Included in the new Regulations is a long awaited provision for variation to the manner in which an amateur examination is carried out if there is need to vary the examination process for a candidate with a particular disability. Variation will be at the Chief Executive's discretion and the Ministry will deal with each case as it arises.

It is expected that the New Zealand Association of Radio Transmitter Morse Examiners will test at 12 wpm on request for those who may wish to meet this higher operating standard for overseas travel.

From Auckland New Zealand I'm Jim Meachen ZL2BHF for Newsline.

--

With more and more nations turning to 5 words per minute Morse testing, it appears as if it will soon be the standard -- worldwide. (NZART, ZL2BHF)

**

RADIO AND THE WAR: FCC STOPS ACCEPTING FILINGS IN ENVELOPES

If you are planning to write to the FCC in Washinton D-C – the word is – don't. This as the agency issues a public notice saying that filings enclosed in envelopes will not be accepted until further notice.

The reason is the same as the one CQ Magazine stated last week when it said it will no longer accept mailed in paper logs – the possibility of bio contamination. And while the FCC notice makes no direct reference to the anthrax scare, the Broadcasting and Cable newsletter says most view it at as a precautionary.

In a nutshell, heres what the FCC says to do. Document filers and messengers delivering paper communications to the agency will be asked to dispose of envelopes in a receptacle outside of its Washington, D.C., headquarters. Mail and packages delivered to the agency will be opened at an off-site location. If you must send a paper filing to the FCC, the only way it can be done is by clipping the papers together with a rubber band or other fastener with no envelope. Then you either hand carry it or courier it to 9300 East Hampton Drive, in Capitol Heights, Maryland. Those requesting confidential treatment of their documents must have materials placed in commission-provided envelopes. The FCC also says that filers have the option of submitting any document electronically.

And what about filings by U-S Mail to the Gettysburg Licensing facility in Pennslvania? Items like ham radio license renewals and the like? According to the ARRL Letter, the public notice on FCC mail makes no mention of any change in procedures regarding filings in envelopes to Gettysburg, but that could change at any time. (Broadcasting & Cable, ARRL)

**

RADIO AND THE WAR: RADIO SOLO HEARD IN THE USA

Last week we reported that the United States has been air dropping Bay Gen wind up radios into Afghanistan. We also said that the government six EC-130 planes that make up the Air National Guard's Commando Solo fleet serve as flying radio stations. Now we can give you an idea of what the airborn transmission to the Afghan populations sounds like. Take a listen:

--
Audio here
--

That signal was reportedly recorded by a shortwave listener on the U-S East coast on October 18th and posted to the Internet. And while we do not know exactly what's being said, an English translation posted to the Pentagon's website indicates its probably a transmission to Taliban fighters and might well say: "When you decide to surrender, approach United States forces with your hands in the air. Sling your weapon across your back muzzle towards the ground. Remove your magazine and expel any rounds. Doing this is your only chance of survival." (shortwave.com, ARNewsline(tm))

**

RADIO AND THE WAR: A RUN ON RADIOS

One of the hottest selling consumer electronic items since September 11th is the scanner radio. According to several news reports, the people buying them say that it gives them a sense of security knowing what's taking place in the community in light of the terror attacks on New York City and the Pentagon.

One story says that the Radio Shack chain, based in Fort Worth, Texas, has reported a major increase in sales. The same with such dealers as Scanner World USA, a mail-order business based in Albany, N.Y., and Uniden America Corp. of Fort Worth. In fact, some retailers report sales are up 10 percent to 30 percent compared with the same period last year.

That article quotes Norm Schrein, KA8PGJ, who is president of the Bearcat Radio Club in Dayton, Ohio. Schrein says he went to a trade show in Peoria, Illinois, four days after the attack. Business was so brisk that his stock of scanners was all but cleaned out.

But scanners are not the only hot product running off dealer shelves these days. All-band shortwave radios are running a close second. According to one news story the lure of shortwave receivers is that they allow for listening to broadcasts from around the world, including airline, shipping and military communications. Other reports say that shortwave gives the public yet another avenue to get news items not regularly reported by the U-S press. (Various published news reports)

**

ENFORCEMENT: DON'T USE ILLEGAL GEAR FOR BUSINESS

A Kentucky towing company is told to stop using the ham bands to communicate. This after the FCC receives complaints that the company's trucks have been heard on 10 meters. Riley Hollingsworth, is the FCC's Special Counsel for Amateur Radio enforcement matters:

--
Hollingsworth: “We sent a warning notice to STI Towing and Repair in Walton and Florence Kentucky about using 10 meter Amateur equipment in their business operation. Related to that, we sent a warning to an employee licensee of the company [named] Robert McCoy, N4ZTA of Florence Kentucky about the same matter.

Now that employee may have equipped the trucks wth unlicensed equipment. The trucks are tow-trucks number 21, 27, 52, 97, 99 and RR4 operating in the Walton and Florence Kentucky areas.”
--
STI Towing and Repair was given the usual time to respond. (FCC, RAIN)

**
ARRL MEMBERS: THE LEAGUE NEEDS YOU IN THE CC&R EFFORT

If you are an ARRL member, listen up. This one is for you.

Have you ever been denied the ability to put up an antenna, or to operate an Amateur Radio transmitter? Have you had any other restriction on your Amateur Radio activities because you live in a housing development or condominium complex governed by private land use regulations? Well, the ARRL Board of Directors has adopted a goal of trying for legislative action that helps overcome the unreasonable restrictions of C-C-and R’s that prohibit or restrict Amateur Radio antennas. And you can help. Heres how.

According to the ARRL Letter, the league has a sample letter at its website. That’s in cyberspace at www.arrl.org. If you are affected by a CC&R, or know someone in your Congressional district who is, please adapt the sample letter to your own situation and consider sending it to your member of Congress. And if you decide to write please send a copy to the ARRL's Office of Legislative Affairs.

To find your Senator's mailing address check www.senate.gov/contacting/index.cfm. To find your Representative's, check www.house.gov/writerep. (ARRL)

**

AWARDS: DARA OPENS NOMINATIONS FOR HAM OF THE YEAR

The Dayton Amateur Radio Association says its opening the nominating period for the 2002 Dayton Hamvention Awards. There are three awards presented each year. They are the Radio Amateur of the Year, Special Achievement, and Technical Excellence.

The Radio Amateur of the Year is described as the special person who has made a long term commitment to the advancement of amateur radio. We are looking for a well-rounded individual who has contributed to our hobby in some outstanding way. The Technical Excellence award is for the person who has made an outstanding technical advancement in the field of amateur radio while the Special Achievement Award is reserved for the ham who has made an outstanding contribution to the advancement of amateur radio. This latter award is usually given to a respected amateur who spearheaded a single significant project.

All amateurs Novice through Extra are eligible. Awards are decided by the Awards Committee, based partially upon the information received. Magazine articles, newsletters, newspaper clippings, videos and the like are appreciated but cannot be returned. The deadline for nominations is January 31, 2002. Nominations can be submitted by US Mail to Post Office Box 964, Dayton Ohio 45401 or by completing the convenient e-form on the web at www.hamvention.org. (DARA)

**

NAMES IN THE NEWS: HAP HOLLY KC9RP TO SPEAK IN L.A.

If you live in the Los Angeles area, and have never had the opportunity to meet RAIN Producer Hap Holly, KC9RP, you will have you chance very soon. This as Hap and his wife Stephanie venture west to the City of Angeles for a speaking engagement by KC9RP.

Hap will be the guest of the TRW Amateur Radio Club at its Thanksgiving Awards Banquet the evening of November 10th. There is one caveat. This event is for active TRW Radio Club members and their guests only. More information is on the web at www.w6trw.com under the subject Annual Banquet. (ARNewsline(tm))

**

NAMES IN THE NEWS: W4WYR NAMED A “CHAMP”

The ARRL Letter says that Southeastern Division Vice Director Evelyn Gauzens, W4WYR, is the recipient of the 2001 Citizens' Ham Mobile-Marine Patrol or CHAMP Award. Gauzens was selected for her work as co-founder of the famed Miami Tropical Hamboree ham radio convention and as being a prominent community activist. The South Florida FM Association, Citizens' Crime Watch, and the Miami-Dade Police Department established Citizens' Ham Mobile-Marine Patrol in 1994. (ARRL)

BREAK 2

From the United States of America, we are the Amateur Radio Newsline, with links to the world from our only official website - www.arnewsline.org.

(5 sec pause here)

**

EMERGING TECHNOLOGY: HIGH SPEED INTERNET CONNECTIONS GROWING

It won't ever replace ham radio for versatility, but high-speed lines connecting people to the Internet increased by 63% during the second half of year 2000 That’s a total of 7.1 million new connections. Of the 7.1 million high-speed lines, 5.2 million were residential and small business subscribers. The CGC Communicator says that the rate of high-speed growth for the full year of 2000 was 158%. (CGC Communicator)

**

ON THE AIR: CULBERTSON A HIT AT JOTA 2001

Astronaut Frank Culbertson left a global trail of excited Scouts the weekend of October 20 th as he made rapid-fire QSO's during the worldwide Jamboree-on-the-Air. The commander of the Expedition Three crew on board the International Space Station used the NA1SS call sign to rack up contacts in many places including Australia. There on Saturday, the 20th, Tony Hutcheson, VK5ZAI, took a portable station to the Riverland Scout Hall where a crowd of about 60 watched as one of the senior Girl Scouts asked Culbertson a question. Back here in the United States, sixteen Boy Scouts from Troop 48 in New Orleans gathered at the station of K5CFW, to pull off a quick QSO.

On the early afternoon pass over the U-S, KD4SFF, using the phonetics "Scouting for Fun," set up a station in his backyard in Greenville, South Carolina. He had five Scouts from Boy Scout Troop 555 over. Frank told one of them that he had grown up in South Carolina, and that he, too, had been a Scout.

Culbertson has been very active on the 2 meter band from the ISS. He talks to several schools each week as well as numerous open QSO’s worldwide. (AMSAT)

**

HAM RADIO IN SPACE: NEW STATION AT UK NATIONAL SPACE CENTER

A new Amateur Radio Satellite Service ground station has been opened at the United Kingdom’s National Space Center in Leicester. Using the call sign GB2NSC the station will operate at the heart of the center in the 'Space Now' attractions area, That’s the same location where the National Space Center Amateur Radio Society is demonstrating how to contact amateur radio equipment on board the International Space Station. (GB2RS)

**

SCIENCE AND SPACE: NASA’S GOLDIN ANNOUNCES RETIREMENT

Daniel Goldin, who pushed NASA to be leaner and faster and then came under fire for it, says he will retire from the space agency next month. after nearly 10 years in the job. The longest-serving administrator of the National Aeronautics and Space Administration Goldin will leave in mid-November with a record of 160 successful space missions international space station that is now permanently occupied. Cost over-runs in the billions of dollars are said to have contributed to his leaving the agency. (Published news reports)

**

INTERNATIONAL: WINLINK ILLEGAL TO OPERATE IN VK

It appears that the very popular WINLINK messaging system is illegal to use in Australia. WINLINK is a program and intertie network that provides full-featured digital E-mail transfer, position reporting and weather service to the global amateur radio community where Internet access is not available. But as Q-News Graham Kemp VK4BB, tells us, the Australian Communications Agency says – “no!”

--

In news services this week we see the WIA's Federal Technical Advisory Committee Chairman John Martin VK3KWA reminding operators it's "just not on" to operate this program "down under". John has had discussion with the ACA on the topic, it's not a simple matter of changing the amateur regulations, rather the issue is tied in with legislation including the Telecommunications Act.

John concludes that in the short term there is no chance whatsoever of any change in the ACA's ruling that Winlink is illegal in Australia. Packet radio bulletin board operators should also be very careful about forwarding any Winlink traffic, and preferably filter it for manual checking before allowing it to go through.

--

Currently there are WINLINK nodes in the United States and nations worldwide. The one major exception is Australia. For the rest of the world where it is legal, more information is on the web at www.winlink.org. (Q-News)

**

ON THE AIR: LONG PATH FRIENDSHIP NET.

In this time of turmoil a group of hams from around the world are going to try to bring some light to the end of a rather dark tunnel. This with a new on-the-air fellowship gathering called the Long Path Friendship Net.

The net will start at 1430 UTC, Sundays on 14.165 MHz with K6HAE and WTZ in California and ZS6AN in South Africa as control stations. The founders say that this is a big planet and there are enough natural disasters to be dealt with as well as some sad man-made ones for which the proficient and friendly radio operator is a valued contributor.

Again, that’s the new Long Path Friendship Net every Sunday at 1430 UTC on 14.165 MHz in the Extra segment of the 20 meter band. (Press release)

**

DX

In DX, the ARRL’s DXCC Desk reports that the ZK1NDK North Cook Island operation now good for DXCC credit. Hams who submitted request for ZK1NDK and were denied credit may contact the Leagues DXCC desk and have their records updated without having to resubmit cards. (OPDX, Daily DX, others)

**

THAT FINAL ITEM: REAL SKY HOOKS

And finally this week, you may find this one hard to believe, but its true. It comes under the heading of an honest to goodness sky hook -- and no we are not kidding. Bill Pasternak, WA6ITF, has more:

--

The proposal for these sky hooks comes from ATG industries in southern England. It wants to build reflective airships and have them operate at a height of

65,000 feet.

These craft would be unmanned and would station keep using solar powered electric engines and a lightweight diesel engine. ATG claims that these "skyhook" ships could keep position for up to 5 years. That they could act as a transponders for services such mobile telephones, broadband internet and digital radio.

ATG estimates that nineteen of these sky hook ships could cover most of the U.K. and replace as many as 4000 mobile telephone poles and up to 10,000 towers that are expected to be needed for the new G-3 technology.

For the Amateur Radio Newsline, I’m Bill Pasternak, WA6ITF.

--

Its not known how long these sky hook ships will take to develop or if they will ever be deployed. (Telecom Daily)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at
www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

Before we go, this advisory. The Amateur Radio Newsline Incorporated is not soliciting for affinity credit cards in our name or that of the old Westlink Radio Network. Nor are we telemarketing amateurs to sign up for any affinity credit card.

If someone calls you trying to get you to sign up for a credit card supposely sponsored by the Amateur Radio Newsline, get all the information you can including the full name of the telemarketing representative, information on sponsoring organization and the bank issuing the card. Then say no, hang up and drop us an e-mail with the details. We will take it from there.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Roy Neal, K6DUE, saying God Bless America, 73, and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2001. All rights reserved.

3179. Mic Wiring Question?

Newsgroup: rec.radio.cb
Date: 2001-10-26 16:50:41 UTC
From: Frizz <kg4ivt@hotmail.spamsucks.leaveme.alone.com>
Message-ID: <BvgC7.39637$%B6.15016411@typhoon.southeast.rr.com>
Source record: 102240

I replaced the mic element on a Yaesu 7 pin (model YM-47) microphone with an electret type element after the original element failed. The microphone is powered as to allow frequencies to be changed on the rig I am using via two pushbuttons on top and it also has a lock for this feature on the back of the mic. I hooked the element up using a 3.3uf capacitor and a 10k resistor going to the "hot" side of the mic to allow power and audio to get to the necessary places. The only place I could think of to get power for this element was the supply for changing the frequencies so that's where I hooked it up. However, this started the frequencies changing like mad and wouldn't allow me to stop it even when using the lock feature. Does anyone know how I get this to work? I don't really have any old mics that I can cannibalize elements from. Thanks!

: Aaron H. Voobner <voobner@yahoo.com> wrote:

Not his real name...

: Here we have a discussion being propagated by three HAMS

If someone has an Amateur, Commercial, CB, RadioTelegraph or any combination of licenses, it does not limit their operation or discussion to any one of said radio services or a news group. Any Amatuer Radio operator can and is probably also be a user of CB radio at one time. We are waiting for you to add anything to any news group that isn't your standard "against the law diatribe." Many hams are also CB radio operators...

: about AMPS

We'll wait for you to show us what is illegal about the discussion of any amplifier circuit. We'll wait for you to show us how you can tromp on free speech.

: (which are forbidden by law to CBers)

...which are illegal to use on Class D CB in the United States, not illegal to talk about or own if one has a legal place or radio service to use them. There is nothing wrong with talking about any circuit unless you've suddenly changed the free speech part of our Civil Rights. But it appears you've been heading that direction using a fake news group name.

: in a CB NEWSGROUP.

We'll be waiting for you to start a news group over in Yahoo E-Groups so we can let you sit there all by yourself. You don't set the topic or the limits of this news group. You just throw out crap using a false name...

: Who could possibly benefit from that here?

Everyone willing to learn something... you don't appear to be in that crowd... We'd be willing to comment on anything positive and/or constructive you'd care to add to the news group. Going back through the archives... I've added almost nothing constructive to the news group... ever.

: Go to a ham newsgroup and chat about it why doncha.

Because anything you say matters little to us so we don't care about your continued efforts to troll the news group using a fake name. Your are the weakest link. You manage to prove that to us on a regular schedule.

: Oh but maybe is your intention to "elmer" the CBers. You should know
: that you are also being held up as an example.

You should know that few people if any care about what you think. Tell us how your posting under a fake name is a good example..? You are the Elmer of fake...

: And the current example you are displaying is that FCC rules are to be
: laughed at.

As you would like to intepret the topic. We don't care what you think... sorry to rain on your one person parade. We'd rather laugh at you...

: Nice job of "elmering" fellas. Way to go.
: -Aaron-

Now you step in buck'o... start posting with your real name first then start Elmering anyway you see fit to post. How about leading rather than trolling. Then people will take you for more than a fake news group jackass.

> place.

The people on this newsgroup represent a very small part of the CB community.
Count how many *different US CBers* post on this group, and compare this to
how many CBers there are in the US. Those who are not CBers cannot be
counted, as they are not in the CBer figures, and are NOT the target of the
"AKC".

For the UK group the figure would be less than 0.1% of the CB community that
use the group. And those that use the newsgroup probably spend less time on
CB than CBers who do not use the net.
Out of those who use the UK group, one is about 10 miles away, one may be
about 28 miles north... and the rest are scattered across the UK. Not
exactly my back yard.

I would be surprised if ANYONE on here is part of any local problem the "AKC
members" may have. Maybe they should learn how to target their efforts
better, and clean up their own back yard first.

Brainbuster.

As Bert says, "Bravo!".

No one is trying to restrict your free speech, Jerry. It is rather odd that the #1 topic for tech discussion concerns equipment not "appropriate" (that's putting it mildly!) to the citizens band. As Sparky says, there are TONS more topics that would actually be helpful and useful to CBers that you guys avoid like the plague. What's with that?

Wow, really? CBers with 4 watt radios will pay $170 (just for the
slug) to
"show off" that the Bird meter can measure up to 25,000 watts? Does it
say "25KW" on the slug? The standard elements acccording to AES
catalog (list price) are $75, that's anything up to 5000 watts. Is
5000 watts considered "too small of a margin of safety" by 4 watt
CBers?

>The speed rating of
> tires are far in excess of the legal speed limits of all out states,
> yet they provide them anyway.

Oh I see. For a 4 watt CB you need a 5000 watt rated meter. That would
be like having tires rated for 85,000 psi, or a car that had a top
speed of 100,000 mph.

From: stewartx@sccoast.net (Dwight Stewart)
Landshark wrote:
These sidewalk Perry Mason's don't know
anything. It is not a felony to violate
most FCC rules. If you notice they can
only fine you, not one mention of jail
time, how come Perry?

That's because you're looking in the wrong place, Landshark.
The Code of Federal Regulations...
http://www.access.gpo.gov/nara/cfr/cfr-table-search.html
...which contains Title 47 (the FCC regulations), does not
cover criminal matters. To learn about criminal offenses, you need to
look elsewhere. For example, the U.S. Code...
http://www4.law.cornell.edu/uscode/
...which establishes the FCC (and it's regulations),
contains a number of provisions affecting radio and radio operators. A
number of those include a criminal conviction, with "jail time," for a
violation of that provision.
For example, U.S. Code, Title 18 (Crimes and Criminal
Procedure), Part One (Crimes), Chapter 65 (Malicious Mischief), Section
1362 (Communication lines, stations or systems)...
http://www4.law.cornell.edu/uscode/18/ch65.html

"Very informative, D-man, pertinent, and pretty accurate, too. Now the
"clauses" or "loopholes" ought to be expanded upon."

...says...
Whoever willfully or maliciously
injures or destroys or attempts willfully or

"Please make note of the words, "Willfully" and "Maliciously." They were
not thrown in there because they needed a couple of adverbs...it is
extremely difficult to prove a willful, malicious act by merely talking
dx."

maliciously to injure or destroy any
of
the works, property, or material of any
radio, telegraph, telephone or cable,
line, station, or system, or other
means of communication, operated or controlled by the
United States, or used or intended to be used for military or
civil defense functions of the United States, whether
constructed or in process of
construction, or willfully or maliciously interferes in

any way with the working or use of any
            such line, or system, or willfully
or
            maliciously obstructs, hinders, or
delays   the transmission of any communication over   any
such line, or system, shall be fined   under this title or
imprisoned not more
            than ten years, or both.

"Even the worst offenders are given notice to clean it up."

The radio frequencies are a means of communication controlled by the United States. We, as individuals, are simply licensed to use those radio frequencies by a government agency. The part about "willfully or maliciously interferes" in any way with the use would cover freebanding

"I disagree. Care to cite a reference or example other than your own interpretation?"

(which interferes with the use of a frequency by the station authorized by the United States through the FCC).

"Again, you would have to prove, beyond a reasonable doubt, the user was not only aware of the frequecy being owned/operated by another party, but that the operator was intentionally and willfully attempting to impede, or actually impeding the transmission with prejudice. Don't take my word for it, check it out yourself."

 But there is more. U.S. Code, Title 47 (Telegraphs, Telephones, and Radiotelegraphs), Chapter 5 (Wire or Radio Communications), Subchapter One (General Provisions)....
http://www4.law.cornell.edu/uscode/47/ch5.html
    ...establishes the FCC and it's regulations. Section 501 (General Penalty) of that Subchapter provides a blanket penalty for any violation of that code, including the FCC regulations established by that code. It says...
            Any person who willfully and
knowingly
            does or causes or suffers to be done
any   act, matter, or thing, in this chapter
            prohibited or declared to be
unlawful,
      or who willfully and knowingly omits or
            fails to do any act, matter, or
thing in   this chapter required to be done, or
            willfully and knowingly causes or
suffers   such omission or failure, shall, upon
            conviction thereof, be punished for
such   offense, for which no penalty (other than   a
forfeiture) is provided in this chapter,   by a fine of not more
than $10,000 or by   imprisonment for a term not exceeding one
  year, or both; except that any person,

having been once convicted of an
offense punishable under this section, who is
subsequently convicted of violating
any
provision of this chapter punishable
under this section, shall be punished by a fine of not
more than $10,000 or by imprisonment for a term not exceeding
two years, or both.
Note that the fines above are based on a criminal conviction
and are in addition to fines collected through forfeiture under FCC
regulations.

"Yup, for the truly hard headed and feeble minded."

Also note that the provision above is only one example - there are a
number of other provisions with penalties throughout that Subchapter.
It is rare for any radio related offense to ever reach the
level of a criminal conviction - there is a long process (notification,
forfeitures, etc) laid out in the FCC rules that has to be done first.
But, as seen above, it is certainly possible for certain radio
violations to eventually reach the level of a criminal conviction.
Dwight Stewart (W5NET)
http://www.qsl.net/w5net

"Why Dwight, you truly amaze me sometimes. You may try educating a few
laming around here lamenting the state of cb. They not only have us
convicted of felonies for our speech content, but engage us with exotic,
lurid tales of the freeband/amplifier torture prison, culled from the
resentment that resides deep in their imaginative and fertile psyche."

Bert, You wouldn't use a 10 kW slug to read a 100 watt signal, could you
sure but the accuracy and the resolution would not be real good, a 1.5 kw
signal would be best read on a 2500 watt slug. This is a little different
than a speed rating on a tire in fact that is a bad analogy.

Aaron the needle would not even move if 4 watts were put thru a Bird with a
5, 10 or 25 kw slug. The idea is to keep the reading in the center of the
scale for a 4 watt signal a 10 watt slug would do just that. For a 100 watt
signal a 250 watt slug would do just that...More CB Myths Created.

Hi Moparholic...

I have noticed that the views he posts here are not shared by the rest of the groups population. But Dave has a right to his views, even if they can sometimes seem slightly extreme.

At least his "solar flare" view shows a trust in God that is not shown by certain "religious" groups. Dave obviously trusts that if God wants someone dead, he will do it himself... whereas scumbag terrorists believe in a God who needs their help.

The events of September 11th reminded us all of how close our two nations are, and how much we can rely on each other when we need to. I hope we never forget these things.

Brainbuster.

Let's face it, there must be more Mooslims here than in Afghanistan.

Just been a report on the news about an English chap who says he is going to Afghanistan to fight FOR the Talliban. Strange how he hid his face in a rag, and every time the rag started to slip, he quickly moved it up.... scared someone will recognise him??

Maybe one of your pilots could "drop him off" on their way past.... he could hitch a ride on one of the bombs as they are dropped.

Brainbuster.

I asked Bert why Cbers with 4 watt outputs would use 25,000 watt slugs
and he said the ratings are just a marketing gimmick and the meters
are accurate over a wide range of power inputs (see below). I don't
get it. Why would Bert, who is generally accepted to be truthful, lie
about such a thing? Gosh, now I don't know who to believe.

3207. Fm Business radios ?

Newsgroup: rec.radio.cb
Date: 2001-10-26 21:47:50 UTC
From: Speedy <racinghomer@hotmail.com>
Message-ID: <9rcet2uv1@ins22.netins.net>
Source record: 102098

I was just wondering what the proper newsgroup would be for these radios or
if we have a radio expert here that I may speak with.
Thanks a million,
Speedy

>Just think, they would ask you for your real name and by law you'd
>have to give it to them.

Why would that bother me? Conversely, you can bet if they contacted Twistedhed, Peekaboo, Train, Toll, Mopar, etc. etc. etc. there'd be some REAL crying and weeping.

>Your fake Aaron Voobner name would have to go in the
>trash basket. To bad they'd never bother to contact a bafoon like
you.

Well either you want them to contact me or you don't. Make up your mind.

: Skipp: "You're in trouble now, Aaron! The FCC is gonna contact
you!You

else
: - or else - it's FRAUD, yeah, that's what it is!"
: -Aaron-

>Another off topic diversion, of which you seem to do pretty well for
the
>most part.

I thought the topic was the FCC contacting me. If it isn't, then feel free to get us back on track.

>When you start using your real name, then people might consider your
>trolls as something worth more than toilet paper.

So we can consider the posts of Twistedhed, Peekaboo, Train, Toll, Mopar, etc. etc. etc. as not worth toilet paper?

Thanks!

-Aaron-

(Sorry if this is a repeat)

BAD AMERICAN

Written by Ted Nugent, the rock singer and hunter/naturalist, upon hearing that California Senators Barbara Boxer and Diane Feinstein denounced him for being a "gun owner" and a "rock star". This was his response, after telling the senators about his past contributions to children's charities and scholarship foundations, which have totaled more than $13.7 million in the last 5 years:

I'm a Bad American-this pretty much sums it up for me. I like big trucks, big boats, big houses, and naturally, pretty women.
I believe the money I make belongs to me and my family, not some midlevel governmental functionary with a bad comb-over who wants to give it away to crack addicts squirting out babies.
I don't care about appearing compassionate.
I think playing with toy guns doesn't make you a killer.
I believe ignoring your kids and giving them Prozac might.
I think I'm doing better than the homeless.
I don't think being a minority makes you noble or victimized. I have the right not to be tolerant of others because they are different, weird or make me mad. This is my life to live, and not necessarily up to others expectations.
I know what SEX is and there are not varying degrees of it.
I don't celebrate Kwanzaa. But if you want to that's fine; I just don't feel like everyone else should have to.
I believe that if you are selling me a Dairy Queen shake, a pack of cigarettes, or hotel room you do it in English. As of matter of fact, if you are an American citizen you should speak English. My uncles and forefathers shouldn't have had to die in vain so you can leave the countries you were born in to come disrespect ours, and make us bend to your will. Get over it.
I think the cops have every right to shoot your sorry butt if you're running from them after they tell you to stop. If you can't understand the word 'freeze' or 'stop' in English, see the previous line.
I don't use the excuse "it's for the children" as a shield for unpopular opinions or actions.
I know how to count votes and I feel much safer letting a machine with no political affiliation do a recount when needed.
I know what the definition of lying is, and it isn't based on the word "is"- ever.
I don't think just because you were not born in this country, you qualify for any special loan programs, govt's sponsored bank loans, etc., so you can open a hotel, 7-Eleven, trinket shop, or any thing else, while

the indigenous peoples can't get past a high school education because they can't afford it.
I didn't take the initiative in inventing the Internet.
I thought the Taco Bell dog was funny.
I want them to bring back safe and sane fireworks.
I believe no one ever died because of something Ozzy Osbourne, Ice-T or Marilyn Manson sang, but that doesn't mean I want to listen to that crap from someone else's car when I'm stopped at a red light. But I respect your right to.
I think that being a student doesn't give you any more enlightenment than working at Blockbuster or Jack In The Box.
I don't want to eat or drink anything with the words light, lite or fat-free on the package.
Our soldiers did not go to some foreign country and risk their lives in vain and defend our Constitution so that decades later you can tell me it's a living document ever changing and is open to interpretation. The guys who wrote it were light years ahead of anyone today, and they meant what they said - now leave the document alone, or there's going to be trouble.
I don't hate the rich. I help the poor. I know wrestling is fake. I've never owned, or was a slave, and a large percentage of our forefathers weren't wealthy enough to own one either. Please stop blaming me because some prior white people were idiots - and remember, tons of white, Indian, Chinese, and other races have been enslaved too - it was wrong for every one of them.
I believe a self-righteous liberal Democrat with a cause is more dangerous than a Hell's Angel with an attitude.
I want to know exactly which church is it where the "Reverend" Jessie Jackson preaches; and, what exactly is his job function.
I own a gun, you can own a gun, and any red blooded American should be allowed to own a gun, but if you use it in a crime, then you will serve the time.
I think Bill Gates has every right to keep every penny he made and continue to make more. If it makes you mad, then invent the next operating system that's better and put your name on the building. Ask your buddy that invented the Internet to help you.
I don't believe in hate crime legislation. Even suggesting it makes me mad. You're telling me that someone who is a minority, gay, disabled, another nationality, or otherwise different from the mainstream of this country has more value as a human being that I do as a white male. If someone kills anyone, I'd say that it's a hate crime. We don't need more laws! Let's enforce the ones we already have.
I think turkey bacon, turkey beef, turkey fake anything sucks.
I believe that it doesn't take a village to raise a child-it takes a parent with the guts to stand up to the kid and spank his butt and say "NO!" when it's necessary to do so.
I'll admit that the only movie that ever made me cry was Ole Yeller.
I didn't realize Dr. Seuss was a genius until I had a kid.
I will not be frowned upon or be looked down upon or be made to keep silent because I have these beliefs and opinions. I thought this country

allowed me that right.
I will not conform or compromise just to keep from hurting somebody's feelings. I'm neither angry nor disenfranchised, no matter how desperately the mainstream media would like the world to believe otherwise.
Yes, I guess by some people's definition, I may be a bad American.
But that's tough.

Ted Nugent

P.S. from Scott:

I'm sure if you asked Ted, he'd say it's all right to use a clean amp to make sure one is heard on the CB band. He'd probably say OK to freebanding on the upper channels as well, just stay off the lower ones.

Priorities are the easy part. The trick is when you get out to #38 is to
realize you aren't ever going to get there and declare about 8 to the end as
posteriorities which you refuse to entertain at all so as to have time for 1
thru 7. Learning to say no is a very adult quality.

When did I ever say I was N7VCF? Show that post, twist. Or how about
Glenn Sparks? I didn't come up with any of that, you did. But I can
see that you are in one of your delusional states right now, since
you seem to think you can see my checkbook and inside my house. Have
you been calling Miss Cleo? Or are you just using 'the force'?

>-Aaron-

Aaron,

Who decides exactly what's appropriate, you? I believe the majority (on this newsgroup) have spoken. While I'm certainly no big fan of illegal amps, I am a big fan of people's rights to discuss them on a newsgroup. Although they are illegal to operate, they are not illegal to discuss. The fact that they DO exist in the realm of CB means that they are open for discussion. Take care and 73.

>CBers?
>

How about $350.00+ for a clean Cobra 200GTL? BTW, this sold for $595.00 back in 78, you figure what kind of "feel-it-in-the-budget" factor that comes out too. How about an ARF-2001, or a CPI class rig? The new Galaxy goes for about $300.00, unless you catch a sale.

I will give the Devil his due though. I really didn't want to use a Radio Shack meter with that FT-757GX back in the 80's. Take it easy, Aaron.

That's ok Aaron, I already conceded the point earlier. Besides, I run sideband...what's a little 24,988 watts in reserve between friends. ;-) Take it easy.

Hey, many Viking descendants have dark skin and dark features, that's
nothing out of the ordinary. If you look at the photo of my Dad you
can see he has a darker complexion, and since Fernald is my Mother's
brother it makes sense he is lighter skinned.

Why the sudden interest in skin color fellas?

Yeah I noticed that, too. But he might be using "Keyclown
Logic"...that is, HE doesn't do keydowns but his TRUCK does.

I'm not Frank. You must be feeling very guilty. But if I were you I'd
be guilty too. Your careless accusations of child molestation resulted
in the termination of a basic electronics program that benefited inner
city teens. But that's something you'll have to live with.

> > Neither has came to fruition,so keep your tears to yourself,chump.

Fruition. The word is fruition.

> > I laugh at you,and I'm sure you know,most everyone else does too..8-))

Define "everyone else" :)

Wow, Thats great a 10 kw slug would be perfect under my analogy because it puts it right in the center of the meter. Is that a 3 kw penis extender? You sure need one.

Would you like to put your penis on the antenna with one hand
and hold the car body with the other hand while the radio is
keyed up? Guaranteed to extend your reach.

Hey Mark,

The "new e-mail" post is a forged message. Just use the E-mail address listed on QRZ under my callsign and then you can't get spoofed by somebody pretending to be me. That E-mail address is redirected to what ever E-mail account I want to use at the ARRL's server end. I'm the only one that can change that address redirection by the way. When ever I want to get a hold of a Ham by E-mail the first thing I try is 'their callsign'@arrl.net, and if that doesn't work I'll have to track it down some other way. That's the way just about everybody does it.

It's a forged message Mopar. At least you were awake enough to be suspicious about it.
Whether that address really exists or not is another question, and who if anybody responds.

Why don't you have PhilC run a trace on me then Mopar? He did on another poster to this group. Seems like he has a buddy that can get hold of the posting log files. So unless he 'doctor's' the results there will be many very disappointed people on this news group, all of whom will have to confess their apologies. Why sit around and guess when you can find out for sure. Or are you along with the likes of Twisted and company too chicken to discover the truth?

Good grief, Dave. It was a mistake. It happens. It was late. I was in a rush to finish all the messages I was trying to respond to that night. I saw an unfamiliar callsign and, without thinking, quickly checked it out. In my rush, I didn't notice the UK in his address, nor did the callsign register in my mind as a UK callsign (mainly because I was focused on the US because of the town mentioned in the message). But, I realize none of that is a real excuse, so I acknowledged the mistake and apologized for it (to the thread and to the individual). And I apologize again here. It was a mistake and I'm sorry for that.

Now, that is all I can do about this. If you want blood, then you'll have to pay for the UPS shipping. :-)

How ya doin Karl. I see you are making money from "export" radios.
FYI.

-Aaron-
ï¿½
The FCC has issued a friendly reminder about those HF transceivers
ostensibly marketed for "amateur" use, but actually designed and
intended specifically for the so-called "freeband" radio operators,
who operate primarily in the 26 to 28 MHz frequency range.
ï¿½
In a May 13 Public Notice, the FCC points out that it's a violation of
FCC regulations to import or market a transmitter designed or intended
to operate outside the amateur bands unless the equipment has been
issued a grant of equipment authorization for the radio services it's
capable of operating. The FCC says it wanted to clarify its rules on
equipment that's "intended to operate in various radio services in the
high frequency radio spectrum, including '10-meter' Amateur Radio
Service (ARS) equipment." The notice--directed to "manufacturers,
importers, vendors and users of these transceivers"--emphasizes that
transmitters intended for use by FCC-authorized radio services except
the Amateur Radio Service must be type-accepted.
ï¿½
In the words of the Public Notice: "The Commission considers that the
transceivers discussed above are intended to be operated on
frequencies where the use of type-accepted equipment is required,
because of the simplicity of modifying them to extend their operating
frequency range."
ï¿½
The FCC also noted that it's illegal to import, market or operate a
transmitter that requires a grant of equipment authorization but for
which no grant has been issued, and that it's a violation to transmit
on frequencies allocated to a licensed radio service "without the
appropriate Commission-issued station license." Violators could be
subject to fines or imprisonment as well as equipment seizure and
forfeiture.--FCC

> talking dx."

Very true, Twisted. But remember these provisions of the US Code do not kick in until after all efforts under FCC regulations have been exhausted first. In other words, before a person would be charged under this, the FCC would have already sent a Notice of Apparent Liability (describing the violation), fined the person under the forfeiture clause, and so forth. After that process, it would be pretty hard for a person to convince a jury that a continued violation was not willful or malicious.

>
> "I disagree. Care to cite a reference
> or example other than your own
> interpretation?"

I cannot. I'm not making a statement of legal fact (that is the role of the courts). It is simply my own interpretation of that provision. However, since the provision covers "line" as a means of communications, it is also clear that radio, which has replaced "line" in many incidents, is also a means of communications (besides, the provision specifically mentions "radio" repeatedly). Since the provision also mentions "interferes in any way with the working or use of any such line, or system..," it is not hard to make the jump that a

person operating on a radio frequency he is not licensed to use is interfering with the "use" of that frequency by the authorized user. If that is true, then it seems obvious this provision could apply to that situation.

> "Again, you would have to prove,

> being owned/operated by another party,
> but that the operator was intentionally
> and willfully attempting to impede,
> or actually impeding the transmission
> with prejudice. Don't take my word
> for it, check it out yourself."

I disagree. You don't have to prove the person was aware the frequency was used by another party. All you have to prove is that the person was aware the frequency is not there for him to use - that he was aware of the violation. The procedures under FCC regulations (Notice of Notice of Apparent Liability (describing the violation), forfeiture fines, etc) would clearly establish that the person was aware of the violation.

Well, that is certainly not my intent. I strongly believe a person should be free to talk about whatever he or she so chooses. My message was in response to a specific comment about the law. I responded solely to that specific comment.

ATTENTION: "SKIPP (no last name)":

Go ahead. Rush to defend "free speech" but miss the point entirely.
Your post wrongfully assumes I am trying to say this discussion is
"illegal".

First of all, nowhere did I say that the discussion is "illegal" or
that I was trying to prevent it. For the brain damaged among you, I'll
repeat this again:

Discussion is not illegal.

If you read my initial post what I said was that a bunch of HAMS
holding an amplifier discussion in a CB NEWSGROUP is not appropriate.
I just don't understand WHY a group of HAMS feel compelled to LEAD a
discussion about gear that CBers are prohibited from using.

You say this discussion is posted for people "to learn" from? If so,
you are teaching a very limited curriculum. There is so much more to
the radio hobby than AMPS. Why not, as Sparky suggests, lead
technical discusions that are USEFUL and RELEVANT to CBers?

-Aaron-

> exist in the realm of CB means that they are open for discussion. Take care and
> 73.

I think you have missed a very importand point here, Mark. The Citizen's
Band has a specific definition, with boundaries in frequency, power,
modulation types, licensing requirements, and use. I shouldn't need to
draw a Venn diagram to point out that operation beyond those boundaries
necessarily means that it is no longer within "the realm of CB".

As I pointed out a couple months ago, RF pirates have much more in common
with hams than they do with CB. They have more power, more freqs, more
modes, and they even have similarity of callsigns. Certainly, a discussion
of amps is more appropriate on a ham newsgroup than on rrcb.

And to say that anyone is trying to supress a person's rights is absolutely
ludicrous. There are over 48,000 newsgroups and thousands of other forums.
If they want to exercise their rights they can go to alt.freespeech and
discuss their amps. They might even become the majority there. Does that
mean their discussions are appropriate? No, because that's not what that
newsgroup is intended to discuss. Nor is this one.

> Sparky Exactly, Just the same as Moped doesnt complain about Timmy top
> posting yet he has a bird if I do. There seems to be 2 sets or rules
> Keyclowns rules and all others.

Hi Mr. Itsallgood...

Are you suggesting that I am a "Keyclown"?

OK... lets give your brain (and Sparkys) a bit of a jog...

1.
I had not made ANY posts between the message in question, and your message above. So it is safe for anyone with a brain to assume that I had not yet read the post. I do not sit on this newsgroup all day, like some of you guys. You will even find that I do not always post every day.

2.
If you look through my posts, the average time for me to reply to a post is over 42 hours. This message was only 21 hours old when you replied to Sparky. As I have blocked Sparky, you will know better than me how soon he jumped to his conclusion... he really is too keen to "run his yapper".

2.
Personally, I do NOT see a comparison... just an opinion, and a question. I am sure that Aaron can answer a simple question for himself.... when his "gentleman friend" will let him speak for himself.

3.
A "follower" of Bin laden does not have to be a terrorist. Michael Jackson has plenty of "followers"... does that make them all singers?

4.
I don't generally complain about yours or lelands posts. I have had serious debates with leland, and even agreed with some of your posts.... So maybe this makes me an "AKC".

5.
Sparky really should check his facts before "running his yapper".

6.
You really should be more selective about who you are willing to follow off the edge of a cliff. Don't expect Sparky to save you... he only cares about "number one".

Actually, I think Sparky is just p***ed because I blocked him, but he hasn't got the b**ls to block (or ignore) those messages *he* doesn't like.

You will notice that he does not limit his insults and foul language to "illegal CBers", any newsgroup user is fair game. Disagree with him just once, and you could also be on his list of targets.

Regards,

Brainbuster.

Yes that a good call all right, I have some unused cooper board that I
can cut for the layout and mounting of the transistors, if nessessary.

> The bias is set using the mfgrs recomended values (off the data sheet).

Yes I have a variable power supply, that can be used. But will want to
go to an on board circuit, with a voltage regulator, and pass transistor
or two.

The Class A bias voltage & current will not be applied during the none
PTT time, so I hope the transistors will not heat up to much. Yes again,
that would be neat-Oh to have a Dial-O-Matic Bias, and watch the
envelope on a scope while listening to the audio from a attenuated
receiver.

THe "Radio Frequency Transistors" book by Dye and Granberg, available at http://www.rfparts.com/ is worth its weight in gold, and the bias circuits are even shown..... Bitchen!

Well all well and good, got to get ready for the TRW swap meet, theres a van of distinushed radio enthusiast, scientists, researchers, development specialists, engineers, technicians, and all the rest are just common Hams and CB'ers, we will have a blast! No doubt, the only thing we'll talk about is hot honeys, and linear amplifiers! A compete Class A group, hope we arn't invited NOT back at Denny's again.

TRW Bound.....

Jay in the Mojave

Want do you want ..... I want Rock & Roll

Hiya Mike, twithed's Master here.
I am sorry. We were cleaning his cage and he escaped. If you wanna read what twithed posts in disguise look up the word "chickenhawk". He posts in disguise calling people that name. He uses "1mangang" as his alias. It has been proven with IP traces that it is twithed.
He quit posting "chickenhawk" stuff on here, since webtv spanked him for doing it a few months back.
Also, the words posted previously by sparky, repeated below, are accurate.

> Twistie thinks there is one person that is out to get him and is using
> a bunch of different aliases. He probably thinks you are me, or Voobner,
> or Leland, or... who knows, who cares. Just ignore him, he doesn't post
> anything useful or helpful anyway.

Well, Peakaboo,

It's the idea that someone is going to try to tell me what I can say or not say. Hey, I find the theory discussion educational because I CAN legally use it later perhaps. The thought just occurred to me that the reason certain ones try to suppress free speech is because they have worried the Fed so much with countless emails and flooded them so, that they no longer pay attention to him/her/them--whatever. The "cry wolf" scenario.

The fact that Twistedhed and I can debate freebanding courteously and not get a flamefest started shows that the readers of this group WILL, indeed, tolerate objections to "illegal" stuff IF the person objecting does so in a respectful manner--objecting to the activity and not insulting or putting down the readers. Looks like Aaron would've gotten the idea by now.

73

One last comment then I'm outta this thread.

First of all, find where I have aided, abetted, or even answered a question regarding amps on this newsgroup. I do not do so because, yes, it isn't supposed to be a part of CB radio.
Reality is, amps are a part of it whether we like it or not. It still is NOT illegal to talk about them.
Here's a kicker for you: two CBers standing at a swap meet discussing amp theory, and R. Holl-
ingsworth walks up. He'd likely join in! It is NOT illegal for two citizens of this wonderful country
to talk about amps. It is not illegal for people to talk about drugs. Your antagonistic attitude towards people is doing more harm than good, but you'll never see that.

Jerry

Hi Mark,

From what I understand, it is both distance and country border.
But this still cuts out the "size of country" theory, as they could still
have included the distance part.

It is possible that the use of 4 Watts and FM only affected the decision.
It may have been that DX is not reliable enough to be a threat to telephone
services.
Maybe they just didn't think that it was worth having a law that was so hard
to enforce, and where violation was impossible to prove in a court.
It could even be that the people who set the original rules didn't even
consider this factor.

When the original rules were made, things were different...
Telephones were under the control of the "GPO" (post office).
Radiocommunications were dealt with by the GPO.
The "RA" and "BT" did not exist until privitisation.
The investigation department was "PORIS" (Post Office Radio
Investigation Service) and is now the "RIS" (part of the RA).

Who knows why they made the decisions? Maybe they tossed a coin :~)

Regards,

Brainbuster.

3304. Re: What is a "Keyclown"

Newsgroup: rec.radio.cb
Date: 2001-10-27 16:01:12 UTC
From: Mike Bleiweiss <mbleiweiss@laurelholdings.com>
Message-ID: <ttkc5pg42gci9f@corp.supernews.com>
Source record: 102279

Pretty much what I figured, no evidence to back up what you say,
just a bunch of paranoid heresay. I asked you to tell me what "troll"
posts you were referring to, and you have none. I used to hold you
in some respect - you've helped me a lot in the past with technical
issues, but now I see why everyone else around here thinks you're a
dumbass. What I am IS well documented among the pages, just a
CB hobbyist who has from time to time asked questions or asked
for help - just do a search on my posts in this newsgroup and you'll
see for yourself.

Lipitor? Ummmmm.... uh huh. Isn't that some sort of cholestoral
medicine?

It's kind of entertaining to come back after a busy day at work, and
a Friday night out on the town, sit down at my computer before bed
and see that you and a couple of others have been at your usual
24/7 activity - thumbing your ass, thumbing your mic, and pursuing
stupid flame wars that are completely unimportant, and immature -
and have absolutely no meaning whatsoever.

I don't know who your delusions tell you I am, but I can assure you
that I've never written anything in this newsgroup signed by any other
name than the one I sign my checks with, Mike Bleiweiss. Not that
I really care who you think I am or not.

Anyway, I'm wasting my time humoring your childish and unprovoked
games - I'm going to bed. I'll check back early next week when I
get some time to see what you and the likes of "Train" have been spending
your weekends writing in this n/g in response to this post - most likely
more of the same:

"You take lipitor!" "Your name isn't really Mike!" "I know who you really
are!" And other retarded statements not backed up with any type of fact.

I've never taken sides in this n/g with anyone, I've stayed neutral, and
left
my opinions out. Especially with this whole keyclown/anti-keyclown
crap. I've taken a side now - MY side, which is the side of people who
think that bored morons who sit in rec.radio.cb all day long looking for
pointless fights to pick, need to join the Darwin's List.

Good evening, and may the rest of you have a good weekend!

>>>>>

"Ok, I'll say it for you. You need reminded of your snide comments and
trolls you have lent yourself to? Don't worry, "Mike" or whoever you

call yourself, what you are is well documented among the pages, so don't come off as a bipartisan innocent."

you or that I like keyclowns, or whether I myself am a keyclown or not - in case anyone is about to mistake my statement above for something offensive.)

"It's no mistake, son. Your not as incospicuous as you would like some to believe. Now go take your Lipitor."

Many of the VHF "dot" frequencies are now called "MURS", multi
use radio service, and are now covered under Part 95. Since Part
95 is CB, this would be the place for discussion.

Sparky, twithed envies you. He makes up things about you and the rest of us so he can fantasize that he has some connection to us other than being our usetoy for amusement. It's like a obsessed fan getting goofy. I bet he keeps newspaper clippings of every story on Pat Sajak too. Oh well, he has to have SOMETHING to do after coming home from a hard day at the truckstop.

Sparky posted with admirable truth and accuracy, in response to the goofy feminine dribblings of queen twithed:
>

1. They cannot stand to be reminded they are criminals.

2. Reading Anti-keyclown posts interferes with mass delusion that they are "OK".

3. Anti-keyclown posts way beyond their intelligence levels-incomprehensible.

4. Not yet ready to come out of closets yet, don't like it that we know.

5. Get aroused when reading "furnace tape and hamsters" posts.

6. Takes too much time to read the posts-need to read gay newsgroups too.

7. Need extra time to browse gay personal ads.

8. Afraid moms will look over shoulders and discover their fetishes.

9. Scared of people hugely smarter than they are.

10. Don't like being picked on by heterosexuals.

3320. 11 Meters L.O.T.A. (Lighthouses On The Air)

"That's easy to explain. As another poster a short time back said about Part 95 rules "I don't care", well you see what happens when that mind set gets applied in a different context. It is very apparent they,=20 the terrorists, didn't care about human life either,=20 including their own. "

Regarding the WTC attack on 9/11/01

>>>>>President's Office : 14 CQ 001 JOHN E-Mail address : cq001john@aol.com Fax : 33 (0)4 74 03 69 80 Sites : http://cqdxgroup.free.fr http://lota.free.fr
CQ CQ CQ::: CALLING ON ALL DXERS
Recently we gave birth to a DX Group of a new kind, born from the (very deep ! !) reflexions of a group of Dxer friends, whose first avocation is innovation and conviviality on the air, quality of the contacts and of their confirmation. Indeed some will answer us that there already is a plethora of DX Groups, so additionally to being a new Group we will try our best efforts to bring something new to our beloved hobby. But what can still be new on 11m, and after asking ourselves this question we came to the answer that all had not yet been done , the best example being the success encountered by the DR Group with their Castles activations..
Seeing the enthousiasm among our cousins radio hams for the Lighthouses activations, and also that this kind of activity had never outside some rare and particular initiatives been practized on 11m, we decided to introduce them to our band as well, there are lists of Lighthouses in many places and we adapted them to our needs. So far they encomprise over 7000 lights over 6 continents and we have still a long way to go to complete them, so there is ground for lots of activations still even as the propagation is in a diminishing cycle ! !
These listes are at the disposal of anyone who asks for them, we are not more owners than neither are we going to do these activations all on our own, and here You all will have Your role to play, be You independent Dxer, affiliated to a Group of whatever size, You even are all welcome to be part of our Group if You wish so, everyone can do such activations, we on our side are founding a QSL Bureau able to take charge of editing QSL cards and

replying to any activations, or the different Groups existing may also manage them by themselves, we sure do not wish to supplant the need for DX Groups ! !
Let us also think for a moment that Lighthouses have for centuries been guides for seamen, some of them are real pieces of architectural art and they need to be protected from destruction in some cases. Also the Lighthouses are most often on IOTAs and some even are inside rare divisions, so there will be enough to satisfy all amateurs of beautiful QSL cards or divisions chasers. So we do send an invitation to all the Radio operators in order to take part , and then we will have done something positive for 27Mhz in general.
Indeed anyone who would like to join us in this venture is most heartily welcome to do so, we are not an elitistic Group boasting of any exclusivity, quite the opposite, we would like to bring something to RADIO ! The adhesion is yearly renewable, costs 25 US$, 25 Euros or 150FF and will give You a CQ call, 20 QSL cards of Your choice, the use of our Po Box and the right to make or take part in Lighthouses activations, get personal QSL cards printed with the use of our LOTA logo. When our financial means will allow for it we will edit a booklet containing tons of info, lighthouses lists, IOTA lists and plenty other useful infos such as QSL Managers and groups addresses lists. The call is made, and the door is open to anyone with a good will ! ! ! We also stand at Your disposal for any complementary informations if needed, don't be shy to ask us Your questions ! !<<<<<

After one NG reader was almost puking at the stupidity of the dribbling sputtering justifications, twithed was asked the following:

"Cut to the chase, twithed. Is it or is it not a federal offense to "freeband"?
A simple yes or no would do, but that dont work with you because you try every justification to support your criminality."

To date, the lightloafered little butt munch has said nothing in reply. Of course, this proves his inability to justify.

Hi Bob,

The question is not really "where," it's "are?" And the answer is no. All my gear is bought/worked on out of state. (NH) There is a place located right off exit 62 on the L.I.E. (495) that caters mostly to truckers. Not to "dis" truckers, but I believe you don't need much more to know what to expect. If you're travelling eastbound, get off at exit 62 and take the service road past Rt. 97. Make a right turn onto Waverly Ave. and it's approx. 1/2 mi. down on yout left hand side. I think the name is LPC Communications, but there's no missing it.

There is also P.M. Electronics on Jericho Tpke. in Humtington Station. Take Rt. 110 north to Rt. 25 (Jericho Tpke.) and make a right turn onto Jericho Tpke., it's about a mile and a half up on your right hand side.

Go down New York Ave. in Huntington Station (You passed it on your way to P.M. Electronics.) for approx. one and a half miles and you'll find B.C. Communications on your left hand side. They sell ham gear. No great selection and you have to dig, but there's an occassional bargain to be had thanks to the owners poor book keeping. He'll sell you a new Lincoln he had lying around for $225, (A steal!) yet ask $900+ for an old used FT-757GX. Go figure? Drop me an e-mail, and I'll steer you in the right direction for decent (not best) prices and SUPERIOR service. (...that more than makes up for the prices!) Hope that helped. Welcome to LI! Take it easy.

I figured it would come down to this.

(That and "free speech" hysteria. For the third and final time: no one said your discussion was illegal Jerry, merely inappropriate)

So criteria for what is acceptable is anything that's "part of it whether we like it or not"? Say it ain't so, Jerry! That opens the door to all kinds of unacceptable behavior becoming accepted.

hey tim, why is it these no code techs hang around here bugging cb
types??? at least chuckie got his general and de-assed the area , for
all intents and purposes...perhaps these no code tech akc guys can't
cut the mustard, so they stay on here whining about being stepped on,
while they try to transmit with their mudduck radios on their mudduck
antenna systems... etc.......

Hello Pusisha413fl:

I have seen the Wilson and MaCo V-Quads, but they only used two elements.

Not saying you couldn't add on elements, but I would think it would be difficult mechanically, and installation wise. The V-Quad Beam Antennas aren't the most popular antennas. The Yagi and even Quad beams are better beam antennas, in my humble opinion.

Take a look at these web sites, maybe they can help.

I stated talking on the CB airwaves when I was 17, and talked on the airwaves across the bands since. Untill three years ago. and if I have learned any thing it was this:

Most CB'ers (from my experiences) started out there careers in there teens and or younger. They lived a good portion of there lives playing on the air. Some learned to love talking sideband. Some learned to love the hash & Trash of the AM, and some seeked the wider band widths of Ham. All in I have taken this away from all my adventeures of working with radio communication: A good percentage of people on the radio are trash. Now different classes of trash, but in the end it's all trash.

If what we are talking about is a Delta Loop, essentially a three-sided Quad, I will second the emotion. The torque and leverage you can get with 12 foot elements in the wind will be tougher than hell on a boom. No surprise that boom length is pretty well limited to six feet.

Loops make decent simple antennas if the support is there. I used a point-down delta from the eaves of my ranch on 15 meters and it worked gangbusterly with the point only about 12 ft off the ground. A 72 ohm Q-section matched it nicely to 50. Do it as a vertical rectangle with the top half the sides (should be about 38 ft at 27.2) and it will match to 50 directly just taking about three 10" turns in the coax as a choke.

But as a beam, I agree with you; it is a structural bitchkitty.

Dick N&#65533;BK

Mmmmm - Don't see what any of these posts have to do with skydiving , but one thing I noticed
is that one of the posts refers to the fact that Isama gave a great speech surrounded
by adversity.....gee , I think a person called HITLER used to make great speeches
as well. Does that make him a good person? Somehow I think not.

INSANE PEOPLE CAN SOUND "VERY" SANE AT THE BEST OF TIMES.....

The bottom line is that this holy war as he calls it is TOTALLY against the teachings of the Koran ,
just like most religions save a few around the world that have been manipulated by power hungry
persons wanting their own way either present day or in the past.

I am very happy to be in the country I am in thanks......

Please leave and go to the Islamic country of your choice if you would like to prove
your beliefs.....there are a lot more people you would get along with there I'd think!

By the way , I take it you are not female?

When I get back to my paperwork I'll see if I can find my info for this antenna. Second I used to own one of these antennas. The radiating pattern and coverage of this antenna is highly characteristice of a 1/4 wave antenna. and the Radiating element is Roughly 9'.

Yes. It's a term that some CB operators like to use to make themselves
feel good about operating illegally.

It is a NewsSpeak term on the NewsGroup to denote certain Hatred of CB'ers by Rambo Hambo Hamateurs that are NOT happy when they key their mics (like a Clown), they isn't the Happy People like you & me. They isn't happy unless the WHOLE WORLD is like themselves in every way (miserable practicing pinkos, for the most part). Most of US out here ignore such BIG BROTHER lingo, 'cause we is da Citizens, and dis is da Citizens Band BAND !!!!! Dave!!

Hello Mad Dog: Yes I have done some field strength testing with the Golden Rod 45 Spyder. The mobile antenna with the mash potatoe looking hoops on the top.

It was within 1 dB of the measured field strength of a 102 inch whip, center loaded Wilson, a compation antenna with the big coil, a Franscis Amazer 96 inch Fiber Glass, and a few others we tested.

It appears that all these different type antennas, that are a 1/4 wavelength long, or have a loading coil, or Top-Hat like the Golden Rod, are all within 1 dB of each other.

I would love to hear from other guys who have tested mobile antennas. We used a small car with the antenna mount in the middle of the cars top. And simply changer antennas and then transmitted a barefoot carrier, for field strength measurements, with a 1 dB step attenuator in the receivers antenna path. After toe different locations all the antennas tested again the same all within 1 dB of each other.

This may suggest from a design stand point, that the base feed 1/4 wavelength antenna designs, may only have been tested for SWR, and bandwidth, and NOT field strength. After testing a few antennas and such, we tried just some scrap aluminum tubing, with different loading techniques, and every time we could tune the SWR to about a 1.3 or 1.2 to 1.0, saying that this is the natural 1/4 wavelength antenna SWR. Addational impedance matching was nessessary to achieve a 1.0 to 1.0 SWR, for all the big straps. Which most of the antennas do not have. Food for thought, ah. Design wise.

No, it is a CB'er that choses to use the FREE BAND, instead of the SLAVE band ! Now what would you rather be, FREE or SLAVE. I thought so. So UN-Communist your mind and attitudes and think FREE and Liberty, instead of Slave and Slavery. Remember Orwell said that Freedom is Slavery. Have we lost our God Given Liberty? DO we have a bigger police state since yesterday's laws being passed?
Dave!!!!!!!!!!!!!!!!!!!!

You're right. Repeaters are not designed to communicate with UK stations. Six meter SSB, moonbounce, or satellites, would be better options for that type of activity.

whens the last time you moonbounced anything? i'd love to see a pic of your antenna array and big illegal amp like most eme stations run. the satellites are cool too if you only need to talk for a minute or two at best and dont mind keeping your hand on the tuning knob the entire time.

Looks like Twisted, and group, are playing their dirty tricks again. Since he can't come up with a logical and coherent argument I see that the forging of messages posted in my name has reappeared. Seems like clockwork when Twisted can't formulate a logical rebuttal to my comments he disappears from the news group for a bit while the mysterious posts begin to show up. If you look closely they all have exactly the same theme. He still can't get it out of his system that somebody figured out how to spoof his posting style and made him look like a fool, and not that he in no small way deserved any different treatment. So he tries ever so hard to do to me what somebody else did to him. Funny how he forgets so quickly that nobody ever agreed with his crazy conclusions, and what he dishes out will sooner or later will come back to hurt him.

Sad to say but the post that started this thread is a forgery. If you really want to find more background then check out the "rec.radio.cb" news group. This is not the first time that myself, and several other Hams, have had messages posted using our callsigns and or names in an attempt to discredit our points of view in that group by a very persisted, and dirty handed, group of outlaw CB radio operators. The original post starting this thread is just one example of their tactics.

Hello 413:

I used a Drake R8 Communications Receiver, that has a analog S-Meter. The antenna for the receiver is feed to a 1 dB increment or step attenuator, that is placed in the middle of its range, so that attenuation in 1 dB steps can be added or subtracted, allowing the receiver operator to adjust the receivers sensitivity either up or down, allowing you to see just what a 1dB change will do. Granted its not the best but has proven it self many times as being pretty close.

The system can be double checked by the guy in the field, adding in a known value of attenuator between the tested antenna and radio. We use a 6dB attenuator, made from resistors, which shows up on the receiver at just a little over 1 S-Unit. And a small two pill amp that amplifies the dead carrier at 10 dB, approx 40 watts. So after the attenuator, normal, and amplified signal is tested by the guy in the field, we have a pretty good idea of whats ah happening.

What would be ideal, is using a Spectrum Analyzer, that has the opinion of seeing 1 dB, or even .5 dB to .1 dB per division changes in field strength levels. Maybe if we get enough mobile antennas, and different locations to test them all, we can rent a Spectrum Analyzer, and Video Tape all the goings on for copies to be made, we'll edit out all the name calling and stuff we do wrong.

Jay in the Great Mojave Desert, ...just down the road ah ways from the fillin station.

Thank you Jay, you were the only person that gave me any useful info on this antenna, i once saw a antenna with a vertical loop at the top which claimed to respond well to vertical and horizontally
polarized signals but i cant remember who makes it......The first time i saw it i thought it was a R.D.F.

Amazing.

Aaron, not a licensed amateur operator, but knows even the esoteric modes of communications.

Do we REALLY believe that Aaron is his real name?

Doubtful.

Good driver, yes.... Perfect, not really.

Perfect would be a Class AB. :)

for a
> 8 pill Class AB amp, of course with a padded input to limit the drive,
> and avoid the Class A driver from being over driven.

I would also put it in a seperate enclosure, since the gain of the Class A
is
so much higher than normal, your going to find problems (a la Messenger)
with the driver stage in the same box with it breaking into oscillation.

Have fun!

It isn't my job to go have to look for you. You asked, I provided.
Unfortunately, I
don't have a California Drivers Manual anylonger (been years since I lived
their), so
I can't scan it and show it. Mebbe we have someone in California that could
do
same?

>
> Now, since you claimed that speeding is a felony, but gave only one
> example but which had extreme conditions, can you give an example where
> speeding at any speed is a felony?

No, because it isn't. I gave an example. Don't try to regulate it into
something
it isn't. Someone said it wasn't a felony. I provided one example where it
is.

My point is made.

>
> The point is, Toll, that if you want to compare the crime you need to
> compare the punishment as well. And the punishment for speeding is a
> drop in the bucket compared to illegal CB operation.

You believe that. I know for a fact that repetitive reckless drivings will
enable you to lose the priviledge of driving a car. You call that a drop in
the bucket? Depending on where you live, that can cost you your family,
your job, your home (can't make the house payment if you can't get to
work!), etc.

It can be screwed for you.

Because it isn't required by law for me to do so on this forum.

When the FCC enacts legislation for me to correctly identify myself on the internet, I will. Until then, oh well for you Aaron.

doesn't let
> "laws" stand in the way of doing what he wants, when he wants,
> wherever he wants. Is that about right, Toll?

If I don't agree with them, no I don't.

Guess that puts me in the same boat as Geo. Washington, Tommy Jefferson, John Hancock and a few other notables, doesn't it? They didn't believe in the
laws, and rallied against them.

Of course, Abe Lincoln also chopped down a tree, and then told everyone he did. Guess some idiot could compare the two, as well.

Have a good one Aaron. Your getting farther and farther away from reality with
every post. Please go back and respond to the posts where you have been PROVEN wrong, but ran from, only to never post to again. We are ALL waiting!

I have known a couple people that where fined big time, and a VERY small
amount of people who actually went to court.
Otherwise, getting busted driving wrecklessly is
A. More dangerous to public health
B. Carries a larger fine than you get with freebanding.

Go online and see if you can find
the Marin Independent Journal or I think it's called the Marin IJ. The
CHP just did an illegal traffic break and caught some 30 motorcycles.
Two arrests and some
fifteen traffic violations, all classified as criminal and must be
present in court
with a lawyer.

Please cite where a Cb'er went to federalcourt for
violating part 95. I've known at least 6 individuals that had NALS, one
that had an inspector knock on his van window. Not a one ever went to
federal court and only one person had to appear at the FCC on Golden
Gate Ave in SF to show them his Uniden PC33 that the neighbors with
lousy electronics complained about.
I've know two people that got fined, both are idiots.
One keyed up a base station with a thousand watts next door to KQED
(public channel) the other lived next door to PacBell's main facility.
Those are the only people I have ever known to be fined, and very little
compared to the $10,000 to $85,000 that you and Voobsie cry about,
$1,000 & $1,200. Those are cheaper than a DUI now a days.

Landshark wrote:
These sidewalk Perry Mason's don't know
anything. It is not a felony to violate
most FCC rules. If you notice they can
only fine you, not one mention of jail
time, how come Perry?

That's because you're looking in the wrong place, Landshark.
The Code of Federal Regulations...
http://www.access.gpo.gov/nara/cfr/cfr-table-search.html
...which contains Title 47 (the FCC regulations), does not
cover criminal matters. To learn about criminal offenses, you need to
look elsewhere. For example, the U.S. Code...
http://www4.law.cornell.edu/uscode/
...which establishes the FCC (and it's regulations),
contains a number of provisions affecting radio and radio operators. A
number of those include a criminal conviction, with "jail time," for a
violation of that provision.
For example, U.S. Code, Title 18 (Crimes and Criminal
Procedure), Part One (Crimes), Chapter 65 (Malicious Mischief), Section
1362 (Communication lines, stations or systems)...
http://www4.law.cornell.edu/uscode/18/ch65.html

"Very informative, D-man, pertinent, and pretty accurate, too. Now the
"clauses" or "loopholes" ought to be expanded upon."

...says...
Whoever willfully or maliciously
injures or destroys or attempts willfully or

"Please make note of the words, "Willfully" and "Maliciously." They were
not thrown in there because they needed a couple of adverbs...it is
extremely difficult to prove a willful, malicious act by merely talking
dx."

That means, if you have been told that it is illegal to do operations out of
band,
and you do it, it is willful and malicious.

Take a look at the amended part 95, after they did away with licensing, and
you
will find that purchase of a CB radio, and oepration thereof, is agreeing to
abide

by all Fed regulations governing such service.

I never said I did moonbounce. All I said is that moonbounce would be a better option over repeaters for dx to the UK. As for myself, I haven't done any real dx in the last year or so. When I did, I primarily used SSB on the six meter band, though I have played around with satellite. Sadly, I don't have the place to do moonbounce even if I wanted to. Like many places today, antennas are frowned on so I can only put up the basics - four smaller antennas.

> she screwed with on your side of the pond is your problem.

You have to have been on this side of the pond, paying for the results of "Thatcherism" to truly appreciate the woman.
She told everyone to go out and buy their own home, and when they did... she increased the interest rate to the point where many lost their homes. Some even became homeless, as the councils refused to house people who "made themselves homeless" by not paying the mortgage they could no longer afford.
She Increased unemployment, and increased taxes to pay for it. She hid the increased unemployment by changing how the figure was calculated, and hid the increased taxes by very publicly lowering income tax, while quietly increasing other taxes.
I once saw a full page advert in a national newspaper, which stated how the public were being screwed. At the bottom of the page it said that the ad was placed there by the Tax offices.

At least the Tories made CB legal here, even if the initial rules did read like Maggie wrote them herself. Here's a good one that disappeared...
"No transmissions of a frivolous nature"

Labour had got such a bad name from the 1970s that the public preferred to put up with the Tories, rather than allow Labour back in.
Tony Blair may be young (for a PM), and he may not come across as a "hard man" (Maggie certainly did), but he was the first Labour leader since the 1970s that was considered good enough to take the power back from the Tories.
His backing of the US has earned him much praise... on both sides of the pond.

news:9rcs9t$619$1@delphi.ridgenet.net...
> Because they can...

True.

The meter I use only measures upto 1000 Watts, but also measures AM
modulation, and FM deviation.

The "AKCs" can scream all they like about how UK CB only allows 4 Watts, and
only on FM... but my meter is still LEGAL TO USE.

The fact that my meter COULD be used to measure power levels and modulation
that would be illegal to transmit on UK CB frequencies does NOT mean that I
transmit anything other than legal signals.

No matter what power a meter COULD measure, it does NOT transmit, it does NOT
boost the power, and so it CANNOT be used to break the law. Measuring power
is NOT illegal.

How do you "start" a killfile? Are there any aftermarket newsreader filters? I use CompuServe. but I anticipate switching to Optimum online.

Cross-posted to: rec.radio.amateur.misc,rec.radio.cb,rec.radio.shortwave

OK, OK, I *should* know better. This is really a dumb question, but I really don't know the answer:

If I have an audio RECORDING of a SSB reception from a non-SSB regular-AM shortwave radio, is there any way (digital or otherwise) to "manipulate" the recording to recover the original audio (voice)?

On my shortwave, I just turn on the BFO and tune around a little to hear it, but that function injects a carrier before it gets to the audio section of the receiver. I'm wondering if there's a way to decipher the audio without having the original radio signal.

Thomas

I don't see any way of this working.

A single sideband signal is only audio translated to radio frequencies.
When you receive it, you turn on the BFO (Beat Frequency Oscillator),
it beats against the incoming signal, and translates it back to audio.
If you don't have the BFO tuned right, you translate the audio to
the wrong frequencies, and it sounds funny (or, if you have the BFO tuned
too far off, you can't understand what's being said),

If you put an SSB signal through an AM detector, as you've done,
you haven't translated the RF back to audio, you've recovered the
amplitude variation of the incoming signal. It's a completely different
thing.

Now, if your audio recorder was able to record signals up into
the radio spectrum, and you had hooked that up to your receiver
before the detector, then you could play it back through a product
detector and BFO combination, and you would be able to hear what
was said.

Hello Mad Dog: Not a lot of help form the rraa side of things ah? Sure makes me want to go out and study morse code ,,,,,, NOT! After the 2003 ITU conference, when the morse code requirement will be dropped, the FCC will start include a personality test, for the Amateur Radio Service Testing that keep the goof balls out for while, until some makes a "U 2 can have a personality" Video tape.

Yes the loop type antennas seem to have a good ability to receive both Vertical and Horizontal signals. The "Vertical Antenna Handbook" by Capt. Paul H. Lee has a blurb about Quad Antennas having the ability to transmit and receive both polarities very well, since there an equal length of the antenna that is horizontal.

Maybe the antenna was the Gold Line Radio Direction Finding (RDF) antenna, try this web site:

http://www.gold-line.com/1043.htm

From a design stand point, makes me want to build a Quad Beam Antenna, and have a very low loss Impedance Matching device, such as a Torrid Transformer, mounted in line with the Quad Wire, and have the Driven element mechanically moved from vertical to horizontal, and actually measure the difference, and see what impedance changes you would see.

Jay in the Mojave

What do you want ..... I want Rock & Roll

Agreed, I made the same statement
in an earlier post to Dwight. Mistake made,
apology given, now lets all move on.

Here's a different, even more fundamental SSB question, from a relative newbie. I know that some transmissions are in LSB or USB only, such as ham operators. But what about using SSB to tune "regular" programs. I find that on my DX398, sometimes I can use the USB to pull in a weak signal, especially by being able to tune at finer resolution. Is this something that's standard practice?

thanks,

No won't work because your missing critical components in the signal that cannot be recorded in audio. Therefore it's not possible to recombine through adding another audio frequency to recombine and recover the intellegence. It would be nice if it could be done but unfortunately not! It's not a stupid question and i'm sure many have pondered the same thing.

>thanks,

No such thing as a stupid question. In fact, it's a good one!

Anyway... Here's my incredibly stupid answer. <g>

I don't know how much the technique is used by others, but I use it on some SW rigs that have sloppier AM bandwidth skirts.

The bandwidth of SSB IF filters (typically 1.8 or 2.4 KHz) is much narrower than AM, which generally run 4-6 Khz. This sharper cutoff reduces or eliminates bleed from stations that are near the frequency of the one you're tuned to.

It works nicely on AM signals in crowded conditions, provided the receiver tunes in small enough steps to eliminate the hetrodyne whistle, and is stable enough listen without constantly fine-tuning.

Of course, listening to an AM signal using a narrow filter leaves a lot to be desired in the fidelity, but if it enables you to hear a station while a nearby station is bleeding over it, or bring it marginally above the noise it's worth it.

Buster I don't think anyone said "your" meter was illegal or any other meter for that matter. But if someone said a meter
"Brainbuster" <brain@buster.com> wrote in message:
>
> The "AKCs" can scream all they like about how UK CB only allows 4 Watts, and
> only on FM... but my meter is still LEGAL TO USE.

Buster they havent said any meter was illegal that would be you saying that, they questioned why a CBer would have the need for a 5kw, 10 kw and 25 kw slug for use on CB. When 4 watts wouldnt make the meter move with any of them.

>
> The fact that my meter COULD be used to measure power levels and modulation

> transmit anything other than legal signals.

Ok again no one has diputed this.

>
> No matter what power a meter COULD measure, it does NOT transmit, it does NOT
> boost the power, and so it CANNOT be used to break the law. Measuring power is NOT illegal.

Buster no one has said this at all, they questioned why a cber would need a meter that reads that high.

Your point has been made but not confirmed.

Reckless driving:
Although state laws vary, many states follow the Uniform Vehicle Code. It
defines reckless driving as "willful or wanton disregard for the safety of
persons or property."

In order to charge someone with reckless driving, the prosecutor must show
that a driver did not care about the harm resulting from his or her driving,
and that the driver should have realized such driving posed a hazard. When
another person is killed as the result of reckless driving, the offending
driver may be prosecuted for vehicular homicide, which is punishable by
imprisonment and a fine.

> You believe that. I know for a fact that repetitive reckless drivings
will
> enable you to lose the priviledge of driving a car.

So will multiple speeding tickets but this does not make them felony
offenses as you claim.

> You call that a drop in
> the bucket? Depending on where you live, that can cost you your family,

This is total Bullshit Posted by Troll Free, check the Uniform Vehicle Code
for clarification. A criminal misdemeanor is not a felony.

TRAFFIC VIOLATIONS
Driving rules and violations are governed by state, county, and local laws
and ordinances. Routine infractions typically result in small fines (e.g.,
up to $50) and rarely count as points against a driver's record. However,
serious moving violations can be considered criminal misdemeanors and may
result in suspension or revocation of a driver's license under the laws of
many states. Monetary fines for reckless driving and other penalties may be
imposed, such as attending driving school/rehabilitation, jail time, or a
combination, for serious offenders.

No Sorry Troll Free, You are wrong, you must first know the correct use of the word felony. Check the Uniform Vehicle Code, the only time a traffic law is a felony is vehicular manslaughter.

Crimes are classified as either felonies or misdemeanors. Felonies are serious crimes (e.g., murder, rape, arson, armed robbery, tax evasion, possession of illegal drugs with the intent to sell or distribute, and forgery and larceny involving property valued in excess of a certain amount) that are punishable by incarceration in jail. Misdemeanors are less serious crimes (e.g., simple assault, disorderly conduct, disturbing the peace, malicious mischief, and possession of a small amount of illegal drugs with the intent merely to use them) that are punishable by little jail time (e.g., less than one year), fines, or probation

> Toll_Free

Who are you referring to, Toll? And why do you keep comparing wreckless
driving to freebanding? Hell, I have been driving wrecklessly for many
years... Oh, you meant 'reckless' driving. Well, let's compare the
legal difference between 'reckless' and 'willful and malicious'. The
term 'reckless' necessarily implies that the offender was not intending
to harm anyone or anything, but is just an irresponsible putz that doesn't
have his head screwed on straight. Now 'willful and malicious' is the
phrase used to describe an act that was performed with full knowledge of
the damage it would cause. Since the FCC sends a notice of violation
before they serve a NAL, anyone caught freebanding cannot claim that they
were merely 'negligent' or 'reckless'.

Here's the cool part: The fine assessed by the FCC cannot be discharged
by any bankruptcy court because of the 'willful and malicious' nature
of the act (11 U.S.C. 523(a)(6)), and that's why those words are included
in the FCC's notice. That means: If you play, you're gonna pay! Think of
the average Joe Schmoe that doesn't think there are any FCC field agents
in his neck of the woods when he keys up on the freeband with his linear.
Does he have a family to support? Kids? House payments? Hospital bills?
I guess Mr. Schmoe isn't too smart if he has any of those responsibilities,
is he?

So if Mr. Schmoe receives a friendly notice that he shouldn't be doing
what he does on the radio, and he keeps doing it anyway, then he's not
acting 'reckless' or 'negligent', but 'willful and malicious', and THAT,
dear Toll, is why you can't go comparing this stuff.

>stable enough listen without constantly fine-tuning.

Very true, and a good reason to listen to "regular" stations in SSB mode.

There's another good reason:

The fading that's common on shortwave is not the same at all frequencies -
at any given time, some frequencies are fading more than others. Sometimes,
the difference in fading is extreme at frequencies that are very close to
each other. If the "carrier" frequency of a station fades more than its
"sidebands" - a very common occurence - reception will become very
distorted. It's like if you shout into the microphone of a CB radio, and
get distortion and "splatter" - indeed, it's exactly the same phenomonon,
except that it's happening in the atmosphere instead of the transmitter.

When you switch to SSB mode, the BFO circuit provides a "carrier" signal of
constant strength. It doesn't matter how much the carrier transmitted by
the station fades, the carrier provided locally by the BFO is constant.
This "selective fading" distortion won't be nearly as bad.

The process is known as "exalted carrier" reception. I use it quite a bit
when DXing standard AM broadcast stations with my ham gear.

Gold Bozo:
This unit is better than the ones that the companies made, because the ball is threaded & 271 glued on the top of it so it will NEVER come off! And just $5 more than the 102" with the STAINLESS STEEL spring (so it won't rust) which costs $25 just for the SS spring. So it is just $5 or less more than if you use to buy GOOD STUFF that don't rust, which you probably didn't. So any time you spend more than $12 for one, it looks like gold, since you never bought a good antenna, sunny! (cause yo couldn't afford one with that welfare check youse is gettin' !

In California, failure to stop (hit-and-run) with death or serious
injury [CVC s. 20001(b(2)] or driving under the influence of alcohol
or drugs causing bodily injury [CVC ss. 23153 and 23558] can be
charged as felonies.

It's the CALIFORNIA Vehicle Code, not the Uniform Vehicle Code,
that governs there.

Yup. I run an email server that houses about 300 different SMTP / POP3
servers.

I am NOT affiliated with any one of them. I simply run a box that houses
the services they need.

I am NOT affiliated with the www site for bigradios.com

I suggest you learn something about what it is you want
to slander people with before you attempt it Aaron. Your
treading a fine line.

I find this hard to believe. I know this isn't true, because when you first
came on the board, you INSISTED that you wanted to know who people
where to "snitch" on them to the FCC.

So, you see, this is a lie, Aaron. You too are a victim of the "human
element", arentcha?

You also say over and over that you break FCC
> rules and dont care who knows it.

Yup, I do, and nope, I don't.

I thought you'd be HAPPY to give
> your call out. My mistake.

Again, when it becomes law for me to give it out on UseNET, I will.

Until then, your mistaken about most things you spew.

Pretty much the antenna is unserviceable, the vandals were nice enouch to leave just a tad bit of coax on the other side of the magnet. I did manage to solder in new coax, but not willing to bet my finals on the job, it makes an excellent mobile scanner antenna once I cut the mast to the length of the local Police dept.. Just for the record...I've got a Wilson to run my CB. 73.

The crime at Sodom was attempted gang rape of male angels.
The conflation of rape with consensual sex is dishonest and
propagandistic.

Therefore, if you an _alleged_ heterosexual, call gay men "sodomites",
they are entitled to cal you "rapist."

For those of you that have a hard time understanding the fundamental nature of a law, here you go:

Article VI of the U.S. Constitution clearly states that any law that is made in accordance with the Constitution is the "supreme Law of the Land".

Article I Section 7 outlines the method by which laws are passed. Just like in "Schoolhouse Rock", it begins as a Bill, it must pass the House of Representatives and the Senate, and be signed by the the President.

The "Communications Act of 1934" was sponsored by Dill and Rayburn as a Senate Bill (S.3285), which was then passed by Congress, and later signed by President Roosevelt on June 19, 1934. This law was enACTed through the procedure required by the U.S. Constitution.

A "law", according to the first Webster's I pulled off the shelf, is defined as "1. all the rules of conduct established by the authority or custom of a nation, etc. 2. any one of such rules 3. obedience to such rules... 7. any rule expected to be observed..."

Part 95 'rules' are laws!

> FORCED SPECTRUM SHARING: BATTLE LOOMS OVER PART 15 ACCESS TO 425-435 MHZ
>
> The American Radio Relay League says that a battle is looming with the FCC
over
> the agency's proposes changes to its Part 15 rules governing unlicensed
> devices. Changes that would allow operation of advanced radio frequency
> identification devices between 425 and 435 MHz. And it could spell the
word
> trouble for ham radio as we hear from our South-East Bureau Chief, David
Black,
> KB4KCH.
>
> --
> The ARRL Letter explains the League's position. The FCC has decided to
grant a
> request made earlier this year by SAVI Technology Inc. SAVI wants to us
the
> spectrum for radio frequency package identification tags. To help make
that
> happen, the FCC is issuing a Notice of Proposed Rule Making.
>
> In comments on the VHF Reflector, Russ Pillsbury, K2TXB, discusses SAVI.
He

> describes it as a big, multi-national company with significant worldwide
> funding. Pillsbury also says SAVI has large United States defense
department
> contracts as well.
>
> SAVI Technology sells radiolocation and wireless inventory control
products.
> SAVI says it needs the rules change to meet customer demand for increased
radio
> frequency identification system capabilities. And the FCC says it agrees
with
> SAVI. The Commission says changes
> to its Part 15 rules would allow more advanced radio frequency ID systems
on
> the 433 MHz band and would serve the public interest.
>
> The Commission proposes creating a new section to Part 15. It would allow
> operating radio frequency ID systems between 425 and 435 MHz.
Transmissions
> could be up to two minutes at a time. Maximum field strengths would be at
the
> level now permitted only for extremely short-duration, intermittent
control
> signals. And that's what ham radio operators don't like. They see that
as a
> high potential for interference to Amateur Radio operations nationwide.
And
> it's why the ARRL fiercely opposes the rules change.
>
> The League takes a strong stand. The ARRL says the FCC has set the stage
for
> another battle between amateur and commercial interests. League Executive
Vice
> President Dave Sumner, K1ZZ, accuses the FCC of not having thought this
one
> through. Sumner normally expresses ARRL Board policy. He says the Part
15
> radio frequency identification proposal is: "contrary to the whole
philosophy
> of the Part 15 rules."
>
> Sumner says the radio identification devices SAVI proposes belong on other
> frequencies--specifically, those authorized for use by devices regulated
by FCC
> Part 18 rules. Those regulations cover Industrial, Scientific and
Medical
> devices. The FCC counters, saying the proposed rules change dealing with
the
> ID systems is to harmonize its own rules with those in other parts of the
> world.

>
> But Sumner fires back. He says 433.9 MHz is allocated for Industrial,
> Scientific and Medical devices only in ten European countries but not in
the
> rest of the world. And it is not permitted in North and South America
which
> make up I-T-U Region 2.
>
> From the South East Bureau in Birmingham Alabama, I'm David Black,
KB4KCH, for
> the Amateur Radio Newsline.
>
> --
>
> Another portion of the proposed rules change involves the Industrial,
> Scientific and Medical frequency allocation at 13.56 MHz. Dave Sumner
says at
> first glance that proposal might permit increased emissions in the bottom
10
> kHz of the 20-meter amateur band. Sumner adds that the ARRL will take a
closer
> look at this section of the overall proposal before assessing its
interference
> potential. The entire Notice of Proposed Rule Making and Order is
contained in
> ET Docket 01-278 is available on the FCC website at www.fcc.gov and the
ARRL
> Website at www.arrl.org. (ARRL, K2TXB, VHF Reflector)

Look for Warren, Mi, it is surrounded by Warren at about 12 mile road (for a southern boy, I knows my geography-well some) notice I used the word about but It is easy to find, Warren starts at 8 mile road on the North
side of Detroit.

SDJ:

Just so you know it's not all HAMs that do this.. Just because someone's a HAM doesn't make them an AKC supporter, nor does it automatically make them an ass...

As for me, I was an ass to begin with, which I admit freely, but that's neither here nor there.. I've also progressed beyond the No-Code Tech... and 2nd Tues in November, I'll be taking yet another test and will most likely be an Extra class... That doesn't mean I still don't enjoy CB.

Just my two cents.

-SSB

Who decides what rules are "made to be broken"? The individual? The majority? Which majority? Certainly the majority in rrcb believe FCC laws are meant to be broken. But ask the same question to a ham newsgroup and you'll get the opposite reaction. Or try putting the question to a neutral group, say people on the street. Ask them if they believe CB radio operators should obey FCC laws or not. I doubt you could find a majority to agree with your point of view. So you are trying to convince us that since your small minority feels that "the law is meant to be broken" there should be no further discussion on the matter.

I disagree.

Yes Dave, Please believe a troll like him.
He's nothing but a troll, I could care less, that's why
I killfiled him a month ago. Now he will go about changing
his screen nic. I hope he does, I'm surprised his supposed
inside snitch hasn't told him about the discussions I've had
with the @Home abuse team

"Updated September 26, 2001

You may not reference the @Home network (e.g. by including "Organization:
@Home" in the header or by listing an IP address that belongs to the @Home
network) in any unsolicited email even if that email is not sent through the
@Home network.

Newsgroups

Messages posted to newsgroups must comply with the written charters or FAQs
for those newsgroups. Advertisements, solicitations, or other commercial
messages should be posted only in those newsgroups whose charters or FAQs
explicitly permit them. You are responsible for determining the policies of
a given newsgroup before posting to it.

Posting or cross-posting the same or substantially similar messages to more
than eight newsgroups is prohibited. Our news software will automatically
cancel any messages posted to nine or more newsgroups.

Binary files may not be posted to newsgroups not specifically named for that
purpose. Users posting binary files to groups with policies concerning the
permissible daily volume of posted files are required to observe those
limitations.

Forging, altering or removing header information is prohibited. This
includes attempting to circumvent filters for posting to a newsgroup.

the @Home network reserves the right to discontinue access to any Usenet
newsgroup at any time for any reason."

Simple, even he can understand that, so I do encourage him
to remain with one screen nic for at least some length of time, that way I
couldn't prove that he were trying to by pass
killfiles.

Landshark

PS he proved I didn't make those post, isn't that right

I downloaded the Palm RX-320 software a couple of weeks ago. Now I can
play with the radio without the computer being attached. It's really
nice to use just before snoozing off. The only drawback I can see is
that it's possible to fall asleep and get poked by the Palm stylus...

I *think* that is called "exalted carrier reception" but I haven't heard that term in at least 25 years. If you can zero-beat the carrier so that you get no tone, you can improve the quality of reception.

As to the first question about recording SSB then playing it back, you might get one of those voice inversion decoders from a place like Ramsey Electronics and see if that would work. Probably not, but you might be able to clear it up just a little bit.

>
> Thomas

Well, here's goes a hare-brained theory from someone who knows little
about SSB:

Using a special computer program, increase the frequency of the audio by
10KHz. Then, overlay a 10KHz audio signal onto it. This is the tricky
part, as you will probably need to adjust the phase and exact frequency
of the injected 10KHz signal to get it to create intelligable audio. Then
you will have to decrease the resulting audio by 10KHz in order to make
it audible again.

I have no idea if this will really work, but it might. I used 10KHz
because that is well beyong the audio-range of an AM signal and most
computers can only manipulate files with a frequency range of up to
20KHz. And finding a program that can do this is a different story
altogether.

You are bidding on a beautiful Browning Golden Eagle Mark IV base station. What you see is what you get, all is in good working condition. This is a clean rig, no chop shop inside. Non-smoking environment. The audio on this thing is like a Hi Fi am broadcast station. The red pushbuttons on the microphone are not my doing. When depressed they make strange sounds over the air. I purchased the microphone separately. Equipment comes with a copy of the instruction manual. This thing has been under raps for several years and checks out fine. Own a piece of Americas CB history, the Eagle says it all.

> Cheers, Alan

You are right. We had 20 channels on 934 Mhz. There were a few commercial radios available, Reftec and Cybernet being amongst the more popular makes. I seem to remember a dual band 27/934 Mhz was available too. Unfortunately, this band is no longer in use as that part of the spectrum was taken over by mobile phones.
You can still find these radios relatively cheap on Yahoo/Ebay auctions. I think a lot of people buy them for nostalgic reasons, although I believe it might be possible to convert them for amateur use 23cm??
Cheers
Bob UK

I rarely get into those discussions unless they make their way over to the ham radio newsgroups. And even then I ignore most of them or respond to specifics by a particular person (like my recent exchange with Toll). When that happens, I do tend to monitor the CB newsgroup to watch for responses not cross posted back to the ham radio newsgroup (like yours). Beyond that, I tend to ignore this newsgroup entirely (no slant, just not my interest at the moment).

Body handling: HTML body converted to readable text

Without the carrier being re-injected in the receiver the rectified
output from the detector contains only the amplitude information.
The vital phase and frequency information is lost and gone forever.
There is no way of re-constituting the original signal.

But it's a very good question.

So far, most of the hams doing the "shredding" can't figure out that I
was talking about
mobile to mobile shootouts, and keep telling me about locations, etc.
That's because you can't figure out that radio isn't about "shootouts".
"Actually, it has more to do with your inability to make radio conform
to what you think it should be. Lack of control has always been your
problem here."

And paranoia is yours.

"And it pays very well, thank you very much."

Did you beat your puppies today?

"How can I? You don't hold still long enough and are constantly covered
in fecal matter. The cleansings from me that you have become accustomed
to and look forward to shall be ever present. I will always be around to
clean the path you muddy with your presence.
Did you put up that base antenna yet? Get rid of that Japanese car so
you can install a mobile that can actually be heard? Dogie taught you
how to howl for me, now you just need kicked a few times a day to remind
you of your pecking order. Stay with the beta pack."

>
> Give it a break man.

Back in 1943, several large broadcasters (NBC, CBS, et al,) decided
to whine about FCC and it's regulations. Here's what the U.S. Supreme
Court had to say to them:

"The plight into which radio fell prior to 1927 was attributable to
certain basic facts about radio as a means of communication - its
facilities are limited; they are not available to all who may wish to
use them; the radio spectrum simply is not large enough to accomodate
everybody. There is a fixed natural limitation upon the number of
stations that can operate without interfering with one another.
Regulation of radio was therefore as vital to its development as
traffic control was to the development of the automobile. In enacting
the Radio Act of 1927, the first comprehensive scheme of control over
radio communication, Congress acted upon the knowledge that if the
possibilities of radio were not to be wasted, regulation was
essential .... The facilities of radio are limited and therefore
precious; they cannot be left to wasteful use without detriment to
the public interest."

These laws were NOT made to be broken.

I had a license there about 20 years ago, but the laws may have changed
since then. Do you have a link?

"We're all still waiting on the link that backs your incorrect
ascertation of all those cbers interfering with emergency ops."

You asked for an example and you got one --

"No, you never posted one example of a freebander interfering with
emergency ops. Besides, you have neither the talent or know how to
impress the power of belief with your propaganda, but it's great fun
watching you attempt and fail at it for over a year, now."

I didn't even have to go looking for it. Now you want a link? Sure,
maybe later I'll post a link to that message, and a couple others I
found.

"And we're all still waiting for a single example where a simple
barefoot Dxer was fined thousands of dollars."

Who is "we"?

"The majority of the ng that consider you trifling."

And where did I say anything about "barefoot"?
I think you inserted that yourself, twist.

"I always maintained barefoot operations and worldwide freebanding and
you and your girl still accuse me of interfering based on your warped
and flawed interpretations and deducibility comprehension inability of
what you read. Appears "nad was thinking of you recently, she made the
comment that you spend your life in google archives. Carry on, son,
carry on."

But ya know what? I think I can find that link for ya. Tune in tomorrow.

"Yea, I been telling you that since you arrived here with such a
boisterous attitude and began shooting off about that of which you
actually know very little. Now, about that barefoot freebander
interfering with emergency ops..."

Oh, now it's not only a barefoot freebander, but also interfering with emergency ops! What's next? Does he have to be a blind, diabetic Italian?

"Actually, it isn't, and this is what pains you and predisposes you to the Little Caesar syndrome continually displayed by yourself."

Little Caesar is a pizza place,

"It's also a state of mind evidenced by your delusional behavior."

I think.

"No, you never think, which is what makes you such a character to have fun with."

Have you been skipping your visits to your imaginary shrink again?

"Only the imaginary visits."

"Nad's legacy to you:

 Yup, I just got me another bite on my trolling line!

Twistedhed wrote:
Dwight Stewart wrote...
(snip)

"Please make note of the words,
"Willfully" and "Maliciously." They
were not thrown in there because
they needed a couple of adverbs...it
is extremely difficult to prove a
willful, malicious act by merely
talking dx."

Very true, Twisted. But remember these provisions of the US Code do not kick in until after all efforts under FCC regulations have been exhausted first. In other words, before a person would be charged under this, the FCC would have already sent a Notice of Apparent Liability (describing the violation), fined the person under the forfeiture clause, and so forth. After that process, it would be pretty hard for a person to convince a jury that a continued violation was not willful or malicious.

"Oh, without doubt, without doubt. And I support the current follow-up
procedure. Only the problematic ops are targeted."

The radio frequencies are a means
of communication controlled by the
United States. We, as individuals,
are simply licensed to use those
radio frequencies by a government
agency. The part about "willfully
or maliciously interferes" in any
way with the use would cover
freebanding

"I disagree. Care to cite a reference
or example other than your own
interpretation?"

I cannot. I'm not making a statement of legal fact (that is the role of the courts). It is simply my own interpretation of that provision.

"Again, you demonstrate a very valid point. I feel many are split on
this division. I interpret that particular element of the law to target
only the obvious jammers and intentional interfering ops. I thinkthe

feds know they would e hard pressed to prove that a mere freebander was intentionally and maliciously causing a problem."

However, since the provision covers "line" as a means of communications, it is also clear that radio, which has replaced "line" in many incidents, is also a means of communications (besides, the provision specifically mentions "radio" repeatedly). Since the provision also mentions "interferes in any way with the working or use of any such line, or system..," it is not hard to make the jump that a person operating on a radio frequency he is not licensed to use is interfering with the "use" of that frequency by the authorized user. If that is true, then it seems obvious this provision could apply to that situation.

"Well, I still don't see the "proof" as obvious as you do, but I certainly understad your merit point."

"Again, you would have to prove,
beyond a reasonable doubt, the user
was not only aware of the frequecy
being owned/operated by another party,
but that the operator was intentionally
and willfully attempting to impede,
or actually impeding the transmission
with prejudice. Don't take my word
for it, check it out yourself."

I disagree. You don't have to prove the person was aware the frequency was used by another party. All you have to prove is that the person was aware the frequency is not there for him to use - that he was aware of the violation.

"Uh-huh. Maybe I agree here, but I see too many variables come into play on this for it to be that simple."

The procedures under FCC regulations (Notice of Notice of Apparent Liability (describing the violation), forfeiture fines, etc) would clearly establish that the person was aware of the violation.

"Maybe it would establish that train of thought, but I don't think it sufficient for "beyond reasonable doubt."

"Why Dwight, you truly amaze me
sometimes. You may try educating
a few laming around here lamenting
the state of cb. They not only have
us convicted of felonies for our
speech content, but engage us with
exotic, lurid tales of the freeband/
amplifier torture prison, culled
from the resentment that resides
deep in their imaginative and
fertile psyche."

Well, that is certainly not my intent. I strongly believe a person should be free to talk about whatever he or she so chooses. My message was in response to a specific comment about the law. I responded solely to that specific comment.

"Yea, I hear ya' Dwight. And the more you post in this manner, the more you will educate those concerned with the hammies' view. Those that appear to offensively scream the loudest concerning cb transgressions with no substance really don't care at all about the state of ham radio, it's just a catalyst for their own trolling agenda."

probably because you dont work too many UK stations on the 2 meter
repeaters
    Good grief, Dave. It was a mistake. It happens. It was late.
I was in a rush to finish all the messages I was trying to respond to
that night. I saw an unfamiliar callsign and, without thinking, quickly
checked it out. In my rush, I didn't notice the UK in his address, nor
did the callsign register in my mind as a UK callsign (mainly because I
was focused on the US because of the town mentioned in the message).

Geez, twistie, you sure became civilized all of a sudden! Using polite comments, almost sucking up to Dwight -- a real change from your posts from the past year or so. And you aren't even using any aliases this time. BTW, what ever happened to 1mangang and N7VCF@cotse.com? You aren't N7VCF, are you? Now why would you use his callsign, hmm....

LOL, If you have me blocked why are you answering me, havent you been silent because your building your case? LOL your still crying to @home trying to silence me thats a shame. But as you see they have no limits on how many account name that you can have. and this NG has no filters it is up to each individual to do so, but keep trying it gives you a reason to live. P.S. I don't change account names to by pass filters that is your assumption, and not a good one at that, I do it because it is my God given Right as a paying customer of @home. My friend will notify me when there is something of substance otherwise keep crying I knew you had a feminine side, I could tell by the way you sounded on the CB Radio.

well i think you will find that in time you will forget cb while you
are navigating around the airwaves , all over the world and holding
intelligent conversations with people from all over the world.....and
on top of that no interference, no heterodyne, no threats and no
cussing and above all else no illegal amps running at tip top power
levels. and all of this while you are being thrifty, brave, clean, and
reverant too..........is that not correct?????????

That's a badass system. It's really pretty cool when it gets use and someone from another country calls up a repeater in your area. I've talked to several foreign stations through the IRLP including one in the UK and another in the Lesser Antilles.

Why law abiding CBers need killfiles....

1. They cannot stand to read utter rubbish.

2. Reading Anti-keyclown posts interferes with everyones blood pressure

3. Anti-keyclown posts are way below their intelligence levels.

4. Not willing to read unfounded accusations.

5. Got bored with reading "AKC" posts.

6. Time is far to precious to waste reading the "AKC" posts.

7. Need extra time to get more important things done.

8. "AKC" members moms will probably spank their bottoms anyway.

9. Not bothered about reading messages from people who are not smart enough to use a "killfile".

10. Not interested in reading the sexual inuendos of people who are confused about their own sexuality.

11. Have far more important uses for their download time and disk space.

12. They realise that watching paint dry is more exciting than reading "AKC" messages.

> future. Are they in use, or were they?
> Cheers, Alan

Hi Alan.

They are now the past...
The 934 MHz specification was withdrawn in December 1988.

The RA then allocated the frequencies for mobile phone use as well as CB.
CBers were told to "block their ears" when telephones were using a
frequency.... lol.

On 1st January 1999, the RA made 934 MHz sets illegal to use. As the
frequencies are re-allocated, using the old sets is extremely risky.
http://www.radio.gov.uk/publication/ra_info/ra246/ra246.htm

We have now been allowed the 40 EU frequencies (26.965 - 27.405 MHz), and
even allowed dual band sets with both UK and EU frequencies.
There is now talk of allowing SSB and even packet on CB.
http://www.radio.gov.uk/topics/cb/documents/cb-forum.htm

I don't know about CompuServe, but if you use Outlook Express, then the
ability to block senders or threads, or automatically delete messages with
certain words in the "from" or "Subject" fields is built in.

>
> Mr. Brain My Good fellow My post wasn't directed at you, just that there
> seems to be 2 sets of rules regarding posts.

Hi.

Sparkys comment was aimed directly at me, and your reply seemed to agree.
But there are two standards on both sides...

If it is "on-topic" for an AKC to refer to amps, then it is for anyone
else. People will want ALL the facts if they are to make an informed choice
about use of certain equipment.

The AKCs say that the rules MUST be obeyed, yet they often break ISP rules,
and laws regarding falsely accusing people. Even the police have to work to
the rules, even if this makes their job harder.

If it is not right for the "keyclowns" to use abuse to "silence" the AKCs,
then it is not right for the AKCs to use the same tactics.

My killfile keeps getting bigger. Names are added purely because of the abuse
or spam factors, regardless of what CB tackle they use.
Some of the names are from sales spam, but the majority are for abusive
language or flooding. Out of the blocked newsgroup abusers, the majority
claim to be doing it out of respect for the law, and for the public good.

I believe that the "AKCs", and all other newsgroup users also have the right
to ignore or block senders, messages, or threads they do not like.

Regards,

Brainbuster.

Some people fill the band with "trash", but that don't make the person
"trash".
There are music players, keyers, "bucket mouths", and people who are just
plain inconsiderate... But there are many GREAT people on the CB. There are
CBers who would give you the shirt off their back, I have met such people.

There are people who say how they posted the same question to Amateur and CB
newsgroups.... and ONLY THE CBers were helpful. If being helpful,
considerate, and caring about other people makes you "trash", then I will
PROUDLY admit to being that.

Regards,

Brainbuster.

Sparky piddled with:
Geez, twistie, you sure became civilized all of a sudden!

"The problem is with your inability to debate a subject, Sparky, not mine. You get back what you put in..it's the golden rule, something you apparently were never taught as a child. Treat those as you wish to be treated. Dogie came in here playing stupid and you were waving an N8 flag cheering him on. As a result, the respect each of you receive here is well deserved."

Using polite comments, almost sucking up to Dwight --

"Now now, is there not enough of us that you are envious of without adding Dwight to your list? Dwight happens to share his knowledge in a congenial manner and unlike you, has the ability to usually discuss a subject without getting stupid. I have had my squabbles with Dwight in the past, difference is, he doesn't let his personal feelings cloud his judgement like you do with each post. He usually sticks to the facts, and when it's his opinion, he states so without reservation. He also can admit if he is wrong and move on from it, not dwell on it and attack the person who pointed it out."

a real change from your posts from the past year or so. And you aren't even using any aliases this time.

"Of course not. And my email has never changed in over two years. Not once."

BTW, what ever happened to 1mangang and N7VCF@cotse.com?

"Well, which is it? lmangang or 1mangang? Or am I both? You never answered that."

You aren't N7VCF, are you? Now why would you use his callsign, hmm....

"Look at his nic then ask "Nad that question.
The question is, why would you care?
I'm not the gent you tried to come off as, although I have had contact with him recently."

W5NET, thank you for posting these links, they are very informative.
I have but one question. It seems that your still are not charged
with a felony for violating FCC rules part 95 for the cb.
My fault for not putting the question that way, but all the links
you put up show clear that when violating title 47 18 that is
punishable, but no where did I find any evidence that it is the
same penalty for violating part 95.
It also seems that the government only does this after an FCC
commision forwards a formal complaint to the US district attorny.
So in my eyes that still means that violating part 95 is not
a law and is not a felony, because you never appear before a
judge or jury. Don't get me wrong, it still is a fine and it
is messing with the federal government, but is not breaking any
law when violating part 95 of the FCC rules.
Thank you very much for a very good discussion.

3543. It's A Two Way Street

Newsgroup: rec.radio.cb
Date: 2001-10-29 22:17:22 UTC
From: voobner@yahoo.com
Message-ID: <fbc7a2.0110291417.2a87ba43@posting.google.com>
Source record: 102550

Two very relevant posts from another forum reprinted below. The first
is pretty self explanatory, but the second is really interesting
because it points out the current lack of a license class that would
provide real entry level ham learning experience. -Aaron-

> i swear, instead of putting people down, why not try and share
> something, like amateur radio with them?

Its a 2-way street. We held a novice class once and had a pretty good
initial turnout. There was no putting anybody down but when the
prequisites were being explained, one well known CBer (and his wife)
stood up and uttered some vulgarities and walked out.

The class went on to graduate about a dozen new Novices (in a very
small
town) from ages 10 to 71 many (if not most) of which were former
CBers.
In fact one of our instructors was the king of local CB DX-ers before
getting his ham license only about a year earlier and probably
responsible for luring many to the class.

I'm sure the guy that stormed out wouldn't have been welcome anyway
with
such an attitude.

Bill
WX4A

The theory behind the Novice test, was that it would allow
time for the newbie to promote the kind of operations
that would develope good operating habits and to develop
skills in the radio arts.

The power restriction, and low-speed code test and promotion
of CW operation in narrow sub-bands, all contributed to
developing care in observing frequency allocations and brevity
in communications, and weak signal skills, not to mention
requiring sufficient patience and attention span to pass the
simple 5 wpm code test.

The Tech license fails to promote weak signal HF CW ops
and thus promote skill building. At it's inception, the Tech
license allowed experimentation with frequencies that were
underutilized and it was thought that the skills required

would be comparable and indeed would require much more technical expertise than the Novice ticket. However, with the advent of the over-the-counter radio resembling the channelized CB rig, the whole idea of incentive licensing falls flat in promoting the radio art and good operating skills.

Possibly with the realization that the CB operations would be the real entry level training ground, that it would be left up to operator to unlearn bad habits and "find" good operating habits without necessarily learning from those who have gone before. Given this fact, for what reason do we have a licensing stucture at all? Although good operating habits are not officially discouraged, one can always unlearn bad habits and learn good ones but who would hear or recognize them as the lids capture everyone's attention and discourage others?

In fact there is no official promotion of good operating habits other than the requirement of a quick test that amounts to a list of rules to be broken.

All correct, except the part about me forgetting CB.. I still have one in the car, and I still use it daily.. The antenna for the base station was blown down last week in a heavy storm that blew through here, and I haven't gotten it put back in place yet. I look forward to having the time to do so this weekend so that I might get back on the air on that band... No, I'm not going to tune the G5RV and use the 706 for CB... that would be "wrong".

For sale:

Siltronix Model 90 VFO
Type 6, with output at 23 MHz
Super-clean inside
Front panel and knobs excellent
Freq counter and HF receiver say it's working
No modifications that I can spot
Sorry, no manual (although I see them on eBay regularly)
Sorry, I don't know if it will work with YOUR radio

Price US$50.00 plus shipping
Will trade for tube-type ham or CB gear

73,
Dean, K5DH

Well and good, but what happens when you are watching the World Series (or Superbowl) and someone decides that their need for that frequency is more important than yours? Just a question. I know the frequencies near 27 MHz are not packed the way the ones down near 7 MHz are, the question is still relevant. It boils down to the fact that all radio frequencies are, by their nature, a shared resource and there is a need for reasonable control just as there is a need to control traffic on the roadways.

Jesus.

Someone actually gets it :)

The states can and do enact any laws that are MORE stringent than the laws
and guidelines provided by the federal government.

They may NOT enact laws that are less stringent, except as provided by law.

Otherwise... Utter chaos would result. However, this is the primary thing
that got the speed limit raised from 55 to
where it is now.....: The State of Nevada raised their speed limit to
infinitum during a brief period, and it actually
went to Congress about what to do about it. I was in the state at that
time, however, unable to drive (still in High School).

Please provide the Uniform Vehicle Code for the State of California.

The following was taken from http://www.dmv.ca.gov/pubs/vctop/lov/lovd11.htm

F 21464(c) Signs, signals or markers, damaging, removing or attaching
material to, resulting in injury or death.

M/F 21651(c) Driving the wrong way on a divided highway which causes
injury or death.

F 23110(b) Throwing missile with intent to do serious bodily harm.

F 23153(a) Under influence of alcohol, drug, or combination, causing
injury or death to another on highway or other than a highway.
F 23153(b) Driving with a BAC of .08% or more causing injury or death
to another.
F 23153(d) Commercial Driver, driving with a BAC of .04% or more
causing injury or death to another. (Effective 1/1/92).
M/F 23175(a) Driving under the influence, fourth or subsequent
offense within seven years.
M/F 23175.5 (a) Driving under the influence, within 10 years of prior
felony DUI.

>

> (e.g., less than one year), fines, or probation

Blah blah blah.

I know what the difference between a felony and a misdemeanor is.

Throwing out jargon is a way of pulling people off the topic.

Depends a lot on which part of the 953 facets of radio turns him on and his
equipment budget.

If he gets into digital, EME, top band, CW, etc. probably not. If he gets
into DXing or contesting, the sunspots will make that decision for him. If
he likes to ragchew with some locals and interesting characters, who the
hell knows.

Point: you cannot stuff Amateurs into bottles any more than you can CBers,
and to a large extent they are the same people. Why leave old friends
behind -- that is too much like giving in the enemy.

The FCC revises Title 47 each and every year. Part 95 has undergone several revisions since it's inception, and is currently and actively enforced. There is nothing outdated or obsolete about it, except maybe for the allowance of AM modulation.

To say that 'laws are broken everyday' is no excuse to break them. If that were the case, every crime in America would be legal.

Ignoring logic does not justify illegal behavior.

mr sideband what i am saying to you is this....as soon as you find out
how wonderful and exciting ham radio is you will never come back to
cb....man for you cb is a dead issue now that you are a general......
i mean isn't ham radio exciting and a really cool place to hang
out????? why would you want to mess with cb and all the hash and
trash, when you can get out the two meter rig and get on the repeater
and talk all over the place , and just as clear as a bell...you can
get on the other freqs and operate that keypad while in the car and
chit chat all over the world....why o why do you linger here ?????
inquiring minds want to know???? hello come in.....i know , you
like it here don't you....??????

That is the same question lingering over my town. Birds of a feather,
flock together. One becomes a ham, another follows. Soon they wonder
why their CB channel is quiet.

Only folks I hear are single-banders...except on net night.

I JUST READ THAT A TERRORIST "CELL" WAS BUSTED IN OUR NATIONS CAPITOL!!!
THERE WERE 5 MEMBERS OF THIS GROUP.
THE CAPITOL POLICE ARRESTED 4 OF THE GROUP,AND 1 REMAINS AT LARGE. THE
IDENTITIES OF THE 4 CAPTURED ARE AS FOLLOWS.1) BIN-SLEEPIN 2)BIN-EATIN
3)BIN-SMOKIN 4)BIN-DRINKIN. THE FIFTH MEMBER OF THE GROUP "BIN-WORKIN" IS
STILL AT LARGE AS THERE IS NO ONE WHO MATCHES THE "BIN-WORKIN"
DESCRIPTION....IN THE D.C. AREA.

HEEE HEEE.....ELPASOGUNSLINGER.....WERE BACK OFF THE KEY....BEEEEEP!!

SD:

Because I enjoy CB, and I still have friends on CB. Yes, I have fun with PSK-31, SSTV, voice, and even CW on the HAM bands I'm now licensed to talk on, but CB is a whole different animal. Make no mistake, I've already found out how much fun the HAM bands are, but I still like to chat on the CB with my friends, too...

If you were given license to run very very fast on a running course set aside for you, but your friends and family were still on the older, slower course, wouldn't you slow down on the slow course to talk with them from time to time?

Come now, Inquiring minds want to know.

What pain? Any of the following can be used to make a single-tube transmitter which can be tossed together in an hour or two: 117N7GT, 6AV6, 1614, 3A5, 50L5, 6CX8, 6AG7, 6GW8, 6AQ5.

Make it a 2-tube xmtr and the number of circuits available becomes almost endless.

There is a very active email list devoted to home-building with tubes: "Glowbugs."

WELL....JUST BECAUSE ITS A LAW 'ON THE BOOKS" DOESNT MEAN IT SHOULD ALWAYS
BE OBEYED.I REMEMBER NOT TO LONG AGO,"LAWS" THAT WERE ON THE BOOKS THAT
DIDNT ALLOW PEOPLE OF COLOR TO EAT IN CERTAIN RESTAURANTS,DRINK FROM PUBLIC
FOUNTAINS,USE PUBLIC RESTROOMS ETC.ETC.THESE WERE THE "LAW OF THE LAND"
THINK WE SHOULD HAVE "BLINDLY" OBEYED THOSE.?????
WHAT ABOUT LAWS THAT ARE STILL ON THE BOOKS THAT TRY TO TELL YOU AND YOUR
LOVED ONE WHAT YOU CAN AND CANT DO...IN YOUR OWN BED-ROOM????YOU GONNA LET
SOME GEEKY ASS-HOLE WITH A HANG-UP TELL YOU WHAT TO DO??? DONT THINK
SO.....AND WHAT ABOUT THE CONCEPT OF 'GENERAL ACCEPTANCE" IF A LAW BECOMES
NO LONGER OBEYED(AS IT IS REGARDING FREE-BANDING) MABEY ITS BECOME AN
ANTIQUATED LAW NEEDING RE-VISION OR RE-MOVAL. HEY....ITS JUST A THOUGHT.:)

> RFA

1.80 Forfeiture proceedings.

(a) Persons against whom and violations for which a forfeiture may be assessed. A forfeiture penalty may be assessed against any person found to have:
(1) Willfully or repeatedly failed to comply substantially with the terms and conditions of any license, permit, certificate, or other instrument of authorization issued by the Commission;
(2) Willfully or repeatedly failed to comply with any of the provisions of the Communications Act of 1934, as amended; or of any rule, regulation or order issued by the Commission under that Act or under any treaty, convention, or other agreement to which the United States is a party and which is binding on the United States;...

This is easier to understand when one realizes that radio communication is not a guaranteed Constitutional right. The cited law provides 'due process' as required. Failure to pay these forfeitures results in a civil procedure, which is also 'due process' under the law. Illegal operation can also fall under other criminal and/or civil laws, such as, but not limited to, malicious mischief, nuisance, evasion, fraud, harassment and extortion.

Once again, the excuse has no merit.

Please send me any and all communication from this jerk. I have the FBI involved along with a reluctant NY detective. The NY detective says he is swamped with child 'porn' cases. I want this Ray Cohen who 'stole' another hams' call to go to prison. He has been doing this for over a year. Your cooperation is appreciated. Do you have a serial number of your radio? I have a lot of info on this person knowing his real name and home address. Also, I believe the UPS Carrier is involved. Keep all of this quiet so he (Ray Cohen) does not have an advantage. The more paperwork, the more urgent the case! Jim

Randal I have figured out a way to take damaged 2879's and fit them into the head of my driver which adds about 50 yards to my drive, not to mention that they all end up in the fairway. Oh yeah, by the way, don't forget that the golf carts have a large battery bank on them and I am working on a CB system that will amaze everyone in DX land, I am going to call it the fairway 1000, it will be class AB and will also have different power levels, I will call them Birdie (high) par (just cruisin) bogie (I heard that drivah) and double bogie (10-9 say it again drivah someone had the button down.
10-fore.....I'll see ya.

If you were to diagram the sentiments of this group you'd see there
are fanatics on both sides. So where are you, Dick?

Hi amp man,

FCC rule 2.815(b): After APR 27, 1978, no person shall manufacture, sell or
lease, offer for sale or lease (including advertising for sale or lease), or
import, ship, or distribute for the purpose of selling or leasing or offering
for sale or lease, any external radio frequency amplifier or amplifier kit
capable of operation on any frequency or frequencies between 24 and 35 MHz.

Hi Dean,

How come this VFO is advertised in rec.radio.cb? It does not seem
appropriate to the type of equipment and frequencies that CBers are
authorized to use.

Federal Communications Commission (FCC)

Part 95 - Subpart D - Rules for CB Service
Citizens Band (CB) Radio Service

General Provisions-

[RULE 1] Description
[RULE 2] Usage of Rules
[RULE 3] Who is Eligible
[RULE 4] Licenses
[RULE 5] Areas Of Legal Operation
[RULE 6] Special Restrictions
[RULE 7] Operating Channels/Frequencies
[RULE 8] Antenna Height
[RULE 9] Equipment
[RULE 10] Power Output
[RULE 11] Linear Amplifiers
[RULE 12] Permitted Communication
[RULE 13] Illegal Communication
[RULE 14] Paying for Actual Use
[RULE 15] Who Is Held Accountable
[RULE 16] Time Limit of Transmissions
[RULE 17] Identification Methods
[RULE 18] Emergency Usage and Assisting Travelers
[RULE 19] Remote Control Operations
[RULE 20] Telephone Patches and Telephony with CB
[RULE 21] Penalties
[RULE 22] Correspondence from FCC
[RULE 23] Notice of Interference
[RULE 24] Service to Transmitters and Antennas
[RULE 25] Modifications to Transmitters

[RULE 26] FCC Inspections
[RULE 27] Keeping Station Records
[RULE 28] Contacting the FCC

RULE 1 - Descriptions The Citizens Band Radio Service (CB) is a private, two-way, short-distance voice communications service for personal or business activities. The CB Radio Service may also be used for voice paging.
RULE 2 - Usage of Rules You must comply with these rules when you operate a station in the CB Service from:
{1} Within or over the territorial limits of places where radio services are regulated by the FCC.
{2} Aboard any vessel or aircraft registered in the United States or
{3} Aboard any unregistered vessel or aircraft owned or operated by a United States citizen or company.
Your CB must comply with Part 95/Subpart E [Technical Rules].
Where the rules use the word "you", "you" means a person operating a CB station. Where the rules use the word "person" the rules are concerned with an individual, a corporation, a partnership, an association, a joint stock company, a trust, a state, territorial or local government unit, or other legal entity. Where the rules use the term "CB station", that means a radio station transmitting in the CB Radio Service.
RULE 3 - Eligibility To Use CB You are authorized to operate a CB station unless:
{A} You are a foreign government, a representative of a foreign government, or a federal government agency.
or
{B} The FCC has issued a cease and desist order to you, and the order is still in effect.
RULE 4 - Licenses You do not need an individual license to operate a CB station. You are authorized by this rule to operate your CB station in accordance with the rules stated in this Subpart. (*also read Rule 17)
RULE 5 - Areas of Legal Operation You are authorized to operate your CB station from:
{A} Within or over any area of the world where radio services are regulated by the FCC. Those areas are:
[1] The 50 United States
[2] The District Of Columbia
[3] Commonwealth of Puerto Rico
[4] Navassa Island
[5] United States Virgin Islands, it's 50 islets and cays
[6] American Samoa
[7] Baker Island
[8] Commonwealth of Northern Mariana Islands
[9] Guam Island
[10] Howland Island
[11] Jarvis Islan
[12] Johnston Island

[13] Kingman Reef
[14] Midway Island
[15] Palmyra Island, and it's 50+ islets
[16] Wake Island
{B} Any area of the world, except, within the territorial limits of areas where radio services are regulated by -
[1] An agency of the United States other than the FCC, you are subject to it's rules.
[2] Any foreign government, you are subject to it's rules.
{C} An aircraft or ship, with the permission of the captain, within or over any area of the world where radio services are regulated by the FCC or upon or over international waters. You must operate your CB station according to any applicable treaty to which the United States is a party.
RULE 6 - Special Restrictions
{A} If your CB station is located on premises controlled by the Department of Defense you may be required to comply with additional regulations imposed by the commanding officer of the installation.
{B} If your CB station will be constructed on land of environmental or historical importance (such as a location significant in American history, architecture or culture), you may be required to provide information to comply with Part 1.1305 through 1.1319 of the FCC Rules.
RULE 7 - Operating Channels/Frequencies Your CB station may transmit only on the following channels / frequencies:

Channel	Frequency	Channel	Frequency
1	26.965	21	27.215
2	26.975	22	27.225
3	26.985	23	27.255
4	27.005	24	27.235
5	27.015	25	27.245
6	27.025	26	27.265
7	27.035	27	27.275
8	27.055	28	27.285
9*	27.065	29	27.295
10	27.075	30	27.305
11	27.085	31	27.315
12	27.105	32	27.325
13	27.115	33	27.335
14	27.125	34	27.345
15	27.135	35	27.355
16	27.155	36	27.365
17	27.165	37	27.375
18	27.175	38	27.385
19	27.185	39	27.395
20	27.205	40	27.405

{B} * Channel 9 may be used ONLY for emergency communications OR for traveler assistance.
{C} You must, at all times and on ALL channels, give priority to

emergency communication messages concerning the immediate safety of life or the immediate protection of property.
{D} You may use ANY channel for emergency communications or for traveler assistance.
{E} You must share each channel with other users.
{F} The FCC will not assign any channel for the private or exclusive use of any particular CB station or group of stations.
{G} The FCC will not assign any channel for the private or exclusive use of CB stations transmitting single sideband or AM.
RULE 8 - Antenna Height
{A} "Antenna" means the radiating system (for transmitting, receiving or both) and the structure holding it up (tower, pole or mast). It also means everything else attached to the radiating system and the structure.
{B} If your antenna is mounted on a hand-held portable unit, none of the following limitations apply;
{C} If your antenna is installed at a fixed location (whether receiving, transmitting or both) it must comply with EITHER one of the following:
[1] The highest point must not be more than 20 feet (6.10 meters) higher than the highest point of the building or tree on which it is mounted;
or
[2] The highest point must not be more than 60 feet (18.3 meters) above the ground.
{D} If your CB station is located near an airport, and if your antenna structure is more than 20 feet (6.10 meters) high, you may have to obey additional restrictions. The highest point of your antenna must not exceed 39.37 inches (1 meter) above the airport elevation for every 109.36 yards (100 meters, 1 hectometer) of distance from the nearest point of the nearest airport runway. Differences in ground elevation between your antenna and the airport runway may complicate this formula. If your CB station is near an airport, you may contact the nearest FCC field office for a worksheet to help you figure the maximum allowable height for your antenna.
WARNING: Installation and removal of CB station antennas near powerlines is dangerous. For your safety follow the installation directions included with your antenna.
RULE 9 - Equipment
{A} You must use an FCC type accepted CB transmitter at your CB station. You can identify an FCC type accepted transmitter by the 'type acceptance'label placed on it by the manufacturer. You may examine a list of type-accepted equipment at any FCC Field Office or at FCC Headquarters. Use of a transmitter which is not FCC type-accepted voids your authority to operate the station.
{B} You must not make, or have made, any internal modifications to a type-accepted CB transmitter. (*read Rule 25) Any internal modification to a type-accepted CB transmitter cancels the type-acceptance, and use of such a transmitter voids your authority to operate the station.

RULE 10 - Power Output
{A} Your CB station transmitter power output must not exceed the following values under any conditions:
AM [Amplitude Modulation] - 4 watts carrier power [CP]
SSB [Single Side-Band] - 12 watts peak envelope power [PEP]
{B} If you need more information about the power rule, see Part 95/ Subpart E.
{C} Use of a transmitter which has carrier [CP] or peak envelope power [PEP]in excess of that authorized voids your authority to operate the station.
RULE 11 - Linear Amplifiers
{A} You may not attach the following items (power amplifiers) to your type-accepted CB transmitter in any way:
[1] External radio frequency [RF] power amplifiers, also called linear amplifiers, or linears;
or
[2] Any other devices which, when used with a radio transmitter as a signal source, are capable of amplifying the signal.
{B} There are no exceptions to this rule and use of a power amplifier voids your authority to operate the station.
{C} The FCC will presume you have used a linear or other external [RF] power amplifier if-
[1] It is in your possession or on your premises; and
[2] There is OTHER EVIDENCE that you have operated your CB station with more power than allowed by CB Rule 10.
{D} Paragraph C above in this section does not apply if you hold a license in another radio service (HAM, etc.) which allows you to operate an external RF power amplifier.
RULE 12 - Permitted Communications {A} You may use your CB station to transmit two-way plain language communications. Two-way plain language communications are communications without codes or coded messages. Operating signals such as "ten codes" (10-4, etc.) are not considered codes or coded messages. You may transmit two-way plain language communications only to other CB stations, to units of your own CB station, or to authorized government stations on CB frequencies about-
[1] Your personal or business activities, or those of members of your immediate family living in your household;
[2] Emergencies;
[3] Traveler assistance;
[4] Civil Defense activities in connection with official tests or drills conducted by, or actual emergencies announced by, the Civil Defense Agency with authority over the area in which your station is located.
{B} You may use your CB station to transmit a TONE SIGNAL only when the signal is used to make contact, or to continue communications (Examples: tone operated squelch, selective calling circuits). If the signal is an audible tone, it must last no longer than 15 seconds at one time. If the signal is a subaudible tone, it may be transmitted continuously only as long as you are talking.
{C} You may use your CB station to transmit one-way communications

(messages not intended for two or more CB stations) only for emergency communications, traveler assistance, brief tests (radio checks) or voice paging.
RULE 13 - Illegal Communications {A} You must NOT use a CB station-
[1] in connection with activity which is against federal, state or local law;
[2] to transmit obscene, indecent or profane words, language or meaning;
[3] to interfere intentionally with the communications of another CB station;
[4] to transmit one-way communications, EXCEPT for emergency communications, traveler assistance, brief tests (radio checks) or voice paging;
[5] to advertise or solicit the sale of any goods or services;
[6] to transmit music, whistling, sound effects or any material to amuse or entertain;
[7] to transmit any sound effect solely to attract attention;
[8] to transmit the word "MAYDAY" or use any other international distress signal, EXCEPT when your station is located in a ship, aircraft or other vehicle which is threatened with GRAVE AND IMMINENT danger and you are requesting IMMEDIATE assistance.
[9] to communicate with, or ATTEMPT to communicate with, any CB station more than 155.3 miles (250 kilometers) away;
[10] to advertise a political candidate or political campaign (You may use your CB radio for the business or organizational aspects of a campaign, if you follow all other applicable rules);
[11] to communicate with stations in other countries, except stations in Canada (on General Radio Service).
[12] to transmit a false or deceptive communication.
{B} You must not use a CB station to transmit communications intended for live or delayed rebroadcast on radio or television. You may use your CB station to gather news items or to prepare programs.
RULE 14 - Paying for Actual Use {A} You may not accept direct or indirect payment for transmitting with a CB station.
{B} You may use a CB station to help you provide a service, and be paid for that service, as long as you are paid only for the service and not for the actual use of the CB station.
RULE 15 - Who Is Held Accountable You are responsible for all communications which are made BY YOU from a CB station.
RULE 16 - Time Limit of Transmissions {A} You must limit your CB communications to the minimum practical time.
{B} If you are communicating with another CB station or stations, you, and the stations communicating with you, must limit each of your conversations to no more than five (5) continuous minutes.
{C} At the end of your conversation, you, and the stations communicating with you, must not transmit again for at least one minute.
RULE 17 - Identification Methods {A} You need NOT identify your CB communications...
{B} You are ENCOURAGED to identify your CB communications by any of

the following means:
[1] Previously assigned FCC CB call sign
[2] K prefix followed by operators initials and residence zip code
[3] Your name;
or
[4] Description of your organization including name and any applicable operator unit number
{C} You are encouraged to use a "handle" (nickname) ONLY IN CONJUNCTION WITH the methods of identification listed above in paragraph B of this section.
RULE 18 - Emergency Usage and Assisting Travelers {A} You must at all times and on all channels, give priority to emergency communications.
{B} When you are directly participating in emergency communications, you do not have to comply with Rule 16 about length of transmissions. You must obey all other rules.
{C} You may use your CB station for communications necessary to assist a traveler to REACH A DESTINATION or to RECEIVE NECESSARY SERVICES. When you are using your CB station to assist a traveler, you do not have to obey Rule 16 about the length of transmissions. You must obey all other rules.
RULE 19 - Remote Control Operations {A} You MAY NOT operate a CB station transmitter by RADIO remote control.
{B} You MAY operate a CB transmitter by WIRELINE remote control IF you obtain specific approval in writing from the FCC. To obtain FCC approval you must show why you need to operate your station by wireline remote control. Send your request and justification to: FCC, Gettysburg, PA 17325.
If you receive FCC approval, you must keep the approval as part of your station records (read Rule 27 on station records).
RULE 20 - Telephone Patches and Telephony with CB {A} You MAY connect your CB station transmitter to a telephone if you comply with ALL of the following:
[1] You or someone else must be present at your CB station and MUST-
(i) manually make the connection (the connection cannot be made by remote control);
(ii) supervise the operation of the transmitter during the connection;
(iii) listen to each communication during the connection; and
(iv) stop all communications if there are operations in violation of these rules.
[2] Each communication during the telephone connection must comply with all of these rules.
[3] You must obey any restriction that the telephone company places on the connection of a CB transmitter to a telephone.
{B} The CB transmitter you connect to a telephone must not be shared with any other CB station.
{C} If you connect your CB transmitter to a telephone, you must use a phone patch device which has been registered with the FCC.
RULE 21 - Penalties may not be current penalty information. {A} If the FCC finds that you have WILLFULLY or REPEATEDLY violated the Communications Act or FCC Rules, you may have to pay as much as $2,000

for each violation, up to a total of $5,000.
{B} If the FCC finds that you have violated any section of the Communications Act or FCC Rules, you may be ordered to stop whatever action caused the violation.
{C} If a federal court finds that you have WILLFULLY and KNOWINGLY violated any FCC Rule, you may be fined up to $500 for each day you committed the violation.
{D} If a federal court finds that you have WILLFULLY and KNOWINGLY violated any provision of the Communications Act, you may be fined up to $10,000 or may be imprisoned for one year, or both.
RULE 22 - Correspondence from FCC {A} If it appears to the FCC that you have violated the Communications Act or these rules, the FCC may send you a discrepancy notice.
{B} Within the time period stated in the notice, you must answer with:
[1] A complete written statement about the apparent discrepancy;
[2] A complete written statement about any action you have taken to correct the apparent violation and to prevent it from happening again; and
[3] The name of the person operating at the time of the apparent violation.
{C} If the FCC sends you a letter asking you questions about your CB radio station or its operation, you must answer each of the questions with a complete written statement within the time period stated in the letter.
{D} You must not shorten your answer by references to other communications or notices.
{E} You must send your answer to the FCC office which sent you the notice.
{F} You must keep a copy of your answer in your station records.
RULE 23 - Notice of Interference {A} If the FCC tells you that your CB station is causing interference due to technical reasons, you must follow all instructions in the official FCC notice (This notice may require you to have technical adjustments made to your equipment).
{B} You must comply with any restricted hours of CB station operation which may be included in the official notice.

RULE 24 - Service to Transmitters and Antennas {A} You may adjust an antenna to your CB transmitter and you may make radio checks (One-way transmissions for a short time in order to test the transmitter).
{B} Each internal repair and each internal adjustment to your FCC type-accepted CB transmitter must be made BY or under the DIRECT SUPERVISION of a person licensed by the FCC as a GENERAL RADIOTELEPHONE OPERATOR.
{C} Except as provided in paragraph D below in this section, each internal repair and each internal adjustment of a CB transmitter in which signals are transmitted must be made using a NON-RADIATING antenna (Dummy Load).
{D} Brief test signals (signals not longer than one minute during any five minute period) using a radiating antenna may be transmitted in order to:

[1] adjust an antenna to a transmitter;
[2] detect or measure radiation of energy other than the intended signal;
or
[3] tune a receiver to your CB transmitter.
RULE 25 - Modifications to Transmitters {A} You must not make or have any one else make any internal modification to your CB transmitter.
{B} Internal modification does NOT include:
[1] Repair, or servicing of a CB station transmitter; or
[2] Changing plug-in modules which were type-accepted as part of your CB transmitter
{C} You must not operate a CB transmitter which has been modified by anyone in any way, including modification to operate on unauthorized frequencies or with illegal power.
RULE 26 - FCC Inspections {A} If an authorized FCC representative requests to inspect your CB station, you must make your CB station and records available for inspection.
{B} A CB station includes all of the radio equipment you use.
RULE 27 - Keeping Station Records Your station records include the following documents, as applicable: [1] A copy of each response to an FCC violation notice or an FCC letter.
[2] Each written permission received from the FCC.
RULE 28 - Contacting the FCC {A} Write to your nearest FCC Field Office to: [1] Report an interference complaint; or [2] want to know if the FCC has type-accepted a particular transmitter for CB service.
{B} Write to the FCC if you have questions about the CB Rules: FCC Private Radio Bureau Personal Radio Branch Washington, DC 20554

Okay, please understand that I'm not a lawyer, so don't take what I'm about to say as legal gospel. Anyway, federal regulations are exactly that - regulations. As a matter of course, regulations are handled as a matter of civil law, not criminal law (felony is a term for a type of criminal offense). However, as you'll note in the U.S. Code, there are many cases where repeated or extensive violations of civil law can become a crime. Likewise, failure to meet legal obligations under civil law can often become a crime (just ask those who have been fined by the IRS).

> (snip) Don't get me wrong, it still is
> a fine and it is messing with the
> federal government, but is not breaking
> any law when violating part 95 of the
> FCC rules. (snip)

No, regulations are still laws. Regulations are enforced differently than laws concerning criminal offenses, but they are still laws (civil laws) and they do carry the force of law behind them.

Let me give you something to compare this to. When you get caught speeding, it is handled differently than if you rob a bank. For a minor speeding violation (a civil violation, this one commonly called a misdemeanor), you are not arrested and you don't have to go before a judge - you can simply pay the fine. But, you can go before a judge if you desire. And you can also be brought before a judge if you fail to pay the fine. When you appear before the judge, you can have your case heard by that judge or you can request a trial by jury. And, finally, in either of the last two situations, the judge or jury can either find you innocent, increase or decrease the fine, or impose additional punishment (jail time, for example).

The same is true for the way most federal regulations are handled. When you receive a Notice of Apparent Liability from the FCC stating that you have violated a federal regulation, you can either pay the fine (forfeiture), request a hearing with the FCC, or request a trial. If you choose to go to trial, you can either have a judge hear the

case or request a trial by jury. And, just like with the traffic offense, the judge or jury can either find you innocent, increase or decrease the fine, or impose additional punishment.

All of this is spelled out in the Code of Federal Regulations, Title 47, Part 1 (Practice and Procedure).

http://www.access.gpo.gov/cgi-bin/cfrassemble.cgi?title=200047

Title 47 of the Code of Federal Regulations is the whole body of regulations established by the FCC as the regulatory entity. Part 95, the CB rules, are part of Title 47. Part 1 of Title 47 spells out the procedures for resolution of disputes with the FCC. Part 0 of Title 47 establishes the relationship to Title 18, Title 47, and so forth, of the U.S. Code. Title 47 of the U.S. Code creates the FCC as a regulatory agency.

These procedures are fairly standard, so you will find similar procedures used by most government regulatory agencies (the IRS, EPA, etc).

Speak of killfiles and oop pops the devil. Where am I? Lost in the woods,
of course. It is not my duty to take sides any more than it is my civic
duty to buy tickets to the local rollerderby team just because they put my
town's name on their uniforms.

Toll Free each example you gave there was death or serious bodily harm involved. Otherwise no such felony, last time I looked anytime you kill someone that is a felony.

Hi Brainbuster,

I'll keep my fingers crossed for you. Sounds like you've all got some
good things brewing (Besides ale. :-D) in England re. CB. Best of
luck.

Please stop posting this! You can accomplish the same
thing with a link. Also google's tos prohibits multiple
posting of the same response, and this is reason enough
to have you account pulled.

Just a little friendly advice.

Landshark

> {C} You must, at all times and on ALL channels, give priority to
> emergency communication messages concerning the immediate safety of
> life or the immediate protection of property.
> {D} You may use ANY channel for emergency communications or for
> traveler assistance.
> {E} You must share each channel with other users.
> {F} The FCC will not assign any channel for the private or exclusive
> use of any particular CB station or group of stations.
> {G} The FCC will not assign any channel for the private or exclusive
> use of CB stations transmitting single sideband or AM.
> RULE 8 - Antenna Height
> {A} "Antenna" means the radiating system (for transmitting, receiving
> or both) and the structure holding it up (tower, pole or mast). It
> also means everything else attached to the radiating system and the
> structure.
> {B} If your antenna is mounted on a hand-held portable unit, none of
> the following limitations apply;
> {C} If your antenna is installed at a fixed location (whether
> receiving, transmitting or both) it must comply with EITHER one of the
> following:
> [1] The highest point must not be more than 20 feet (6.10 meters)
> higher than the highest point of the building or tree on which it is
> mounted;
> or
> [2] The highest point must not be more than 60 feet (18.3 meters)
> above the ground.
> {D} If your CB station is located near an airport, and if your antenna
> structure is more than 20 feet (6.10 meters) high, you may have to
> obey additional restrictions. The highest point of your antenna must
> not exceed 39.37 inches (1 meter) above the airport elevation for
> every 109.36 yards (100 meters, 1 hectometer) of distance from the
> nearest point of the nearest airport runway. Differences in ground
> elevation between your antenna and the airport runway may complicate

> this formula. If your CB station is near an airport, you may contact
> the nearest FCC field office for a worksheet to help you figure the
> maximum allowable height for your antenna.
> WARNING: Installation and removal of CB station antennas near
> powerlines is dangerous. For your safety follow the installation
> directions included with your antenna.
> RULE 9 - Equipment
> {A} You must use an FCC type accepted CB transmitter at your CB
> station. You can identify an FCC type accepted transmitter by the
> 'type acceptance'label placed on it by the manufacturer. You may
> examine a list of type-accepted equipment at any FCC Field Office or
> at FCC Headquarters. Use of a transmitter which is not FCC
> type-accepted voids your authority to operate the station.
> {B} You must not make, or have made, any internal modifications to a
> type-accepted CB transmitter. (*read Rule 25) Any internal
> modification to a type-accepted CB transmitter cancels the
> type-acceptance, and use of such a transmitter voids your authority to
> operate the station.
> RULE 10 - Power Output
> {A} Your CB station transmitter power output must not exceed the
> following values under any conditions:
> AM [Amplitude Modulation] - 4 watts carrier power [CP]
> SSB [Single Side-Band] - 12 watts peak envelope power [PEP]
> {B} If you need more information about the power rule, see Part 95/
> Subpart E.
> {C} Use of a transmitter which has carrier [CP] or peak envelope power
> [PEP]in excess of that authorized voids your authority to operate the
> station.
> RULE 11 - Linear Amplifiers
> {A} You may not attach the following items (power amplifiers) to your
> type-accepted CB transmitter in any way:
> [1] External radio frequency [RF] power amplifiers, also called linear
> amplifiers, or linears;
> or
> [2] Any other devices which, when used with a radio transmitter as a
> signal source, are capable of amplifying the signal.
> {B} There are no exceptions to this rule and use of a power amplifier
> voids your authority to operate the station.
> {C} The FCC will presume you have used a linear or other external [RF]
> power amplifier if-
> [1] It is in your possession or on your premises; and
> [2] There is OTHER EVIDENCE that you have operated your CB station
> with more power than allowed by CB Rule 10.
> {D} Paragraph C above in this section does not apply if you hold a
> license in another radio service (HAM, etc.) which allows you to
> operate an external RF power amplifier.
> RULE 12 - Permitted Communications {A} You may use your CB station to
> transmit two-way plain language communications. Two-way plain language
> communications are communications without codes or coded messages.
> Operating signals such as "ten codes" (10-4, etc.) are not considered

> codes or coded messages. You may transmit two-way plain language
> communications only to other CB stations, to units of your own CB
> station, or to authorized government stations on CB frequencies about-
> [1] Your personal or business activities, or those of members of your
> immediate family living in your household;
> [2] Emergencies;
> [3] Traveler assistance;
> [4] Civil Defense activities in connection with official tests or
> drills conducted by, or actual emergencies announced by, the Civil
> Defense Agency with authority over the area in which your station is
> located.
> {B} You may use your CB station to transmit a TONE SIGNAL only when
> the signal is used to make contact, or to continue communications
> (Examples: tone operated squelch, selective calling circuits). If the
> signal is an audible tone, it must last no longer than 15 seconds at
> one time. If the signal is a subaudible tone, it may be transmitted
> continuously only as long as you are talking.
> {C} You may use your CB station to transmit one-way communications
> (messages not intended for two or more CB stations) only for emergency
> communications, traveler assistance, brief tests (radio checks) or
> voice paging.
> RULE 13 - Illegal Communications {A} You must NOT use a CB station-
> [1] in connection with activity which is against federal, state or
> local law;
> [2] to transmit obscene, indecent or profane words, language or
> meaning;
> [3] to interfere intentionally with the communications of another CB
> station;
> [4] to transmit one-way communications, EXCEPT for emergency
> communications, traveler assistance, brief tests (radio checks) or
> voice paging;
> [5] to advertise or solicit the sale of any goods or services;
> [6] to transmit music, whistling, sound effects or any material to
> amuse or entertain;
> [7] to transmit any sound effect solely to attract attention;
> [8] to transmit the word "MAYDAY" or use any other international
> distress signal, EXCEPT when your station is located in a ship,
> aircraft or other vehicle which is threatened with GRAVE AND IMMINENT
> danger and you are requesting IMMEDIATE assistance.
> [9] to communicate with, or ATTEMPT to communicate with, any CB
> station more than 155.3 miles (250 kilometers) away;
> [10] to advertise a political candidate or political campaign (You may
> use your CB radio for the business or organizational aspects of a
> campaign, if you follow all other applicable rules);
> [11] to communicate with stations in other countries, except stations
> in Canada (on General Radio Service).
> [12] to transmit a false or deceptive communication.
> {B} You must not use a CB station to transmit communications intended
> for live or delayed rebroadcast on radio or television. You may use
> your CB station to gather news items or to prepare programs.

> RULE 14 - Paying for Actual Use {A} You may not accept direct or
> indirect payment for transmitting with a CB station.
> {B} You may use a CB station to help you provide a service, and be
> paid for that service, as long as you are paid only for the service
> and not for the actual use of the CB station.
> RULE 15 - Who Is Held Accountable You are responsible for all
> communications which are made BY YOU from a CB station.
> RULE 16 - Time Limit of Transmissions {A} You must limit your CB
> communications to the minimum practical time.
> {B} If you are communicating with another CB station or stations, you,
> and the stations communicating with you, must limit each of your
> conversations to no more than five (5) continuous minutes.
> {C} At the end of your conversation, you, and the stations
> communicating with you, must not transmit again for at least one
> minute.
> RULE 17 - Identification Methods {A} You need NOT identify your CB
> communications...
> {B} You are ENCOURAGED to identify your CB communications by any of
> the following means:
> [1] Previously assigned FCC CB call sign
> [2] K prefix followed by operators initials and residence zip code
> [3] Your name;
> or
> [4] Description of your organization including name and any applicable
> operator unit number
> {C} You are encouraged to use a "handle" (nickname) ONLY IN
> CONJUNCTION WITH the methods of identification listed above in
> paragraph B of this section.
> RULE 18 - Emergency Usage and Assisting Travelers {A} You must at all
> times and on all channels, give priority to emergency communications.
> {B} When you are directly participating in emergency communications,
> you do not have to comply with Rule 16 about length of transmissions.
> You must obey all other rules.
> {C} You may use your CB station for communications necessary to assist
> a traveler to REACH A DESTINATION or to RECEIVE NECESSARY SERVICES.
> When you are using your CB station to assist a traveler, you do not
> have to obey Rule 16 about the length of transmissions. You must obey
> all other rules.
> RULE 19 - Remote Control Operations {A} You MAY NOT operate a CB
> station transmitter by RADIO remote control.
> {B} You MAY operate a CB transmitter by WIRELINE remote control IF you
> obtain specific approval in writing from the FCC. To obtain FCC

And what about making FFT, shifting the result (in frequency domain)
and then making IFFT (inverse FFT)? Maybe there are programs
that can do it in "real time" mode?

Of course one would still have to use his own ears for
judging how much the signal must be shifted in frequency
domain.

Sparky piddled with:
Geez, twistie, you sure became civilized all of a sudden!

"The problem is with your inability to debate a subject, Sparky, not mine. You get back what you put in..it's the golden rule, something you apparently were never taught as a child. Treat those as you wish to be treated. Dogie came in here playing stupid and you were waving an N8 flag cheering him on. As a result, the respect each of you receive here is well deserved."

Using polite comments, almost sucking up to Dwight --

"Now now, is there not enough of us that you are envious of without adding Dwight to your list? Dwight happens to share his knowledge in a congenial manner and unlike you, has the ability to usually discuss a subject without getting stupid. I have had my squabbles with Dwight in the past, difference is, he doesn't let his personal feelings cloud his judgement like you do with each post. He usually sticks to the facts, and when it's his opinion, he states so without reservation. He also can admit if he is wrong and move on from it, not dwell on it and attack the person who pointed it out."

  a real change from your posts from the past year or so. And you aren't even using any aliases this time.

"Of course not. And my email has never changed in over two years. Not once."

  BTW, what ever happened to 1mangang and N7VCF@cotse.com?

"Well, which is it? lmangang or 1mangang? Or am I both? You never answered that."

You aren't N7VCF, are you? Now why would you use his callsign, hmm....

"Look at his nic then ask "Nad that question.
The question is, why would you care?
  I'm not the gent you tried to come off as, although I have had contact with him recently."

I'm not either, and you are ignoring the questions (as if THAT wasn't expected).

"I have no idea what happened to the gentlemen to who you refer. I do know that they both rattled dogie something fierce, and he must have

done a number on you as well, "cause I don't hink either has posted here for like 10 months or something. Why the sudden obsession with these dudes, unless you were posting as dogie when they abused you and you're still smarting? As for using a call, the only call I would ever use would be my own."

The BEST newsreader for killfiles and millions of filters is Xnews!

But, with AOL and CompuServe, you may be stuck with their newsreaders,
since they don't let you access the news servers with outside software.

Leland,

AND plus the fact that 28.085 isn't even authorized for phone, it is even more easy to pick out the intruders--and these knotheads are all the way up to 28.300! Make no mistake, this is NOT going to be allowed to go on. I assume you see the enforcement actions against trucking companies--the latest one being the wrecker outfit using 10 meter rigs for "dispatch". In spite of this, it seems to have spread. I am now hearing them on I-85 which goes north-south thru here. I know this sounds mean (I am donning my flame suit), but I am monitoring this in my local area, reporting same to ARRL for the stats, and actively listening out when I am driving the interstate myself.
Those of us who have HF radios should do the same in order to help bring this to a halt. If there is no consequences for this, then they will move right on up and down the bands looking for that ever quieter "channel". I am confident, however, that this issue will be addressed ever more aggressively. RH has only just begun to deal with it, and I bet we'll see more and more of these busts in the future.

>"In the first place, that idea is no more prevalent among cbers than it >is nocode hammies who mod their rigs for eleven meter."

First of all you just assumed. Since nobody is going to ID themselves in any meaningful way there is no way to gage the magnitude. For all I know it could be Tim out there bootlegging my callsign. On the other hand demonstrating the incursions in to 10m is easy. Just tune to the low end of the band for any phone transmissions. Any you find with out a valid Ham call sign proves the point. Not only that but records are now being kept to get some hard numbers for the magnitude of the problem

>"Are you speaking strictly of power users? Out of banders? Anyone that >doesn't conform to the letter of the law? Anyone that doesn't agree with >you?"

That goes for any operator in or around the 11m band. They don't disagree with me they disagree with what Part 95 has to say. What they don't like is

being reminded about it, and being referred to as criminals. The term criminal is commonly applied by the general public to those who frequently violate the law knowingly and fits the description of several people on this group including yourself.

>"This isn't a problem anywhere, save for among a few of you in this
>group using it as a catalyst for something that simply isn't there.

When I tune to 28.085 and there is a couple of truckers there talking in perfect North American English, with no ID, that's not a problem? I'm not talking about a once a year thing, or a month, or a week, but more like everyday. That's a problem.

>Sparky was going to face off with this and realized he really knew
>nothing of the freqs that are considered the freeband, and aptly
>demonstrated such. He at least had the good sense to back off the
>subject after learning about the empty freqs. and how wrong he really
>was."

I'll tell something about those so-called 'empty frequencies'. They are empty for a reason. They are called 'guard bands or frequencies'. They are there to add a bit of space between other frequencies that are in use to reduce interference. A perfect example is your TV set. For broadcast over the air stations do you find two local TV stations on adjacent channels? No you don't because the empty channels are there to help eliminate interference from one station with another at the viewer's TV set.

So the 11m problem is like a weed,
it's necessary to pull it out by the roots to get rid of it.

>"We know how you must feel. Day after day, night after night, month
>after month, crying, whining, hoping, praying, that the horrible cbers
>will be taken care of.

No but you spent much of your time digging through thousands of old usenet messages. Hasn't done you any good yet.

> Extreme frustration over such mundane matters
>appears to be a precursor to bipolarity."

You should at least research a new term that you start using to make sure you know what it means, and at least get the term right. It's called "bipolar". In your case I guess "bipolarity" you must be refering to yourself like "AC-DC". ;-))

>"As no doubt could the hammies."

No problem there. We WANT our bands cleaned up.

For CB however there is general lack of interest to do it,

>"As among the hammies."

You must be hanging out on another news group.

>and there is a group who is VERY interested that it stays a mess.

>"As among the hammies."

More like Twisted, Tim, Peakaboo, ...

>So once the garbage starts spilling over the line,

>"I agree.

I'm glad you do.

>Here you are in a cb room and self admitted you don't even use
>it.

I'll bet you have a strong opinion about abortion, but yet you can't get pregnant, and I'll also wager that never stopped you from voicing that opinion either. You're not a female but you feel perfectly entitled to tell a female what she can and can not do with her body right? So as long as you think you're entitled to stick you nose in to things that don't directly concern you others can do the same with the issue of their choice, and that includes CB radio.

Kenneth,
I know you and others sincerely believe that "freebanding" does no harm, and that those regulations
regarding CB are "antiquated". That belief is predicated on the incorrect
assumption that that
spectrum is "empty" and that there are no users of said spectrum.

"There is a huge difference between the spectrum and a few frequencies and I haven't seen anyone say the spectrum is empty. Perhaps you meant otherwise."

Tell us exactly what rules you would abolish, what frequencies you would open up for "freebanders", and why.

"This is just too tempting to let only one voice be heard on this subject. I wouldn't change a thing, except maybe the DX rule. I like it the way it is. Ducks take to personal attacks here."

How would you protect the rights of those agencies who do, either hold certain frequencies, or use them even if rarely?

"Not one person has given a single example of what they are in need of protection from, save for the argument that "anything is possible."

What about guard channels that are designed
to prevent interference by providing a buffer between users?

"Same as above."

73
Jerry

"The harmonics issue is your strongest point yet. Last year you gave me a boatload of info in email concerning the harmonics factor, which I acknowledge COULD be a factor. Despite a search, I could not find a single instance where simply DXing the freeband has caused any of the problems hyped here. It simply is a nonissue, and the feds appear to agree with me, based on their priorities."

> :) ELPASOGUNSLINGER

The segregation laws were violations of basic civil rights, which is not the case with freebanding. Also, the civil rights movement resulted in widespread and sweeping reform, including at least one Constitutional amendment. The movement was based upon morality, human dignity, and the unconstitutional nature of those laws. This is HARDLY the case where CB radio is concerned.

Outdated and obsolete laws are commonly called 'blue laws', and are ignored by the public and law enforcement until the time that they are repealed. As stated before, Part 95 is neither outdated nor obsolete - it is obeyed by the majority of the general public, and is enforced (although not very well) by the FCC. Part 95 is not a 'blue law'.

Your concept of "general acceptance" is more widely referred to as 'de facto'. It is -extremely- unlikely that restrictions on the use of the radio spectrum will be eased, de facto or de jure, because of the highly limited nature of the resource. As the demands on the ether increase, so will the restrictions placed upon it. It is more likely that a band that is as heavily abused as the Citizen's Band will be removed from service rather than the restrictions relaxed. This is made even more likely because of the existance of many other legal alternatives to CB radio. Lack of enforcement may well be an indication that the band privileges are about to be revoked.

A current example of this can be seen in the controversy regarding the new low-power FM stations. It was suggested by a coalition of broadcasting stations that allowing a LPFM service would increase the number of illegal broadcasters. This speculation became fact even before all available licenses were issued, and the abuse of the

FM broadcast band is now a critical issue with the FCC.

Finally, "just because a law is 'on the books' doesn't mean it should always be obeyed" is an ad hoc argument at best. If a law is found to be unconstitutional, or not in the interests of the general public, there are legal methods by which that law can be changed or repealed. This can be done in any of the three branches of government. But no government is going to change or repeal a law just because a few spoiled individuals don't like it.

There is no valid excuse here for operating illegally.

Once again you prove to the news group that you are the weakest link.
VFO receive operation is quite legal in/for class D cb radio. Some early
radios had it exclusive. Get a job and try using your real name
instead of your fake Aaron Voobner bit...

No problem, I'm not one either.

> Anyway, federal regulations are
> exactly that - regulations. As a matter of course, regulations are
> handled as a matter of civil law, not criminal law (felony is a term
> for a type of criminal offense).

Ok, so that has been one of my points and you seem to agree.
It is not against federal law when breaking part 95. It is
only after repeated offenses, will you be forwarded to the
Federal District Attorney for prosecution.

> However, as you'll note in the U.S.
> Code, there are many cases where repeated or extensive violations of
> civil law can become a crime. Likewise, failure to meet legal

> punishment (jail time, for example).
>

One comment, why is it called a speed law, not speed rule. I feel it's
because you appear before a duly elected judge and have the right to a
jury trial if you so desire. FCC art 95 you get NALS, then more warnings,
then appear before an FCC comission, not a federal judge or jury.

> The same is true for the way most federal regulations are handled.
> When you receive a Notice of Apparent Liability from the FCC stating
> that you have violated a federal regulation, you can either pay the
> fine (forfeiture), request a hearing with the FCC, or request a trial.

> offense, the judge or jury can either find you innocent, increase or
> decrease the fine, or impose additional punishment.

Forgive me, and I'm not trying to be a pain to you, but I have done a
little looking into this in the past week. I have yet to find where
someone was caught freebanding or using a linear, got a NAL and
was told to appear in federal court. It just doesn't happen unless
they keep repeating the offence, then it get forwarded to the
US federal district attorney (IMHO if you ignore those warnings you
desrve federal time).

> All of this is spelled out in the Code of Federal Regulations, Title

What part are you laughing at?

Hammarlund, SBE, Regency, Lafayette, Johnson and a host of others that made Ham gear also produced CBs with receive VFO; in many cases it was considered a plus, as it saved the cost of receive crystals before the days of synthesis and PLL designs.

If you are laughing at Voob, so be it; he's a wild and funny guy.

If you are laughing at the reply to Voob, Jerk up the other Knee and bust the other side of your face, and tap 100 times on your key in CW

" I will think before I type, lest I make a fool of myself in public again....."

Cheers,

David

Huh? This is the first time I've posted this in quite some time. OK.
How often will you "allow" FCC rules to be seen in the NG? Once a
month? Once every six months?

> Please stop posting this!

Why, Landshark? Why are you so concerned with FCC rules being seen in
a CB newsgroup? Are you afraid if they are seen too much then they
might be embarassing to rulebreakers? Or are you concerned with
"bandwidth"? How about those "DX Reports" that Twisted and Tim Nebo
posts? They get pretty long. What about that bandwidth?

> You can accomplish the same

Would most folks (as Dick did above) respond to a posted opinion by
calling the poster a fanatic and recommend they be (figuratively)
killed or thrown out a door? I think not.

Well I'm sorry Dick. Maybe it is time to take sides. You can't very
well condemn truckers on 28.025 Mhz while simultaneously giving Bubba
advice on how to open his PLL to cover 25 to 32 Mhz.

Hey it's Cecil. Look, the trick with Cecil is that he will defend
ANYTHING, doesn't matter what it is, he just likes the debate. So what
you have to do is post the OPPOSITE of your opinion. Then Cecil will
swoop down on your thread and proceed to defend your ACTUAL opinion.
:)

Who decides what rules are "made to be broken"? The individual? The majority? Which majority? Certainly the majority in rrcb believe FCC laws are meant to be broken. But ask the same question to a ham newsgroup and you'll get the opposite reaction. Or try putting the question to a neutral group, say people on the street. Ask them if they believe CB radio operators should obey FCC laws or not. I doubt you could find a majority to agree with your point of view. So you are trying to convince us that since your small minority feels that "the law is meant to be broken" there should be no further discussion on the matter.

I disagree.

I'm still waiting for you to cite some case law to support your side of
the fence on the issues Twisted.

>"The fact that none exist support perfectly my contentions."

Actually mine, and others here who share the same view. So you're perfectly happy that you can't even find any case law to support your own silly arguments! I figured I'd give you an honest chance to find something to support your view point. Instead you seem to rather like squandering it with flippant remarks, and wasting your time digging through old Usenet archives for other people's messages to resurrect. So now it's just fine to repeatedly remind you, and everyone else on the group, that not only are your arguments illogical, they also do not enjoy the status of a valid legal theory to use as self-defense in a court of law, when pursued by the FCC for Part 95 violations.

So Aaron if these are being used illegally, what proof do you have?
Who, when, where? You must have proof of a crime to convict, otherwise
you are doing what they would call hear-say7 Which means nothing in a
court of law.

lol

The Golden Rod is a commercial antenna first, then marketed to CBers and amateurs.

It is a military design from the mid 80s.

Most of the "bigstrap" antenna manufacturers have SOME type of antenna based on it now, as well.

FYI. In Memphis, we blew the top off one, and lit the ends of fire, with app. 45Kw forward power output.

However, it was still just BARELY moving the reflected meter, with a 1kw slug in it.

That was one, of about 20, different sections.

If you would like to take the time to research it all, be my guest.

I provided the link more than anything, to show people where to START
looking.

I, myself, have better things to do than educate people here about the finer
points
of motor vehicle laws. However, with the link I provided, it will give you
something
to look for.

Which is something more than I can say for most all of your posts, Aaron.

Because, they are type accepted for use as such.

You just have to use the instructions IMPLICITLY, and then
they are NOT able to be used out-of-band, or for transmitting.

Geeze Aaron, you should know that. You should ALSO know
that they ARE legal to sell, since they CAN, and ARE used for
legal purposes, as WELL as the fact that they where once
sold over-the-counter, and as such being type accepted, they
ARE still LEGAL to sell on the used market.

Have a nice one Aaron. Notice ALSO that this message is CROSS-
POSTED to another group.

If their is so many conversations about the amplifiers, their must be
interest in it.

If their is interest in it, and they are the majority of questions, answers
and discussions,
then majority rules.

Seems Aaron was ALWAYS the kid that wasn't allowed to play with the rest in
the sandbox, huh?

He had to have his Mommy pushing the other side of the teeter totter.

Use of CB radio, with or without amplifiers, is appropriate for discussion
on
rec.radio.cb

I was one of the originals here.

Recreational Use of CB is the beginning of this group.

People using their CB for RECREATIONAL use.

Radio, meaning it has to do with radio.

CB meaning any and all topics related directly or indirectly to CB.

I suggest YOU learn the proper posting ettiquitte.

Amplifiers CERTAINLY are appropriate for discussion in the recreational use of CB radio.

Why don't you start a new newsgroup that deals with the legalities of CB radio, as
your posts are just as much off topic as anyone here who posts something about
an amplifier. Even more so, since amplifiers are and can be used for recreational
(read that as fun) use on CB.

> you'll never see that.
>
> Jerry

Jerry,

Good post. Not to mention that his legal diatribe is about as off topic as
can be on REC.radio.cb.

This is a forum for talking about the recreational use of CB radio, not the
legalities.

The little troll better start his own, since he is so offended by people
posting what HE claims
is off topic.

lol

What am I fanatical about Aaron?

That I run excessive power? That I promote people LEAVING THEIR LIMITERS IN?

That I promote running clean power?

I think you better get on topic. This is a recreational board, not a legalities board.

I suggest you start a new newsgroup that deals with legalities, since your so concerned with
what is, and isn't supposed to be discussed here. Your one of the biggest offenders of
off-topic posts on this forum.

3687. Apartment antennas

Newsgroup: rec.radio.cb
Date: 2001-10-31 01:16:56 UTC
From: dletteer@aol.com
Message-ID: <20011030201656.28503.00000648@mb-fb.aol.com>
Source record: 102800

I was wondering what people thought was the best antenna for an apartment, either indoor or outdoor? I am trying to get the feel for one. I was looking at the firestik indoor antenna or the midland 3ft no ground outdoor antenna. Any help would be appreciated.

Thanks
Dave

We're not talking about type accepted radios. We're talking about selling a VFO in a CB newsgroup, remember? It is unlawful for a CBer to modify his type accepted radio in any way. That includes tacking on a VFO.

Now....explain to me how it's legal for you to run 45,000 watts?

Hi Dave,

The tried and true 1/2 wave dipole. I used one made up of a white balun, wire with white insulation, and fed with white (marine) coax. I mounted the balun in the top corner and extended the wires along the adjacent seams where the ceiling met the wall. Since both ceiling and wall where painted white, it was aesthetically pleasing and outperformed many a "compromise" antenna. Hope that helped. :-)

You mean you like it illegal. Funny, that's what I hear from a lot of
hard core 'freebanders'. The worst thing that could happen is for the
freeband to be legalized. If the freeband were legalized, they'd have
to contend with millions of new users flooding their (formerly stolen)
turf. Pretty soon the "freeband" would sound like the lower 40. So
they'd rather keep it illegal -- and keep trespassing.

Hmm--I smell smoke. Voobner must be trying to think of how mounting a CB onto a cow would
be a "mooooving" violation! LMAO! I, too, am sorry, but this was "udderly" irresistible!

Excellent post! Those damn cb illegals are even interfering with my
hearing aides! Its terrible. I thought Martha was talking to me and
when I answered her she thought old timer's disease had come on me!
Next she'll be trying to put me in depends diapers and sending me to
the old folks home. She'll get her a young stud to run around with.

All because of those damn illegal cbers. HAhahaha!

Bob NW8N

Jay,

I must admit I've never seen that although nothing surprises me. Like you say, much of that stuff is
hype--"placebos" that do nothing but LOOK really rad, so it sells. Offhand, I'd still say it wouldn't
really do anything since the vehicle is still the groundplane. I "think" it is just overkill, but then.....
I've been wrong before!

BTW, I was in a truckstop CB shop last Saturday and watched the guy install a "connex" board--
whatever the hell that is---. It took about 30 minutes, plus he sold the trucker a mike, and charged
him $125!! Mein Gott im Himmels!! The "tech" said he does about 2 of these a day. WOW!
And the thing is, I don't think the radio itself cost that much. What gives? You mean if I opened
a "shop" installing noise toys, antennas, mikes and checking SWR, I could make that kind of money? MERCY! LOL!

Good Lord son! With that kind of power you'd turn my hearing aides
into little atomic bombs in my head. The younger generation has no
respect for us senior citizens. Martha's gonna put me in a nursing
home because she thinks old timer's disease has come over me. Damn
illegals!!! I get so mad at these guys that Martha says I'm gonna have
a another stroke. If I weren't so old I'd take you damn illegals out
in the woodshed and switch your behinds!

I thank the Lord Jesus every day that we have people like Aaron,
Sparky, and Leland to do the Lord's work on this newsgroup.

Put me over there with Voobner, Sparky, and Leland. They are on the Lords mission to rid the cb of those damn illegals. Martha says I'm going to blow another artery, but those damn illegals really chap my behind! Next they'll move in next to my retirement community and run so much power that they start shuttin down us old folks' pace makers. I'll bet the illegals even think that is funny. Just wait till they get to my age.

You need a fourth category, militant neutral. You are old enough to
remember Rick's reply to the German officer asking his nationality in
Casablanca -- drunkard.

The gung-ho shall inherit the earth. The bastards deserve it.

Show me one time and place I ever gave anyone advice on opening a PLL.

The 28 MHz guys don't need my condemnation; a lot of other things perhaps
but I refuse to do an imitation of Rev. Johnson in Blazing Saddles.

As I have to read your stuff second-hand I don't know whether to thank them
or killfile them as well for repeating it.

As you use a phony name, I will simply let my alter ego sign this one.

The Velvet Codpiece

Tell it like it is Aaron! Those foul mouthed illegal cbers need to be given the what for. Why we had an accident just the other day at the retirement community. Caused by a foul mouthed illegal cber! He was runnin so much power that he came over Miss McCrory's 8 track player while she was listening to the best of the Lawrence Welk show. The filthy words that came out of her RCA console got the poor old soul so upset that she came right off her walker and broke a hip. Miss McCrory is the sweetest lady you'd ever want to meet and never has a bad word about anybody. Now she's all gimped up in a hospital bed and they say she'll never walk again. I even think another stroke has come over her since her lip is curled up. The Good Lord will make sure those damn illegals burn in hell fire for this!

3717. on the legality of "free-banding" issue , and the "bigger picture"

Newsgroup: rec.radio.cb
Date: 2001-10-31 02:33:55 UTC
From: Kenneth Vaughan <kenneth.vaughan@worldnet.att.net>
Message-ID: <nqJD7.90525$WW.5022092@bgtnsc05-news.ops.worldnet.att.net>
Source record: 102830

you know the anti key clowns are "technically" correct. free banding is illegal.
ill say it agian....free banding is illegal. now to the part that the antis dont recognise,or refuse to recognise. the feds could, if they were so inclined....rid the air waves of linears,export radios etc. the purveyors of these products are on the internet 24-7-365!!! they are openly selling 11 meter linears,freeband radios etc,.....and openly offer conversions/modifications etc that are expressly forbidden by fcc rules. ..... now isnt this a strange situation,kinda like the crack house on the corner.....that the local police know is there.....but it never gets busted. now my friends.....lets pause to consider why this is the case.....

i submit that the truth of the situation is complex,and cannot merely be explained upon the basis of lack of funding.....i mean that in most cases the mere mailing of a "cease and desist" letter threatening a $10,000.00 fine would be sufficient to stop the sales of these items by most businesses. i know it would me...if i were involved in the sale of these items. you may ask "ok smart guy,whats the real reason these things arent being done?" well lets consider.....the electronics business is a huge concern. billions of dollars are spent upon this equipment world wide.(yes,i said billions) how do i know this? i talk to free band radio operators from all over the world. canada,england,austrailia,south america,central america.....quite a market ehh??.....now who does this money support??? it supports our friends in weaker regimes,with weaker economies.
1) SOUTH KOREA
2)THE PHILIPENES
3)TAIWAN
4)MALAYSIA
these are just to name a few. these regimes(our friends) need this money to help their economies. if the fcc eliminated the supply,and the end user of these products....our "friends" would suffer.
so whats the up-shot of all this?? why its the oldest political game in the world.
its the same game our officials play with the drug trade. make token busts,and deplore the illegality of the trades.....while at the same time allowing enough traffic to continue to support our friends....im sorry if the truth hurts...but there it is.....so all you guys worried that the fcc is gonna "shut you and your little station down"...well mabey a token 2-3 of you a year. but that leaves the rest of us to our own devices. have fun,dont get too ridiculous with the wattage,stay out of 10 meters....and youll likely never have a problem. the key is....dont "be" a problem.....and you wont have any problems!!!!
the rest of you can argue the legalities till your all blue in the

face.....but deep down.....you know what im saying is true.
now,people like me that will risk pointing this out...are most likely going to get busted for sure....cause im an "irritant" to the wrong people.....but you know.....i really enjoy being a pain in the ass. elpasogunslinger

Source record: 102833

>I was wondering what people thought was >the best antenna for an apartment,
>either indoor or outdoor?
Buddy of mine wasted money on the little one, 3 ft(?). I'd find a way to get an arial outside. Problem is any nearby metal can become apart of the antenna via inductance (?). Just being near the element, the metal, will effect the SWR. I've heard some have luck with 102 whips and those 5-6 ft top load whips but you need a good ground plane and it sounds like that would be a challenge, although some may say a metal balcony frame may suffice. Remember, you are close to others so expect alot of RFI complaints!

"If it aint broke, don't fix it"

We are talking about modifications, and the equipment to do so Dwight.

We're talking about
> selling a VFO in a CB newsgroup, remember?

Yes, we are.

It is unlawful for a CBer
> to modify his type accepted radio in any way. That includes tacking on
> a VFO.

No, your wrong. The rules state that it is OK to do so, if you also at the
same
time disable transmit capabilities. That is the same reason the Digi-Scan
devices
had type acceptance.

>
> Now....explain to me how it's legal for you to run 45,000 watts?

It isn't. That was never questioned, Dwight.

Exactly! Legal or not they are not off
topic. Just like you discussing legalities is on
topic. But if you do nothing more than post
the rules as a response or paste a section for
a response then it is against Google TOS.
Also this little bit of info you might want to be
aware of before you start throwing out names and
addresses again.

Defame, abuse, harass, stalk, threaten or otherwise violate the legal rights
(such as rights of privacy and publicity) of others.

Impersonate another person or entity, or falsify or delete any author
attributions, legal or other proper notices or proprietary designations or
labels of the origin or source of software or other material contained in a

Oh Come on Aaron, it's your little buddy
in Pa. And yes you are blocked out idiot.
I only see your posts when some one quotes
like this.
Again, please ask your snitch friend @Home,
He'll tell you the same thing. Please, I beg you,
change your screen name, change it a dozen,
two dozen times, it just keeps building a case
against you for purposely trying to by pass
newsgroup filters.
I'm not forcing you to read my posts, use a
filter, I don't change screen nics like you. It
sure has been nice not seeing yours, Dweebo boy
or Gilligans BS posts too.

Hello Jerry: The only guy who could see or tell exactly where all the energy went, they nailed to the cross, about 2000 years ago.

I have worked closely with Electromagnetic Engineers and such, and the one guy who really confessed up was a PhD from MIT.

He would tell the group what he wanted, and how he thought we should proceed. He also said that its anybody's ball game as to figuring this stuff out. Ah haw, back to trail and error, well anybody can do that. That's riiiiight!

A experienced guy will approach all designs and installations with a certain amount of caution, and mis belief.

Assmunch, This NG has no filters it is not a moderated group. Thats why your cronic crying and wimpering to @home goes by the wayside, keep building your strawman case. LOL I don't need to ask them anything landcock there are many who have access to this account they can change and create screen names as much as they like i have already had this discussion with @home. I am a paying customer, you are a pathetic putz to them. Maybe you and twisty can exchange stories about the letters they send back to you. As anyone can plainly see you never post anything CB related. Your goal is to get people kicked off of there isp's because they say things you don't agree with. My defense has already been set by your previous and continual posts. The @ home abuse Team already has a sample of what your all about that's why they don't take you seriously. Don't forget to Check your SWR before you go on a long trip.

I am 2 Legit to Quit.

3730. Re: on the legality of "free-banding" issue , and the "bigger picture"

Newsgroup: rec.radio.cb
Date: 2001-10-31 06:18:49 UTC
From: "Leland C. Scott" <abuse@cotse.net>
Message-ID: <dJMD7.33137$Gd6.754220@typhoon.mw.mediaone.net>
Source record: 102843

Kenneth,

The problem with export radios is they are perfectly legal for Hams to own and operate on the Ham bands. I don't think it's really a money issue. Right now there is nothing illegal about anyone owning one of these rigs, or selling them that I know about at the moment. The FCC however takes a different view with amplifiers, so if a CBer has an amplifier they assume it was used even if they never saw it connected. The legality part comes in to play when the radio is operated, either on it's intended Ham bands, by a duly licensed Ham, or illegally outside of those bands by anyone.

It may eventually get to the point where the buyer must produce a valid license to get the radio. I know several Ham Radio mail order outlets that routinely ask for a callsign at least when buying a rig, and I have been to several Ham Radio swaps where it is a POSTED POLICY that NO RADIO TRANSMITTERS will be awarded as a prize to anyone unless they are licensed. The upcoming swap in Fort Wayne IN this November is one of those with such a policy. I have also seen some upset CBers stomp off at some Hamfests when they tried to buy a used HF rig, where the seller asked to see either their license, and the FCC does provide a wallet size one with every full size one, or a valid callsign, and they couldn't produce either one.

So by requiring a license to buy a rig would help choke off the flow of the export rig for illegal use on 11m while still making it relatively easy for legally licensed users to buy them. I doubt many Hams would take a risk selling a rig to an unlicensed person if the result would be loss of their own license too, so the dealing in used radios would soon dry up as well. Normal businesses would have even more to loose. Also requiring a license gets rid of the nonsense where somebody can claim they got the radio for somebody else as a "gift", and they have no plans to use it themselves.

You should stress the "vertical dipole" part. If he built a horizontal dipole the resulting loss of signal with other vertically polarized stations would be very disappointing.

Here is another idea. He could also make a folded 1/2 wave dipole which should fit OK vertically inside of an apartment. It should be about half the length needed for a regular dipole, thus only about 8 or 9 feet total length from end to end. The dipole would have to be closed spaced to get a feed point impedance of around 200 ohms then use a few sections of 50 ohm coax to made a 4:1 balum to match the 50 ohm unbalanced coax feed line to the 200 ohm balanced folded dipole.

actually, a folded dipole isn't the same as a shortened one, Leland...

A folded dipole would have both elements bent away from the vertical..
and would easily fit inside an apartment. Fold one one way, and the
other 90 degrees opposed to the other one, and he should still see
feedpoint impedances around 72 ohms, which is acceptable, and should
provide a 1.4:1 or so SWR. Don't trim the ends for best SWR.. the
antenna works best at a 1.4:1 to 1.5:1. (good SWR does not equal good
radiation efficiency)

I should add that the two elements of the dipole should start out vertical and extend vertically as far as possible before being bent.. If you have 8 foot ceilings, get a pair of 102" stainless whips from Radio Shack, mount them to something that'll stand on its own so that the center is right at the 4 foot mark, measure from the center to the ceiling, then the center to the floor to be sure, and bend the whips one along the floorboards and one along the ceiling away from the wall so that the bends are 90 degrees opposed to each other.

I hate it when I'm not specific enough the first time.

made a 4:1 balum to match the 50 ohm unbalanced coax feed line to the 200
ohm balanced folded dipole.

--
Leland C. Scott
KC8LDO

Leland, folded dipoles are also 18 ft long. What you have described is a
1/4 wave dead short. A folded dipole is a degenerate full wave loop.

If you are getting a 1.5 or so it is because the feedpoint is closer to 30 ohms than 72 and the response will be as wide as a barn door because you are loading every drywall screw and nail for 30 feet in all directions. It may, however, be the best compromise available.

Sounds to me as if the old flagpole off the balcony trick is in order. Ben Laden may have done every apartment dwelling radio nut a favor.

OK... I was gonna stay out of this Voobner business, but I guess
I'll set him straight.

It is, and always has been, perfectly legal to modify the RECEIVE
capabilities of a CB radio, but is not, and never has been, legal
to modify the TRANSMIT capabilities of a CB radio. Those rules
have not changed since the beginnings of CB.

The VFO has a factory-applied label on the rear panel that states
very clearly that the unit is intended to expand the receiving
capabilities of crystal-controlled receivers, and that it is not
legal to use the unit for transmitting. If someone were to buy
the VFO and use it only for receiving, they would not be breaking
the law in any way. There's no way for me or anyone else to keep
someone from using it for transmitting. That's between them and
their conscience. Same goes for virtually any man-made object.
It's legal to own and shoot a gun. It's not legal to shoot that
gun at a person. It's legal to own a car. It's not legal to
drive that car over the speed limit. It's legal to own a knife.
It's not legal to take it in your hand baggage on an airplane.
It's legal to own matches. It's not legal to start arson fires
with them. And so on.

Aaron (or whatever your real name is), your point is well-taken,
but it is not entirely correct. Drop it.

73,
Dean K5DH

Dean,

Dwight makes that mistake a lot.

As a matter of fact, most of the VFO devices tell you to cut the trace
to the TX / RX relay so that TX is DISABLED in the unit when you install.

However, since Dwight used to sell amplifiers to people, he wouldn't care
about that. It doesn't fit his current modus operandi.

Well, if you want to 'milk' this for all it's worth, why don't you
'steer' the original poster to 'hoof' it on over to his local radio
shop where he can find some real 'beefy' antennas.

Hey Lasndshark, whose rights have been violated? Seriously. I am not
here to violate anyone's rights, but if I did I want to know about
it, and if someone else did I want to know how they did it so I won't
do it myself.

BTW, if you have a problem with someone's TOS, wouldn't it be prudent
to take the issue up with their ISP?

How so? How do amplifiers fit within the definition of CB radio?

> I was one of the originals here.

Big whoop.

> Recreational Use of CB is the beginning of this group.

Agreed.

> People using their CB for RECREATIONAL use.

Works for me.

> Radio, meaning it has to do with radio.

A no-brainer.

> CB meaning any and all topics related directly or indirectly to CB.

Who said anything about "directly or indirectly"? Is that a newsgroup
law? After all, when you allow indirect topics, where is the limit?
How about six degrees of separation? Then that would allow just about
anything to be discussed here, which defeats the purpose of topic
related newsgroups.

Illegal operators use frequencies outside the Citizen's Band, and are
therefore off-topic. They use higher power than specified, so they are
off-topic. I have already demonstrated how IOs have more in common
with hams than CBers, the only difference there being a license. But
the IOs hang out in the CB newsgroup, for whatever reason. But it isn't
because they are CB operators, it is because of the equipment they
improperly and illegally use; which, after modification, is no longer
a CB radio.

Freebanders and amp-junkies are nothing more than unlicensed pirates that are trying to hide behind the no-license status of CB radio, and have absolutely nothing in common with proper and legal CB radio. They are off-topic.

> I suggest YOU learn the proper posting ettiquitte.

I suggest YOU learn some qualitative reasoning skills.

If you are suggesting the people ignore the law to help the economies
of third-world countries, that's lame.

I agree that the FCC enforcement lately has been equally lame, but
I also understand that they are in the middle of cleaning up that
LPFM fiasco, as well as several other more important issues. Also
consider that the majority of the RF spectrum is allocated for uses
other than radio communication, and that the FCC is somewhat under-
funded for widespread enforcement efforts. So anyone that chooses
to ignore the laws is really just playing Russian Roulette with the
FCC -- if you play long enough, the odds will catch up to you.

I am also aware, through inside information, that enforcement efforts
are going to be stepped up in the wake of the WTC attacks, in an
effort to reduce or eliminate the possibility that terrorists are
using radio to communicate locally and globally. Although they are
looking for terrorists, they will no doubt take the opportunity to
reduce the number of 'casual' pirates in order to make the task easier.
Since this effort also involves treaties with other governments, we
can expect an increase in enforcement worldwide. After the terrorist
threat has been 'removed', don't expect the FCC to slack up on the
enforcement issue again.

47 U.S.C. 322. Exchanging radio communications between land and ship stations and from ship to ship

Every land station open to general public service between the coast and vessels or aircraft at sea shall, within the scope of its normal operations, be bound to exchange radio communications or signals with any ship or aircraft station at sea; and each station on shipboard or aircraft at sea shall, within the scope of its normal operations, be bound to exchange radio communications or signals with any other station on shipboard or aircraft at sea or with any land station open to general public service between the coast and vessels or aircraft at sea: Provided, That such exchange of radio communication shall be without distiction as to radio systems or instruments adopted by each station.

From: Leland C. Scott
Kenneth,
The problem with export radios is they are perfectly legal for Hams to own and operate on the Ham bands. I don't think it's really a money issue....

"Thus, aptly demonstrating once again you haven't a clue."

73's,
Leland C. Scott

Sparky countered with:
If you are suggesting the people ignore the law to help the economies of third-world countries, that's lame.
I agree that the FCC enforcement lately has been equally lame, but I also understand that they are in the middle of cleaning up that LPFM fiasco, as well as several other more important issues. Also consider that the majority of the RF spectrum is allocated for uses other than radio communication,

"Like spectrum auctions?"

and that the FCC is somewhat under- funded for widespread enforcement efforts. So anyone that chooses to ignore the laws is really just playing Russian Roulette with the FCC -- if you play long enough, the odds will catch up to you.
"Not if there aren't any bullets in the gun."

I am also aware, through inside information,

"Heheh....I saw the poll, too....wouldn't exactly call it "inside information."

that enforcement efforts are going to be stepped up in the wake of the WTC attacks, in an effort to reduce or eliminate the possibility that terrorists are using radio to communicate locally and globally. Although they are looking for terrorists, they will no doubt take the opportunity to reduce the number of 'casual' pirates in order to make the task easier.

"You base this on what?"

Since this effort also involves treaties with other governments,

"The FCC is going to monitoring for terrorists? Where the hell did you get that? The FCC is not military and any monitoring they may or may not elect to do will be self-imposed and secondary in nature and not any real significance to the military."

we can expect an increase in enforcement worldwide. After the terrorist threat has been 'removed', don't expect the FCC to slack up on the enforcement issue again.

"You said it yourself, the funds aren't there, so where is this imagined stepped-up enforcement going to originate? Did your "inside information" allow you knowledge of a sudden allocation of funds to be directed to the FCC other than through Congressional allotments? Feel free to enlighten us."

3760. Re: Hams Showing Off Amp Theory To CBers

Newsgroup: rec.radio.cb
Date: 2001-10-31 17:59:19 UTC
From: twistedhed@webtv.net
Message-ID: <2359-3BE03BF7-24@storefull-126.iap.bryant.webtv.net>
Source record: 102775

Sparky looked for acknowledgement with:
Who said anything about "directly or indirectly"? Is that a newsgroup
law? After all, when you allow indirect topics,

"The lack of control of ng topics has always been your sore spot. I
suggest you try to start another group again that conforms to your idea
of what is appropriate. Don't you usually attempt this each fall?"

where is the limit? How about six degrees of separation? Then that would
allow just about anything to be discussed here, which defeats the
purpose of topic related newsgroups.

"I suggest you take it up with those in charge."

Illegal operators use frequencies outside the Citizen's Band, and are
therefore off-topic.

"What is the cb band in the UK?"

They use higher power than specified, so they are off-topic.

"RF output is always a topic. Deal with it."

I have already demonstrated how IOs have more in common with hams than
CBers, the only difference there being a license.

"No, there is another...you are the only one who cares."

But the IOs hang out in the CB newsgroup, for whatever reason. But it
isn't because they are CB operators, it is because of the equipment they
improperly and illegally use; which, after modification, is no longer a
CB radio.
Freebanders and amp-junkies are nothing more than unlicensed pirates
that are trying to hide behind the no-license status of CB radio, and
have absolutely nothing in common with proper and legal CB radio. They
are off-topic.
I suggest YOU learn the proper posting ettiquitte.
I suggest YOU learn some qualitative reasoning skills.

"You are arguing your case where it will do no good. You need to learn
how to channel your anger and direct your efforts somewhere it matters."

... is not his real name but a hypocrite by nature...

: "Certainly the majority in rrcb believe FCC
: laws are meant to be broken."

Your poor asumption only. You assume to much as always... I don't recall ever reading the results of any poll you've taken, or ever seeing your basis for such a statement. Talk is cheap and you spend a lot saying nothing but generalized statements without supporting evidence.

: But ask the same question to a ham
: newsgroup and you'll get the opposite reaction.

same thing applies here... your blowing it out your backside again.

: Or try putting the
: question to a neutral group, say people on the street. Ask them if
: they believe CB radio operators should obey FCC laws or not.

Doesn't support your statement... almost a troll question.

: I doubt
: you could find a majority to agree with your point of view. So you are
: trying to convince us that since your small minority feels that "the
: law is meant to be broken" there should be no further discussion on
: the matter.

Above you write the majority in rrcb, now you follow up with "small minority." Talk about contrary statements. Get it right Dwight and stop chasing windmills. Try using your real name and explain to us why your current news group statements make you a hypocrite. I've heard you've sold CB amplifiers in the past. Care to dispute that statement..? Shall we bring more out of your closet..? ... let's see now... what do we have here...? Oh my..!

: I disagree.
: -Aaron-

I'll be looking for your reply... don't forget to use your real name Dwight.

WELL....JUST BECAUSE ITS A LAW 'ON THE BOOKS" DOESNT MEAN IT SHOULD ALWAYS BE OBEYED.I REMEMBER NOT TO LONG AGO,"LAWS" THAT WERE ON THE BOOKS THAT DIDNT ALLOW PEOPLE OF COLOR TO EAT IN CERTAIN RESTAURANTS,DRINK FROM PUBLIC FOUNTAINS,USE PUBLIC RESTROOMS ETC.ETC.THESE WERE THE "LAW OF THE LAND" THINK WE SHOULD HAVE "BLINDLY" OBEYED THOSE.????? WHAT ABOUT LAWS THAT ARE STILL ON THE BOOKS THAT TRY TO TELL YOU AND YOUR LOVED ONE WHAT YOU CAN AND CANT DO...IN YOUR OWN BED-ROOM????YOU GONNA LET SOME GEEKY ASS-HOLE WITH A HANG-UP TELL YOU WHAT TO DO??? DONT THINK SO.....AND WHAT ABOUT THE CONCEPT OF 'GENERAL ACCEPTANCE" IF A LAW BECOMES NO LONGER OBEYED(AS IT IS REGARDING FREE-BANDING) MABEY ITS BECOME AN ANTIQUATED LAW NEEDING RE-VISION OR RE-MOVAL. HEY....ITS JUST A THOUGHT.:) :) ELPASOGUNSLINGER

Sparky lead with:
The segregation laws were violations of basic civil rights, which is not the case with freebanding. Also, the civil rights movement resulted in widespread and sweeping reform, including at least one Constitutional amendment. The movement was based upon morality,

"The same personal type morality you are attempting to foster on others who want no part of it."

human dignity, and the unconstitutional nature of those laws. This is HARDLY the case where CB radio is concerned.

"Says YOU."

Outdated and obsolete laws are commonly called 'blue laws', and are ignored by the public and law enforcement until the time that they are repealed.

"Or deemed necessary and enforced."

As stated before, Part 95 is neither outdated nor obsolete - it is obeyed by the majority of the general public,

"The majority of the general public have no connection with part 95 in the context you present. If you mean cbers, this is in direct conflict with your past claims concerning the majority of cbers."

and is enforced (although not very well) by the FCC. Part 95 is not a 'blue law'.
Your concept of "general acceptance" is more widely referred to as 'de facto'.

"And your concept of the "general public" is skewered, as I have demonstrated."

It is -extremely- unlikely that restrictions on the use of the radio spectrum will be eased,

"Nor increased, especially in the dead zone we are, for all pertinent points, referring to."

de facto or de jure, because of the highly limited nature of the resource. As the demands on the ether increase, so will the restrictions placed upon it. It is more likely that a band that is as heavily abused as the Citizen's Band

"There it is. Complete contradiction with what you appear to be saying above."

will be removed from service rather than the restrictions relaxed. This is made even more likely because of the existance of many other legal alternatives to CB radio.

"Substitute the word "ham" for cb and the statement is just as valid. The world at large could give a rat's behind concerning anything to do with ham or cb radio when taken in the grander scheme of things. At a time when that service needs all the help it can get from the public, there will always be boils like you that will be around to make both services look like hell."

Lack of enforcement may well be an indication that the band privileges are about to be revoked.

"Good deal. Then it will get even quieter and the skip will be even better."

A current example of this can be seen in the controversy regarding the new low-power FM stations.

"That's a lousy example, as both services were established for totally opposite objectives."

It was suggested by a coalition of broadcasting stations that allowing a LPFM service would increase the number of illegal broadcasters. This speculation became fact even before all available licenses were issued, and the abuse of the FM broadcast band is now a critical issue with the FCC.
Finally, "just because a law is 'on the books' doesn't mean it should always be obeyed" is an ad hoc argument at best. If a law is found to be unconstitutional, or not in the interests of the general public, there are legal methods by which that law can be changed or repealed. This can be done in any of the three branches of government. But no government is going to change or repeal a law just because a few spoiled individuals don't like

"If it was just a few, you wouldn't have such a hard on for it."

Tell us exactly what rules you would abolish, what frequencies you would
open up for "freebanders", and why.

I wouldn't change a thing, except maybe the DX rule. I like it the way
it is.

"You have almost taken on a proper demeanor the last few days, so I will
take this opportunity to respond in kind."

You mean you like it illegal. Funny, that's what I hear from a lot of
hard core 'freebanders'. The worst thing that could happen is for the
freeband to be legalized.

"By Jove, I do believe you may be on to a worldwide conspiracy here."

If the freeband were legalized, they'd have to contend with millions of
new users flooding their (formerly stolen) turf. Pretty soon the
"freeband" would sound like the lower 40. So they'd rather keep it
illegal -- and keep trespassing.

"The word trespass has never been used by the FCC to describe the acts
you atrribute to the term. Perhaps a new innuendo, one that actually has
merit and relation to the matter at hand, would gain your campaign
credibility."

I'm still waiting for you to cite some case law to support your side of
the fence on the issues Twisted.

"The fact that none exist support perfectly my contentions."

Actually mine, and others here who share the same view. So you're
perfectly happy that you can't even find any case law to support your
own silly arguments!

"The arguments aren't mine. They are yours, and whoever wants to be
associated with your views."

I figured I'd give you an honest chance to find something to support
your view point.

"My opinion needs no validation, unlike yours."

Instead you seem to rather like squandering it with flippant remarks,
and wasting your time digging through old Usenet archives for other
people's messages to resurrect. So now it's just fine to repeatedly
remind you, and everyone else on the group, that not only are your
arguments illogical,

"What arguments? The empty and unfounded accusations you throw around
daily?"

they also do not enjoy the status of a valid legal theory to use as
self-defense in a court of law, when pursued by the FCC for Part 95
violations.

"Still waiting for you to support a single instance where a DXer was
busted for simply talking DX or freebanding. You could even include a
link where someone was busted persuant to part 95 for merely poting
their opinions and thoughts on usenet. Hahaha! You're still a member of
the Dream Police."

Nobody said that. Your going the route of the extremist now.

I just simply stated that recreational (rec) use of CB radio is
on topic here. Your ranting about how it is illegal isn't as
much on topic as something that is.

>
> > Radio, meaning it has to do with radio.
>
> I am sure the rest of the NG readers appreciate you educating them that

Yes Dwight. At least I don't hide behind alter-egos, and have multiple
posting accounts to agree with myself.

>
>
> > CB meaning any and all topics related directly or indirectly to CB.
>
> LOL, So the rules and regulation directly related to CB are good then
Right?

As long as people aren't flamed for talking about said recreational
purposes, no they
aren't.

However, your posts go farther than educating people (Lord knows you have
spewed
enough drivel to do that), and go to the point of fanaticism, flaming, etc.

> anything to be discussed here, which defeats the purpose of topic
> related newsgroups.

If it defeats the purpose, then why bring it up?

Their is a reason their ARE topics on UseNET.

>
> Illegal operators use frequencies outside the Citizen's Band, and are
> therefore off-topic. They use higher power than specified, so they are
> off-topic.

Not really, since most of the people doing so either:

A. Do it recreationally
B. Ask for recreational use
C. Want to explore the possibility of using their radio in a recreational
manner.

I have already demonstrated how IOs have more in common
> with hams than CBers, the only difference there being a license. But
> the IOs hang out in the CB newsgroup, for whatever reason. But it isn't

> vehicles laws are on topic in auto.speeding.ticket.

Not really. If someone asks about them, then yes, it is on topic.

If someone posts something for sale, it isn't topically correct for
cop Dwight / Aaron Voobner, etc. to tell them it is illegal.

That would be more inclined to be used via email.

Otherwise, it is off topic. I suggest you get a FAQ on UseNET and
peruse it, since your the one that believes everyone should follow rules
to the T.

Thats your first mistake
> suggesting what anyone should do. I suggest you get your eyes checked.

lol.

OK Dwight.

Kenneth,
The problem with export radios is they are perfectly legal for Hams to
own and operate on the Ham bands. I don't think it's really a money
issue....

Just as fanatical as the AKC's are in rules posting.

> > That I promote running clean power?

Your gonna tell me you promote clean power, what was the spectral purity of the 45,000 watt signal? Did you tell him he is introducing harmonics to the band of course you didn't. Thats like me saying If your gonna speed, Please be careful not to hurt anyone. Does that make it Right?

> 25 kw slug for use on CB.

Nobody NEEDS any meter, or any radio for that matter. Nobody buys CB
equipment out of need, but out of desire.

I can see perfectly good, legal reasons for WANTING a meter that happens to
read far more power than CB allows.

1. The meter may also be used for Amateur use.
2. The meter may also be for professional testing on a dummy load.
3. The meter may have functions not found on cheap low power meters.
4. The meter may be considered one of the most accurate.
5. The user may just wish to boast about his "s**t hot" meter.
6. The user may actually be fooled by bigger figures.
7. Pure recreation ;~)

Other people may be able to add to that list.

> When 4 watts wouldnt make the meter move with any of them.

Do they not have plenty of power ranges, my small 1000 Watt meter has.

> Buster no one has said this at all, they questioned why a cber would need a
> meter that reads that high.

Who cares, I would just like to know why women have their breasts enlarged to
sizes that are far too big for a mans hands.
And why that woman on "Total Recall" needed three of them, when men have just
two hands.... But then I wouldn't complain.

Regards,

Brainbuster.

There was a little boy who was curious about what a strip club was like.
So one day he decided to sneak into one. Once he was in, he watched
as the strippers danced until they started taking off their clothing.

That's when he jumped from his hiding place, bolted out the door, and started
running down the street screaming and yelling where he runs into a man.

The man asks the boy, "What's wrong you young man?
You look like you just saw a ghost!"

The little boy replies, GHOST... it's worse than that mister!"
"My mommy told me that if I ever watched a girl undress before I got married,
I would slowly turn to stone... and then all of a sudden...

3792. Re: on the legality of "free-banding" issue , and the "bigger picture"

Newsgroup: rec.radio.cb
Date: 2001-10-31 22:16:17 UTC
From: voobner@yahoo.com
Message-ID: <fbc7a2.0110311416.ff110da@posting.google.com>
Source record: 102704

This is a list taken from the FCC's wireless telecommunication database of all site licensees using frequencies from 26.000 to 28.000 MHz - the so-called 'freeband'. It clearly shows that these freqs are not unused or abandoned. Every callsign can be looked up and verified. Some sites use more two or more frequencies. Frequencies within the Citizens Band were excluded from the list.

Hey Ham traitor, I think I will drop a dime to raytheon about you
advertising equipment that is ILLEGAL to use on CB radios in this NG
on company time.
Enjoy your barbecue, I WILL!
HARDEEHARRHARRRHARRRR!!! LIFE IS GOOD WHEN YOU AINT A HAM TRAITOR!

PART TWO OF a list taken from the FCC's wireless telecommunication database of all site licensees using frequencies from 26.000 to 28.000 MHz - the so-called 'freeband'. It clearly shows that these freqs are not unused or abandoned. Every callsign can be looked up and verified. Some sites use more two or more frequencies. Frequencies within the Citizens Band were excluded from the list.

Thanks. You are correct. That's what I get for posting at 1:30 AM in the morning. On the other hand if he could find a way to fit the 18 ft long folded dipole, and by varying the spacing between each side allows a means to adjust the match which you can't do easly with just a simple dipole.

OK Skipp, you turdpile...Prove that the receiver and the transmitter
of a crystal mixer type CB can be easily split up from the
transmitter. No way.
And I am SURE that people would invest the time, parts, effort, etc to
LISTEN.

As far as using a real name goes, you say that then post with a name a
12 year old would use. HAW HAW.

Change your name to Neal, and Bob for the middle name, after what you
do all the time.

> actually, a folded dipole isn't the same as a shortened one, Leland...

Actually I was thinking of something else. What I was referring to as a folded dipole is a long very narrow loop fed at the center on one side. I just missed on the length it should have been a 1/2 wave, 18 feet, not the 1/4 wave length I mentioned before. Richard noticed the error.

For no ground radials he could also try a version of a "Sleeve Dipole" built for 11m. This is also a 1/2 wave antenna that does not need a ground plane either. All he would need is basically just coax cable. You cut off the outer jacket for about 108 inches exposing the conductive braided shield. Then take the braided shield and push it back over the coax jacket back along the length of the cable towards the radio end. Make sure to stretch it out so it is about the same length as before. Now just hang the cable up, in a vertical direction, by the end of the inner conductor using a non conductive support. Check the SWR. If it's too far off then trim back a bit off the end of the inner conductor. Also adjust the length of the braid to match by either trimming some off the end, or sliding it up to shorten the length. Once he has a good match tape the braided shield in place, and apply some sealant to the section where the braid and inner conductor separate to keep water out of the coax. Simple and cheap.

Since for reasons of national security our government is not disclosing in detail it's efforts to locate and identify Terrorists so you, nor the general public, has any idea one way or the other how large, or small, the FCC's participation is in the overall effort to locate them. However it does seem very foolish to ignore the FCC's monitoring resources, and it would be a safe bet that their effort is more than simply "self-imposed and secondary in nature" to other agencies, civilian or military.

> enlighten us."

It's no big secret that the money for many so-called "black projects" are hidden inside of the budget of other public projects. It's even been mention as such in the public press from time to time. Even many of the congress don't know where the money goes. Considering the current state of affairs, and the need for more security, it's not unreasonable to assume, or at the very least suspect, money is being send to the FCC to specifically fund the need for extra equipment and field agents.

Give it a rest, twist. How many people have been hanged or lynched
for freebanding? Are they forced to use seperate public facilities?
Do they make you sit in the back of the bus on your way to lockdown?
Have you been denied jobs because you were a freebander? Do people
see your antenna and call you 'nigger'? Save the 'poor little persecuted
freebander' crap for the FCC hearing, cuz it don't wash here.

>Does anyone own this radio? I am looking for comments good or bad.

I had one about ten years or so ago. It's a fairly decent rig if a competent tech gives it the once over. Out of the box performance is questionable due to Ranger's equally questionable quality control practices at the time of manufacture. It uses the EPT3600 series board, which is an early attempt at cloning Uniden's board.

Do yourself a favor and get a Grant XL. The "build quality" is far higher and a really hot performer. Should you decide to stick with the 3900, have a tech go over it, DON'T remove the audio limiter, and don't try to wring every last ounce of power out of it. Good luck to you in either case.

> > related newsgroups.
>
> If it defeats the purpose, then why bring it up?

Bring what up? You brought up the topic about indirect topics. By
your interpretation (of a system that works everywhere else but here)
legallities are indirectly related to CB radio, so they are on-topic.
Quit yer bitchin.

> > Illegal operators use frequencies outside the Citizen's Band, and are
> > therefore off-topic. They use higher power than specified, so they are
> > off-topic.
>
>
> Not really, since most of the people doing so either:

A. Do it illegally
B. Ask for help to operate illegally
C. Want to explore the possibility of using their radio in an illegal
manner.

Toll, you can keep calling it CB all day, but that won't make it CB
any more than if I keep telling myself that someday you will figure
this out for yourself. Try, Toll, please try to dust the cobwebs off
that grey matter and think about what you are saying. And at the same
time, please try to learn the difference between 'there' and 'their'.

>"My opinion needs no validation, unlike yours."

Unfortunately they do. That's why you are the official CB news group
"punch clown". You shoot off at mouth, then you can't even coherently defend your point of view. In a different vein it's called a case of the "emperor has no cloths". You may feel you make sense, the rest of us can't make sense out of you rants. You like to squander an oppternity to clarifiy yourselve. Instead you post flippant remarks,
and wast your time digging through old Usenet archives for other
people's messages to resurrect, to deflect attention away from the fact you have no debating skills what so ever, and facts to back up your flippant comments as well.

>"What arguments?

Freebanding doesn't hurt anybody so it's OK to do since the frequencies are not used. Or a very close version of the same.

>The empty and unfounded accusations you throw around daily?"

You honed that to a fine art, and practice at it daily. That's been the principle reason for your current status as a "punch clown" on the group.

>"Still waiting for you to support a single instance where a DXer was
>busted for simply talking DX or freebanding.

Well just hop over to the "rec.amateur.policy" news group, and leave a message for "Phil Kane (K2ASP)". He worked for the FCC, and did his share of FCC busts for Part 95 violations. Since his departure from the FCC he now does legal consulting work on communication issues for his clients from my understanding. One case, which he did mention, when he was at the FCC, in that group some months back, was busting a CBer for simply talking "skip" out of California to another state . You can get all the sorry examples you want, which blow holes in your arguments, and get it straight from the horse's mouth too. All you have to do is screw up a bit of courage to go ask "the man". I'm not your mother Twisted, so there are a few things, as an adult, you'll have to do for yourself.

This is how this group of people operates, sounds just like the group of Cbers in my area. Someone throws a carrier and of course they all think they know who it is, you hear them saying Hey thats that damn Black Squirrel dumping those deadkeys, 2 days later they are blaming Red Foxx. After a weeks time they have named everyone who they don't like as the carrier thrower. While the real culprits sit and laugh at them. What else do you expect from a bunch of illegal Cbers anyhow.

Bert exactly how many watts should his tech wring out of this radio? Don't
forget anything over 4 watts is illegal.

Actually, the instructions state that you are to remove either the TX enable
wire from
the mic socket, or cut the trace going to the TX/RX relay in radios so
equipped.

I have a manual here for the original RDS-1 and for the Redco Digi-Scan 5
that
both state this.

And they provide instructions for newer radios to do same.

Buster you had better be careful, Troll Free would consider this off topic
in this Ng. It is not CB related. Just didn't want you to get on thier bad
side.
Remember a swr of 1:1.5 is acceptable in most cases.

Perhaps twistie needs to give you a class on header reading Mophed. Don't
forget to turn your Cb's off when entering a tunnel.

OK,

If I am talking within the legal 40 channels, and using a linear, how is
that
NOT CB radio?

Try, Toll, please try to dust the cobwebs off
> that grey matter and think about what you are saying. And at the same
> time, please try to learn the difference between 'there' and 'their'.

You get my point regardless.

Since it was A0, I would assume fairly clean. However, since I didn't build
the amp,
test the amp in a lab environment, and didn't have a receiver tuned
somewhere near
that wasn't having severe front end overload, I can't realistically comment
on it.

However, I know who designed it, and I do know who built it, and they are
notorious
for build / designing clean equipment.

Did you tell him he is introducing harmonics to the
> band of course you didn't.

Why would I states omething to him that I didn't know as fact?

That's more along the lines of you, Dwight.

WELL....JUST BECAUSE ITS A LAW 'ON THE BOOKS" DOESNT MEAN IT SHOULD
ALWAYS BE OBEYED.I REMEMBER NOT TO LONG AGO,"LAWS" THAT WERE ON THE
BOOKS THAT DIDNT ALLOW PEOPLE OF COLOR TO EAT IN CERTAIN
RESTAURANTS,DRINK FROM PUBLIC FOUNTAINS,USE PUBLIC RESTROOMS
ETC.ETC.THESE WERE THE "LAW OF THE LAND" THINK WE SHOULD HAVE "BLINDLY"
OBEYED THOSE.????? WHAT ABOUT LAWS THAT ARE STILL ON THE BOOKS THAT TRY
TO TELL YOU AND YOUR LOVED ONE WHAT YOU CAN AND CANT DO...IN YOUR OWN
BED-ROOM????YOU GONNA LET SOME GEEKY ASS-HOLE WITH A HANG-UP TELL YOU
WHAT TO DO??? DONT THINK SO.....AND WHAT ABOUT THE CONCEPT OF 'GENERAL
ACCEPTANCE" IF A LAW BECOMES NO LONGER OBEYED(AS IT IS REGARDING
FREE-BANDING) MABEY ITS BECOME AN ANTIQUATED LAW NEEDING RE-VISION OR
RE-MOVAL. HEY....ITS JUST A THOUGHT.:) :) ELPASOGUNSLINGER

Sparky lead with:
The segregation laws were violations of basic civil rights, which is not
the case with freebanding. Also, the civil rights movement resulted in
widespread and sweeping reform, including at least one Constitutional
amendment. The movement was based upon morality,

"The same personal type morality you are attempting to foster on others
who want no part of it."

human dignity, and the unconstitutional nature of those laws. This is
HARDLY the case where CB radio is concerned.

"Says YOU."

Give it a rest, twist.

"I humbly suggest you engage and exercise your option to not reply, or
visit another site, as you continue to feel compelled to tell others
what to discuss. That doesn't wash here."

How many people have been hanged or lynched for freebanding? Are they
forced to use seperate public facilities? Do they make you sit in the
back of the bus on your way to lockdown? Have you been denied jobs
because you were a freebander? Do people see your antenna and call you
'nigger'? Save the 'poor little persecuted freebander' crap for the FCC
hearing, cuz it don't wash here.

"What hearing would that be, Sparky? And why would the FCC be concerned with terrrorists? Still, how could one possibly be summoned to an FCC hearing for posting opinions on usenet?"

As stated before, Part 95 is neither outdated nor obsolete - it is obeyed by the majority of the general public,

"The majority of the general public have no connection with part 95 in the context you present.

Bullshit, twisto, Part 95 applies to everyone, whether they use a CB radio or not.

"How the hell does a law or rule pertain to someone if they have no involvement with anything it covers? Does an emissions test apply to a vehicleless individual?"

Your concept of "general acceptance" is more widely referred to as 'de facto'.

"And your concept of the "general public" is skewered, as I have demonstrated."

It is -extremely- unlikely that restrictions on the use of the radio spectrum will be eased,

"Nor increased, especially in the dead zone we are, for all pertinent points, referring to."

de facto or de jure, because of the highly limited nature of the resource. As the demands on the ether increase, so will the restrictions placed upon it. It is more likely that a band that is as heavily abused as the Citizen's Band

"There it is. Complete contradiction with what you appear to be saying above."

It's a contradiction to what YOU said above, twist,

"Of course it is, which is why I tear it apart. Nevertheless, it is self-contradictory to what you profess. Your post disagreeing with yourself is much more entertaining than you disagreeing with anyone else."

you can't even separate your words from mine.
"Sure I can. You are backed in another corner, as you were with the ridiculous but entertaining quip concerning stepped up enforcement by the FCC with an imaginary influx of cash for field agents to bust me skip talking on 555 and to monitor for terrorists, so you do what you always do, back pedal and obfuscate."

Nothing else you posted is worth a response, as usual, but I am impressed that you could actually make two good points this month!

"Of course you are impressed....we all impress you, which is why you join us in a daily celebration of good times and feelgood cb

discussions, despite our failed attempts at censorship."

Good work, twist, the therapy must be paying off!

"I guess it is if it is able to get you through an entire post without hurling a single insult...you almost made it, but you couldn't help yourself. My advice, stick with it, you're making slight progress."

Why don't you think so? They have seen what is posted here first hand, and from the same people who have lodged complaints against me. They laughed at twistie claiming i infringed on some copyrighted material of his, when he could provide no proof of any of his claims ask him to post the e-mail they sent back to him. BTW, what rules am i breaking? The abuse team manager was an ex-Cber, he understands why the Keyclowns want to silence those that are legal operators. Is it ok for you and the others to break these same rules. You just need to know how far you can take em. You think you have ahh what the hell is the guys name who runs your news service in your back pocket, hell bypass him and go straight to your isp as well. But, That is the pussy way out complaining to ISP's, trying to silence the critics. either take it like a man or go lay down in the corner if you cannot hang or don't reply at all. Remember If you ask some in this NG I have 3 or 4 different ISP's right? But yet the only complaints I get are to @home. Have a good nite.

"The FCC is going to monitoring for terrorists? Where the hell did you
get that? The FCC is not military and any monitoring they may or may not
elect to do will be self-imposed and secondary in nature and not any
real significance to the military."
--
KC8LDO interjected with:
Since for reasons of national security our government is not disclosing
in detail it's efforts to locate and identify Terrorist
so you, nor the general public, has any idea one way or the other how
large, or small, the FCC's participation is in the overall effort to
locate them.

"Um, it was directed at it's origin, but since you are feeling froggy
(shoulda known by the Dweebo posts), this is what I have maintained all
along. Glad to see you also realize that Sparky is peddling BS, since,
as you said, the general public has no idea. Seems like Sparky is
insinuating he is something other than the general public. He wasn't
military...he DID say RF pirates affected him in his work, but refused
to say how..hmmm..a regular 007.....(chuckle).

But even that is BS. The media is keeping us detailed now down to the
exact number of sortees carried out, a call for scientists to grow
smallpox for the military, what the center for disease control is
planning, etc. Biological concerns are much more sensitive than radio
signals, so to think that an imaginary cloak is to be thrown over the
FCC's involvement in chasing down terrorists so the public is not aware,
even for a second, is nothing short of hysterical entertainment and fits
right there with all the rest of the imaginary but positive thoughts you
ply."

However it does seem very foolish to ignore the FCC's monitoring
resources, and it would be a safe bet that their effort is more than
simply "self-imposed and secondary in nature" to other agencies,
civilian or military.

"Maybe, maybe not. Let's suppose for a second, that the FCC were called
on to (ahem) assist in monitoring for terrorist activity. Do you still
think Bin Laden is going to be transmitting on 555 and that the feds
will be listening for him there?"

we can expect an increase in enforcement worldwide. After the terrorist
threat has been 'removed', don't expect the FCC to slack up on the
enforcement issue again.

"You said it yourself, the funds aren't there, so where is this imagined stepped-up enforcement going to originate? Did your "inside information" allow you knowledge of a sudden allocation of funds to be directed to the FCC other than through Congressional allotments? Feel free to enlighten us."

It's no big secret that the money for many so-called "black projects" are hidden inside of the budget of other public projects.

"Aha. This is true and I agree wholeheartedly. However, I don't see anyone at all in Washington willing to risk such an illegal endeavor (like the contras were funded) to chase the freebanding cbers. Matter of fact, I can't see anyone taking money from a pork project to be used for policing the airway from 25 to 27.999. Can you say otherise and still maintain a straightface?"

It's even been mention as such in the public press from time to time. Even many of the congress don't know where the money goes. Considering the current state of affairs, and the need for more security, it's not unreasonable to assume, or at the very least suspect, money is being send to the FCC to specifically fund the need for extra equipment and field agents.

Buster, this is not your average Joe CB meter. the meter and line section are $350+ and then you need to buy "slugs" for the different power ranges which as you see are somewhat expensive. A 25 kw slug is not the slug of choice for a CB operator it will not move the meter with a 4 watt signal let alone 100 watts. With a 25kw slug the first line on the meter represents 500 watts,

    news:<ttuj5aq9go4bb7@corp.supernews.com>...
There are over 48,000 newsgroups and thousands of other forums.
If they want to exercise their rights they can go to alt.freespeech and
discuss their amps. They might even become the majority there. Does that
mean their discussions are appropriate? No, because that's not what that
newsgroup is intended to discuss. Nor is this one.
Use of CB radio, with or without amplifiers, is appropriate for
    discussion
on rec.radio.cb

Sparky redundantly regurgitated:
How so? How do amplifiers fit within the definition of CB radio?

They are used.

Then it's not CB anymore. It's real simple, Toll, but maybe that's the
problem.

"So what is my Cobra if I hook it up to an amp? It's still a cb, only
now it's pissing you off, so you call it something else. LMAO!"

"My opinion needs no validation, unlike yours."

Unfortunately they do.

"Mistaken again."

That's why you are the official CB news group "punch clown". You shoot
off at mouth, then you can't even coherently defend your point of view.
In a different vein it's called a case of the "emperor has no cloths".
You may feel you make sense, the rest of us can't make sense out of you
rants.

"The ones you refer to when you collectively use the term "us" matter
not at all."

You like to squander an oppternity to clarifiy yourselve. Instead you
post flippant remarks, and wast your time digging through old Usenet
archives for other people's messages to resurrect, to deflect attention
away from the fact you have no debating skills what so ever, and facts
to back up your flippant comments as well.

"What arguments?

Freebanding doesn't hurt anybody so it's OK to do since the frequencies
are not used. Or a very close version of the same.

"Well, get it right, Lelnad, but then again, comprehension seems to
elude you."

The empty and unfounded accusations you throw around daily?"

You honed that to a fine art, and practice at it daily. That's been the
principle reason for your current status as a "punch clown" on the
group.

"Still waiting for you to support a single instance where a DXer was
busted for simply talking DX or freebanding.

Well just hop over to the "rec.amateur.policy" news group, and leave a
message for "Phil Kane (K2ASP)".

"You have been begging me to come to the hammie forum for so long that you don't know even enough to be embarassed. YOU ask Phil. I am not the one in doubt, nor the slightest bit concerned of my activities on the air. I know my transmissions bother no one. It is you and your party, yes your party that AA has so many times included you in, that has the arguments for how others operate, not vice-versa."

He worked for the FCC, and did his share of FCC busts for Part 95 violations. Since his departure from the FCC he now does legal consulting work on communication issues for his clients from my understanding. One case, which he did mention, when he was at the FCC, in that group some months back, was busting a CBer for simply talking "skip" out of California to another state . You can get all the sorry examples you want, which blow holes in your arguments, and get it straight from the horse's mouth too. All you have to do is screw up a bit of courage to go ask "the man".

"Hehehe..YOU ask him. I'm not the one claiming a skip talker was busted, you are."

I'm not your mother Twisted,

"Is that why you are so angry?"

so there are a few things, as an adult, you'll have to do for yourself.

"However you may have arrived at your grandiose conclusion is irrelevant, but nothing you say, must I ever do."

I don't think so.
--
-Moparholic

Why don't you think so? They have seen what is posted here first hand, and from the same people who have lodged complaints against me. They laughed at twistie claiming i infringed on some copyrighted material of his, when he could provide no proof of any of his claims ask him to post the e-mail they sent back to him.

"They didn't send one back, better check your source, cause you are dead wrong or deliberately lying. But they sure warned you, cause you haven't repeated your copyright boo-boo and fraudulent post since. That was my goal. Mission accomplished."

BTW, what rules am i breaking? The abuse team manager was an ex-Cber, he understands why the Keyclowns want to silence those that are legal operators. Is it ok for you and the others to break these same rules. You just need to know how far you can take em. You think you have ahh what the hell is the guys name who runs your news service in your back pocket, hell bypass him and go straight to your isp as well. But, That is the pussy way out complaining to ISP's, trying to silence the critics.

"Why not look back and see who began this tactic, since you obviously are attempting to blame it on those you disagree with?"

Youeither take it like a man or go lay down in the corner if you cannot hang or don't reply at all.

"Nah, they can take it like you do, a whupped dog that only gets attention when we allow."

Remember If you ask some in this NG I have 3 or 4 different ISP's right? But yet the only complaints I get are to @home. Have a good nite.

"And that was all I needed. Now go back to flapping your arms, son, you bore me."

I don't think Aaron qualifies. By and large the hobby is self-policing but
that tends to require some inclination to want to fly straight and level.
Which is why we raised enough stink to get one Riley Hollingsworth appointed
as Special Counsel for Amateur Radio. He can reach out and administer a
beating from his desk.

You want to buy the newspaper, perhaps. Aaron sure as hell ain't worth MY
50 cents.

3850. Mobile Amps

Newsgroup: rec.radio.cb
Date: 2001-11-01 02:20:59 UTC

Haven't been on this newsgroup for some time and need some help. I have a Grant XL & Galaxy 225, running through a Wilson 1000 Mag Mount. It all seems to work very well. A friend has asked me to help him get an amp. I seem to remember that the PAL and Galaxy 225 is really the same amp. Is this true and where is a good location to get one? I think that I ordered from a guy named Steve in Louisiana but forgot the name of his company.

Is there any info available about the true output of the various amp? My Galaxy puts out about 180 if I remember. Is this about right and what would the 250 gain?

Thanks in advance for the help.

Source record: 102863

>Bert exactly how many watts should his tech wring out of this radio? Don't
>forget anything over 4 watts is illegal.

Well, let's suppose he does not take my first suggestion and shuns the <legal>
Grant XL. He buys the 3900, keeps the limiter in, and runs it at about 15 or so
"clean" watts. Unless the FCC performs one of their "frequent" freeband sweeps,
(Yes, I AM being sarcastic!) neither you nor I will ever know he's operating at
a whopping 3 watts above the legal limit. (The 3900 will do about 5 or 6 watts
on AM.)

Now let's take a different scenario. One where you answer him with a repetitive
Part 95 quote, or that "friendly reminder" gem you're so fond of, or perhaps we
can even call him a potential "federal felon?" The response could possibly be
"f**k you Voobner" (That's never happened before on this NG, has it?) and he
then buys the rig "peaked and clipped." Now he's running with audio that looks
like the shape of a conning tower of a nuclear sub on an oscilloscope at full
throttle, about 25 watts for the EPT3600 with a single 2SC1969 final.

I appreciate your position, Aaron...I really do. This is just a "friendly
reminder" of the real world. I have a 50/50 shot at steering him to th Uniden.
In ther event that fails, I can at least show him that my concern is genuine
and offer him some "friendly" advice on how to run "clean." You may not
appreciate it, but his neighbors will.

What are your chances, Aaron? I like my odds better. Take care, Aaron.

Twistsie, I was sent a CC of the email that was sent to you. The email stated either to provide proof that the material was copyrighted or provide a link to the copyrighted material and that your other claims against me were bogus and pure bullcrap. So you accomplished nothing If I can find the story you wrote i will post it again. LOL You are a lying sack of shit, and you can't even do that well.

> "Why not look back and see who began this tactic, since you obviously
> are attempting to blame it on those you disagree with?"

So you condone this tactic? And if it fits your agenda you will do it.

I didn't respond because I wasn't involved in this discussion, Toll. As you well know, I don't monitor discussions in this newsgroup unless I'm personally involved in that discussion (which is very rare). However, I received email telling me about this and other similar messages, so I'll respond now.

First of all, I'm not Aaron. Second, I do not post off-topic messages to this newsgroup. Third, I do not, nor have I ever, posted to this newsgroup, or any other newsgroup, using a fake identity. If I have something to say, I will say it using my real name. If it is something that cannot be said using my real name, then I simply will not say it.

I hope this will end the confusion, and the false accusations like the one above.

You can buy universal units or third party replacements at most any CB shop.
If you don't have a local one, try any of the online CB dealers, I'd say
that most if not all carry such items.. To get you started, try Bill's
2-Way, I know he has them... http://www.bills2way.com

The AS Starduster is a textbook example of a 1/4 wave groundplane.

Show it to an antenna engineer, and they will tell you that.

Look it up in a book, and it will as well.

Most technicans use a Bird Wattmeter to measure the transmitted output
power from a linear amplifier.

Some amp makers use two each 60, 80, or 120 watt transistors in their
amps. And they call them amps with different numbers and such. Usually
with numbers that are supposed to mean the output power, but are over
rated.

With 2 each 120 watt transistors, some call it a 350 Gizznostic!

>to say how..hmmm..a regular 007.....(chuckle).

I wouldn't discount what he said. Not everyone is free to discuss everything they do. I've personally have worked with people who many years ago worked on ECM (Electronic Counter Measures) devices and systems while in the military, and still don't want to talk about it even now indetail.

>But even that is BS. The media is keeping us detailed now down to the
>exact number of sortees carried out, a call for scientists to grow
>smallpox for the military, what the center for disease control is
>planning, etc.

You along with others I've spoken to have so quickly forgotten that the US government could be playing the media for dopes by feeding them "miss information" knowing full well how it will get broadcast all over the place. This may as well be part of their war plans. I would not depend on what the media is reporting to much. During the Viet Nam war, from the media reports of government sources, it sounded like we were wining, years later we now know the real truth.

>Biological concerns are much more sensitive than radio
>signals, so to think that an imaginary cloak is to be thrown over the
>FCC's involvement in chasing down terrorists so the public is not aware,
>even for a second, is nothing short of hysterical entertainment and fits

>right there with all the rest of the imaginary but positive thoughts you ply."

Have you ever been to a FCC field office, and REALLY seen the equipment they use 24 x 7 to monitor the air waves? My brother, who is also a Ham, did. He was totally shocked to see the extensive equipment they use, what they can monitor, record, and how often they do it. The term he used to describe their capabilities was "scary".

>"Maybe, maybe not. Let's suppose for a second, that the FCC were called
>on to (ahem) assist in monitoring for terrorist activity. Do you still
>think Bin Laden is going to be transmitting on 555 and that the feds
>will be listening for him there?"

Or any where else for that matter. Picking a mess like the freeband would be an easy way to slip out a shorted coded message that would likely go unnoticed by the usual bands of pirates there. Seems like you never can tell what will pop up there like a week ago where people were treated to a BBC news rebroadcast on 27.555 MHz sideband as a means to jam that frequency.

we can expect an increase in enforcement worldwide. After the terrorist
threat has been 'removed', don't expect the FCC to slack up on the
enforcement issue again.

>"Aha. This is true and I agree wholeheartedly. However, I don't see
>anyone at all in Washington willing to risk such an illegal endeavor
>(like the contras were funded) to chase the freebanding cbers. Matter of
>fact, I can't see anyone taking money from a pork project to be used for
>policing the airway from 25 to 27.999. Can you say otherise and still
>maintain a straightface?"

First of all we're not talking about funding a movement to undermine another country's government. We are talking about an alternate method to fund a perfectly legitimate government agency's budget, and the perfectly legal work it does, in such a way as to not draw any unwanted attention to it. If they, the Terrorists, knew somebody was actively looking they would use some other communication method, and thus it would be that much more work trying to locate them. Since the Terrorists can choose to use any means at their convenience to communicate, including radio with their choice of bands (including the 11m band) etc., it would be totally irresponsible if our government did not consider the possibility, and took appropriate measures accordingly.

Not a bad idea, they're real cheap. Then rent it out to those poor yo-yo's in Detroit, and get rich at their expense. Heck nobody even bothers to fix those places up before they rent them out, and there is never a shortage of people who will rent them no matter what.

Hey twistie, didn't you say you run barefoot (most of the time)? And isn't this site on your side of the pthallic spit? You did see the list, didn't you? With all those sites listed, how can you be sure that you aren't interfering with a properly licensed operator? You can't. And with several of them in the swampland, your barefoot excuse is moot as well.

Maybe you better stick to simpler hobbies, like puppy-beating and shooting college kids.

Message-ID: <7mo2utsip6kfjm8errf10en33q9v7csmvf@4ax.com>
Source record: 102956

Hey folks, friend of mine was having problems with the CB in his car. Seems that every time he turned it on, it'd blow a fuse. Not a good situation, I'm sure you can see that... He said it was working earlier in the day and then all of a sudden, as he was changing the mounting position of the radio, it started blowin fuses...

I said I'd take a look at it (big mistake). Hey, I at least know how to use an ohm meter, he's challenged with the concept of changing a bayonet base bulb...

Anyway, power off, circuit between power lead and ground is open. Good.

Turn power on, and there is a dead (as in not even 1 ohm, I mean DEAD) short to ground...

Things I have checked...

- Opened the radio looked for chaffed wires against the case of the radio. Negative results

- Checked for bare wires against any part of the circuit board. Negative results

- Checked for loose screws, F.O.D. (his comment about working and then not working made me suspect this). Negative results

- Removed all exernally accessable panels, plates, covers, etc., and manipulated them while monitoring for increase in resistance. Negative results

- There WAS a deposit of what might be described as a crystalline residue on the bottom side of the circuit board. It showed no conductivity when probed with the ohmmeter, but nonetheless, I gently scraped it from the board. Negative results.

It's only a CB... To take it into the shop to be repaired would exceed the cost of replacing the radio (it's an old radio, a Radio Shack TRC-428). Figured that before I tossed it into the dead and forgotten bin, someone out there might have an idea... BTW, I loaded him one of my Cobra mobiles, so it IS in my best interest to get some sort of definitive answer... :)

Source record: 102957

Either the final is dead, or the protection diode has blown.

Search around on the board for a diode that's conducting in both directions. When you find it, mark it on the board, find out the part number, buy a new one from Radio Shack, pull the old one (remember which side the stripe is on.. the new diode needs to go in the same way) and replace it. Then tell your buddy to quit hooking the power up backwards.

If you can't find a diode that's "popped" and is conducting in both directions, then the final or the driver is probably blown.. you'll need to replace them both, for safety's sake. Find out which part numbers they are, and replace them with the exact parts.

If THAT's not the problem, you're only out about $5 and an hour or so worth of work... junk the radio.

3896. Re: IS THE FuCC GOD!

Newsgroup: rec.radio.cb
Date: 2001-11-01 15:45:38 UTC
From: Karl Vesterling <kjv@adelphia.net>
Message-ID: <C6eE7.2965$Wd.104763@typhoon1.gnilink.net>
Source record: 102958

Most of them already "think" they live in a police state. I mean, I've come across people who have thought such things illegal as, "farting in church" or taking a whiz outside on your own property. They were never taught that this is a free country, and as long as you're not causing harm to others you're pretty much free to do what you like.

But yeah, things are definitely "ok" when they do them. Buncha whining liberals... Most of them would probably not mid if a law was passed that limited you to only 3 sheets of toilet paper per day in an effort to save the trees.

My question is this, "Why don't they care?"

Simple... If you ask any one of them how many articles there are in the U.S. Constitution most won't know. If you ask how many ammendments there are they won't know either. They'll definitely remember the first ammendment, which according to them let's them submerge religious objects in vats of piss, or go door to door asking for donations to a cause dedicated to keeping the sky from falling which they honestly see as a threat.

Now I live in a town that's primarily republican. And I feel good about that, they stay out of my pockets, and I vote for them. Then more businesses move in. And we're in the top 10 safest towns in the United States (primarily because nothing happens here in Amherst NY ;-) How does this relate to my point? Getting to it.

Three times this year I was interrupted to come to the door and see someone from "Citizens Campaign for the Environment". The first time they were asking for money to lobby a bill about dumping sewage into waterways. Seeing as all sewage is processed, and my friend Frank designs treatment plants I happen to know that an overspill only happens when it rains heavily. And VERY large tanks would be necessary to handle it. But it's diluted so much that it doesn't matter. I say no thanks, and close the door.

Second time (the very next month) they come to my door asking for money to lobby for another such bogus piece of liberal tree hugging crap. No thanks, and I closed the door.

The third time, and again a month later. They come to me while I'm working on m front yard. This time she was cute, and I decided to hear this young woman entirely out. So she goes on about how because of the prevailing westerlies how our exhaust is causing acid rain that's killing wildlife east of us, and how the acid rain is poisoning our water, and killing trees yadda yadda. Ok... Now I've had it.. I had heard it all. I ask, "Have you confirmed any of those statistics with todays figures?" She asks "What do

you mean?" They were using statistics from the mid 1970's to lobby for this bill o' liberal crap. That's what I mean...

She leaves after I insist she get off my property before I let the dog loose. (Who had been barking at the gate the whole time, and he's quite the large black murderous hound one would expect. Loves people... Hates postal workers... ;-)

I get on the horn and dial the local number for the police and explain that it's no emergency, but I'm calling to find out if this group has a permit to solicit in the neighborhood. They send a car out, and the officer talks to this young woman, then comes to me and explains that they do have permits, and he can't do anything.

So I get to thinking... And I say to the officer "She was dropped off in the neighborhood by an old Chevy Suburban that looks like it has a few things wrong with it." The officer looks at me very interested in this new piece of information and asks, "Do you have any idea where it is now?" I go on to explain the color, bondo, and how the doors are rotted out in the bottom. The officer disappears down the road and shows up some time later, rolls down his window and says, "Yup, you were right, it was 2 blocks over. The inspection was a year overdue, a headlight was out, and the exhaust needs to get fixed." I said very loudly, "THANKYOU OFFICER!" as he pulled away.

They haven't been back since...

How does this relate to FCC regulations and freebanding? The FCC doesn't police the CB band anymore unless someone complains about it. Reason? They can't afford to. No budget for it. So the reality of the situation is simply this. If your radio is clean, and doesn't cause TVI, etc... Then noone is going to complain, and hence chances are you won't be caught. But if you do cause harm and discontent chances are you're gonna get nabbed. And for good reason.

It's not, but you Aaron Leland Dweeba guy the other aaron guy all
carry on about how people that run foot warmers, operate out of
band, discuss these things theory or not as federal crimminals.
So this must be a court of law, or at least a law newsgroup.
The point is unless you are a Federal marshal, Federal district
attorney, employee of the FCC or any sort of state employee
with regards to this type of subject, you can only report these
thing to the proper authorities, which none of you are.
Anything else on the rec.radio.cb group is just a troll value.
I'm sure you have been given a ticket or pulled over. Right after
that did you go around taunting motorist that were speeding?
Did you chase after someone for running a stop sign? Not yielding
to someone in a cross walk? leaving their garbage can out to long
after pick up? I mean really, you call the proper officials and let
them do what our tax dollars are paying them for.

I'm sorry sir, I do not see what this has to do with the conversation that Dwight and I were having. You and I guess your twin brother(because you both use the same name) have turned what was a very informative non insulting discussion into your own bashing of other people. I did not start this thread to bash other people, while I disagreed with Dwight concerning some of his views, there was an exchange of information that was done in a very pleasant way.
From what I have read on here in the past month now, it seems as though you, your brother Aaron, Sparky and this Dweeba guy have nothing to offer other than to ridicule, harrass and try to offend people so they won't post here because you don't like there use of the cb. Call them names, publish there names & adress, make comments concerning what you think thier sex habits should be.
As stated in another post, if you feel so strong about legal operations please go out and seek employment @ the FCC, then you can come out here, track all these people down and fine them all you want.
Take this as you see it, I'm sure you will come back with some sort of insult, that seems to be yours and the others MO, but I did not come on here to argue, I enjoy a good discussion, right or wrong.

Dick Nï¿½BK,

Do you happen to know where one might find a history of US amateur
call sign protocol?

Some of my thoughts and questions ...

I know, for example, that at one time a Novice was issued a WN, KN
call which became a W, K, WA, KA, call when upgraded. That stopped
when?

What is the protocol for the N calls? I know that the A's are now
issued to Extra class. Was N ever class-reserved?

I always assumed that the 1x1, 1x2, 1x3 calls were just sequential
progressions, but I have been told that they are class-reserved. Has
it always been that way? Is there any significance other than sequence
for the 2x1 and 2x2's?

Not necessarily looking for the answers, just a resource or two.

Everyone is entitled to there God Given right to free Speech. Think of them as a group of Demonstrators. You may not like what they have to say but they have every right to say what they feel. In this case the AKC are against the illegal usage of the Citizens Band. You must not feel strongly enough to get involved to help better the Citizens Band.

> So this must be a court of law, or at least a law newsgroup.

No it sounds more like an Illegal CB Group if anything.

> The point is unless you are a Federal marshal, Federal district
> attorney, employee of the FCC or any sort of state employee
> with regards to this type of subject, you can only report these
> thing to the proper authorities, which none of you are.

As a citizen of the United States of America, aaron and co have every right to report someone who "openly admits" they are a law breaker and that what they are doing is illegal. it is no different than you standing in the front of your house yelling at a group of teenagers for speeding down the highway, it seems with all the illegal talk perhaps some may have forgotten that what they are doing is illegal. How can you say that they are not reporting any of this to the FCC or other proper authorities? Can you honestly answer that.

> I'm sure you have been given a ticket or pulled over. Right after
> that did you go around taunting motorist that were speeding?
> Did you chase after someone for running a stop sign? Not yielding
> to someone in a cross walk? leaving their garbage can out to long
> after pick up?

Sorry your analogy doesnt make sense. Who was given the ticket out of the AKC group? So this would mean that one of the Akc was busted before by the FCC, now they are going out and playing Joe cop chasing after the illegals? What are you thinking?

>I mean really, you call the proper officials and let
> them do what our tax dollars are paying them for.

> RFA

They very well maybe you have no idea if they are or not. Remember the Guardian Angels in NY.

Hey Mr. K......Are you "dealing" now? Are you selling 'export' radios?
Gosh, did you knw its illegal? Yep, here's a statement by the FCC
about it you may want to read.

The FCC has issued a friendly reminder about those HF transceivers
ostensibly marketed for "amateur" use, but actually designed and
intended specifically for the so-called "freeband" radio operators,
who operate primarily in the 26 to 28 MHz frequency range.
ï¿½
In a May 13 Public Notice, the FCC points out that it's a violation of
FCC regulations to import or market a transmitter designed or intended
to operate outside the amateur bands unless the equipment has been
issued a grant of equipment authorization for the radio services it's
capable of operating. The FCC says it wanted to clarify its rules on
equipment that's "intended to operate in various radio services in the
high frequency radio spectrum, including '10-meter' Amateur Radio
Service (ARS) equipment." The notice--directed to "manufacturers,
importers, vendors and users of these transceivers"--emphasizes that
transmitters intended for use by FCC-authorized radio services except
the Amateur Radio Service must be type-accepted.
ï¿½
In the words of the Public Notice: "The Commission considers that the
transceivers discussed above are intended to be operated on
frequencies where the use of type-accepted equipment is required,
because of the simplicity of modifying them to extend their operating
frequency range."
ï¿½
The FCC also noted that it's illegal to import, market or operate a
transmitter that requires a grant of equipment authorization but for
which no grant has been issued, and that it's a violation to transmit
on frequencies allocated to a licensed radio service "without the
appropriate Commission-issued station license." Violators could be
subject to fines or imprisonment as well as equipment seizure and

forfeiture.--FCC

a stock power mic?

hrm...

At any rate, about your problem, make sure your antenna ground is clean, and try switching hands when you hold the mic... I know that sounds odd, but I had a similar problem with an echo mic about 10 years back, when I still ran that junk. Switching hands stopped the squeal. Might have had something to do with harmonics from the RF coming off the antenna interfering with the circuitry in the mic. It's a possibility, anyway...

If you haven't learned by now, CB radio not only has frequency
limitations, but power and mode limitations as well. Exceed those
limits and it just ain't within the definition of CB. Get it?

There are getting to be a fair number of hams who will not 'talk on the fives' on 10 and 12 meters, largely because of the slims. Any one buying one for the ham bands could very easily find out real quick what being an orphan means.

Without delving into who might want a 10 meter specific rig with decling sunspots or at any time for that matter, might I suggest a TenTec Scout or 516 due out soon. No channelization, no roger beep, and it might survive more than a week in your car in pothole season. And it actually receives - fancy that.

I hate to say it, but "aaronvoobner" (whoever he is) is right. I
agree with Sparky and SSB. Once you put an amp inline or talk outside
the assigned 40, it's not CB anymore.

Sideband has a good response. I'd also have checked the 12 volts with the car running. Bad regulators are not unknown - and excessive voltage can take out a final (I've seen this in UHF business radios). The big reason I mention this is that you said you loaned him a mobile. I'd check the voltage (probably OK, but you never know).

Can you say.....Tram Diamond 10 tuner hooked up to a Titan IIa?
with the development of the 40 channel radio allowed in use as of 1/1/77,
these units were add ons for bringing older radios in line with the new
channel regs allowed......(and then some!)

Everyone here exercises their right to post what they want, including
you. I don't tell anyone they can't post. But I do state my opinions,
which sometimes include hard, cold facts. As you are so estute to
point out, I cannot arrest, indict, try, convict, sentence or punish
anyone for posting on a newsgroup, and I fail to see why you think
I am doing so. I'm just doing what everyone else here does. After all,
isn't that one of the keyclown arguments for freebanding? "Everyone
else does it, so why can't I"? As long as they use it, so will I. And
I will use it legally.

Amazing. First you gripe about people that would call the cops for
a person pissing in their own yard (many cities have sanitary codes
and indecent exposure laws, BTW), and in the next breath you tell a
story of how you sic the cops on someone doing something perfectly
legal but you just don't like what they are doing.

Karl, you are an A-1 hypocrite extrordinaire! Keep up the good work,
you are great asset to the legal CBers!

the other morning i awakened quite early,and as the sun came up,i rushed outside to get in a few minutes constructing the verticle elements for my six element beam......all before i had to head out to work. the air was cool and there i was...happy as a clam....and beginning to think about calling in to work to take a sick day......when i thought..."damn,im addicted to this hobby" i had to chuckle at the thought of a bunch of cb-ers all sitting around in a circle lamenting about the destruction that "the hobby" had wrought in their lives,the lost jobs,the lost wives,the never ending quest/hunger for that next hf rig,or linear amp with just a few more watts in it........any way,i decided that,even if there was a cure....i wouldnt take it. i love it all,the skip,the incessant static that is music to my ears.even the occasional dull witted individuals that one has to tolerate on the band. its all good.......and its all worth while. gentlemen,what would the world be like with out this great hobby? i cant imagine.
good dx-ing!! elpasogunslinger (ps....i finished up the last of the elements,and made it to work....a few minutes late) :)

Thank you for visiting our website. But I, for the life of me, can't understand why YOU would want to visit an organization that 'Promotes illegal radio activity' (your words). Since you visited our site, doesn't that make YOU 'Guilty by association?' I guess the old addage holds true..."If you can't beat 'em...join 'em.' I'll be on the look-out for the Voobner application.

It is, has been and always will be: PEEPEEHOLIC, the Cleveland gutless sissy boy who talked wolf ticket with N8 and then whinily chickened out when told to bring it on.

He is a little pink muffin boy who quakes at the thought of cashing the alligator check his puppy dog ass tried to write. A coward, a sicko, a punk, and a lying low life hunk of maggoty fecal matter.

AKC's it is PEEPEEHOLIC!

A PUBLIC SERVICE MESSAGE FROM THE COMMITTEE FOR BETTER ANTI-KEYCLOWNISM. ALSO BY THE CLEVELAND INTITUTE FOR PINK MUFFIN PUNKBOYS.

Dummies, AKC's don't hate you. We pity your idiocy and laugh at your inadequacies. You are our usetoys. In our eyes you are equivalent to a town slut waiting at a military base back gate after a deployment. That's you sissies exactly.
Ya know how the "sport" of tossing elves into jello filled wading pools was a slight rage a few years back? You guys are the elves as far as the AKC's are concerned. What's even better is we don't have to expend energy tossing. You Keyqueens jump up and run headlong into it.

AKC's are superior beings to you lightloafered federal criminals. The difference is analgous to the difference between pond scum and Albert Einstein, and you dorks aint gettin' any less scummy. But, hey...thanx for all the chuckles when you jum up and whine and talk your feminine drivel.

Come on boy! You can jump up again. I know you can.

If that ain't the truth! He had three (actually FOUR) opportunities
to beat me "like a red headed stepchild" like he said he was going
to do, but he chickened out EVERY TIME! He even offered to pick me
up at the airport, but since he couldn't even find the McDonald's,
I would probably still be waiting for the connecting flight!

It amazes me that he still posts here. Maybe he just hasn't learned
his lesson yet -- he's too yellow to show up for class!

So does reading Lenin make you a communist? Does reading "Mein Kampf"
make you a nazi? Does reading the Bible make you a Christian?

Maybe I posed the wrong question: Does reading Verne's "From the Earth
to the Moon" make you a rocket scientist? No, it doesn't. More lame
keyclown bullshit.

I have an old Wilson (Regency XLH250A) sitting on the shelf in front
of me. The only reason I still have it is because nobody seems to
want it. It works on 135 - 150MHz, and it even scans. So that should
tell you that nobody is really interested in the frequency/band --
the only thing that matters is hiding behind the no-license status
of CB radio.

Don't forget to check the diode -without- the power supply hooked up,
on or off. A good replacement is the 1N4001, 1N4002,... 1N400x. Also
try 1N540x. NEVER use a larger fuse than specified -- the fuse is to
protect the radio, so don't protect the fuse! And DON'T snip the
diode -- desolder it. When one end is removed from the circuit you
can check both the diode and the radio.

Phil doesn't have any 'beans' to spill, and he never did. That's why he resorted to forging emails and identities for the purpose of deception. Dwight has the full story (yeah, Phil, we spotted you on the first email, and your test post in alt.test). He's in REALLY BIG trouble now! Anyone care to join him?

"My opinion
needs no validation, unlike yours."

Unfortunately they do. You managed to fail at a simple assignment that
even a grade school kid couldn't screw up. But you surprised me and
found one.

"Mistaken again."

No.

"Hehehe..YOU ask him. I'm not the one claiming a skip talker was busted,
you are."
Remember this from your last silly post......
??"Still waiting for you to support a single instance where a DXer was
??busted for simply talking DX or freebanding
You asked for the proof so you got "the link" to it -> "Phil Kane
(K2ASP)". Like I said he worked for the FCC and busted CBers for Part 95
violations. Get your proof right from the source. Seems to me you don't
have the balls to even go and ask him.

"Hehehe...seems like it is you that is testicle- free, not I, as you're
attempting to get another person to do your dirty work for you and fight
your imaginary battles. Leave Phil alone and back your own BS. You lose
again, as always."

fgillil@tincan.org (Sparky) wrote in message news:<e182e02.0110310716.4e811088@posting.google.com>... Last time I checked, this was a newsgroup, not a court of law. It's not, but you Aaron Leland Dweeba guy the other aaron guy all carry on about how people that run foot warmers, operate out of band, discuss these things theory or not as federal crimminals. So this must be a court of law, or at least a law newsgroup. The point is unless you are a Federal marshal, Federal district attorney, employee of the FCC or any sort of state employee with regards to this type of subject, you can only report these thing to the proper authorities, which none of you are. Anything else on the rec.radio.cb group is just a troll value. I'm sure you have been given a ticket or pulled over. Right after that did you go around taunting motorist that were speeding? Did you chase after someone for running a stop sign? Not yielding to someone in a cross walk? leaving their garbage can out to long after pick up? I mean really, you call the proper officials and let them do what our tax dollars are paying them for. RFA
--
Sparky related with:
Everyone here exercises their right to post what they want, including you. I don't tell anyone they can't post.

"Because we don't alow you, but you do try."
But I do state my opinions, which sometimes include hard, cold facts.

"Such as attempting to censor speech if you feel it doesn't apply to cb in your eyes."

As you are so astute to point out, I cannot arrest, indict, try, convict, sentence or punish anyone for posting on a newsgroup, and I fail to see why you think I am doing so. I'm just doing what everyone else here does.
After all, isn't that one of the keyclown arguments for freebanding? "

"There is just another reason that you are viewed as an antisocial pariah..your nature is to call names based on someones beliefs and posts. As someone previously pointed out to your not-so-Astute observations, you have absolutely no reason to call anyone illegal based on what they post, yet you repeatedly demonstrate an inability to separate actions from words and opinions."

From: kenneth.vaughan@worldnet.att.net (Kenneth Vaughan)
the other morning i awakened quite early,and as the sun came up,i rushed outside to get in a few minutes constructing the verticle elements for my six element beam......all before i had to head out to work. the air was cool and there i was...happy as a clam....and beginning to think about calling in to work to take a sick day......when i thought..."damn,im addicted to this hobby" i had to chuckle at the thought of a bunch of cb-ers all sitting around in a circle lamenting about the destruction that "the hobby" had wrought in their lives,the lost jobs,the lost wives,the never ending quest/hunger for that next hf rig,or linear amp with just a few more watts in it.....any way,i decided that,even if there was a cure....i wouldnt take it. i love it all,the skip,the incessant static that is music to my ears.even the occasional dull witted individuals that one has to tolerate on the band. its all good.....and its all worth while. gentlemen,what would the world be like with out this great hobby? i cant imagine. good dx-ing!! elpasogunslinger (ps....i finished up the last of the elements,and made it to work....a few minutes late) :)

"Texas been coming in like gangbusters. Congratulations on the beam as I know you will derive much pleasure from it. Point it over to the 'pile..last time we had a hurricane in the Gulf between us, it seemed like we had a telephone connection. Where the hell is hurricane Michele, anyway? I need to check the weather and marine forecast..I have an extremely busy weekend so I should get plenty of radio time. Those storms make for some really ill defined radio conditions. When ya' hear the left coast of the 'pile, send me an email, we'll put the spoke on ya'! Have a great weekend."

Hey Radioguy (another fake name eh..?)
You've got to learn to support your statements with at least a bit of background... so people know what the heck your writing about. As it looks now, your quoting the wrong people and looking quite the fool.

:> OK Skipp, you *&%^# ...Prove that the receiver and the transmitter
:> of a crystal mixer type CB can be easily split up from the
:> transmitter. No way.

First off, you can always tell when someone is treading on thin ice... their language gets really poor. Second, why would I have to prove anything about the ability to split up the transmit/receive sections of a crystal synth (you have your technology labels wrong) CB Radio..? What would that do for your problem..? Third, if you really wanted to talk technical about how to do it, we can easily go over the way to do it, rather than have you look the fool with your hate post on the news group.

:> And I am SURE that people would invest the time, parts, effort, etc to
:> LISTEN.

They do all the time... come out from that rock your under and look at receiver sales in any radio catalog.

:> As far as using a real name goes, you say that then post with a name a
:> 12 year old would use. HAW HAW.

12 to 84, many people use and have the same first name as I do... and it's real off all things. And my Email address is real too... and I notice you seem to be hiding behind an alias, ie fake everything. Talk about a hypocrite.

:> Change your name to Neal, and Bob for the middle name, after what you
:> do all the time.

I'm happy with the real one I have now... what was your real name again..? Care to get out from behind that yahoo acount..?

Another goof ball...

AMATEUR RADIO NEWSLINE(tm) REPORT #1264 – NOV. 2, 2001

==========

A NOTE TO THOSE WHO ONLY “READ” AMATEUR RADIO NEWSLINE(tm)

For those of you who only know of the Amateur Radio Newsline (tm) as a text newsletter we would like to invite you to listen to the audio version. This Amateur Radio Newsline (tm) script is actually written for the “spoken word.” It is recorded each by professional broadcasters and is available for private listening or rebroadcast over your repeater. Three methods of delivery are available: Streaming audio using RealAudio, FTP RealAudio or dial-in telephone. Please visit our website at http://www.arnewsline.org for a list of telephone numbers (you have to pay your own long distance charges) and links to audio servers providing our voice newscast (for free). We think you will find the time you spend listening to be a rewarding experience.

de
The Amateur Radio Newsline(tm) Production Team

==========

Amateur Radio Newsline report number 1264 with a release date of Friday, November 2nd, 2001 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Hand held radios to Antarctica, Georgia to host the 2002 United States Amateur Radio Direction Finding championship games and the F-C-C takes action on illegal C-B radios. These stories are first on Amateur Radio Newsline report number 1264 coming your way right now.

(Billboard Cart Here)

HAM RADIO TECHNOLOGY: IRLP REACHES ANTARCTICA

Imagine picking up your H-T, calling your friend and asking him how the weather is. He responds with a crisp clear signal and tells you that its 70 below Zero and snowing. Outside your window the thermometer says its 80 and you plan a day at the beach. Welcome to the world of Internet Repeater Linking as the system expands its global coverage to Antarctica. Nate Dueher, WYZ0X, has more from Denver Colorado:

--

The Internet Radio Linking Project has come to Antartica. On October 23rd, Chuck N0NHJ, set up the first Internet radio link on the continent. A few days

later we caught Chuck and a few other hams on the air to ask him a few questions. Let's listen in...

Terry, N0PQV in Denver, Colorado was the first to say hello:

--

[recording]

--

I got a chance to ask a question of Chuck that I wanted to know. Chuck, how many hams are on the station and how many are active on
IRLP?

--
[recording]
--

And yet another question from Ian, M0CJY in Rottherham, Yorkshire, England...

--
[recording]
--

One of the other questions we had was Justin KC0LBH who wanted to know all about that famous Anartic daylight:

--
[recording]
--

That's all we have time for today. If you'd like more information on the IRLP project on the World Wide Web, go to www.irlp.net. This is Nate Duehr, WY0X reporting.

--

Once again, if you are interested in tying your repeater to the Internet Repeater Linking Project go to www.irlp.net on the world wide web. (NY0X, ARNewsline(tm)) {This complete very ecxciting QSO is available in RealAudio at www.arnewsline.org on the FTP transfer page}

**

RADIOSPORTS: ATLANTA TO HOST NEXT US ARDF CHAMPIONSHIP GAMES

The South-East will host the next United States 2002 Amateur Radio Direction Finding competition. Newsline's Joe Moell, K0OV, tells us where and when the event will be held.

--

The Georgia Orienteering Club has been selected to host the second USA Radio-Orienteering Championships, to take place April 19-21, 2002. The competition will get under way near Atlanta on Friday afternoon with a practice

event, followed on Saturday by the main two-meter hunt and on Sunday by the 80-meter hunt.

In addition to the hunts, there will be a cookout on Friday evening, a dinner on Saturday night, and an award ceremony following the 80 meter hunt, all included in the registration fee. Lodging options include cabins in the park and campgrounds with RV hookups. There are also many local motels and bed-and-breakfast inns.

Standard international rules will be used for these foxhunts, which are all on foot in beautiful woods near Callaway Gardens. The Championships are open to anyone, beginner or expert.

Slovakia will host the next World Championships of foxhunting in fall 2002. Positions on USA's team that will travel to these championships will be determined by individual performances in the Atlanta event, as well as in last summer's USA Championships in Albuquerque.

It's not too early to start making plans to attend the second Radio-Orienteering Championships near Atlanta. For more details and registration information, see the official Championships Web site. The exact URL is rather long, but you can get there in just a couple of clicks by going to my foxhunting Web site: www.homingin.com. That's "homingin" -- as one word -- homingin.com. Or you can write to me at my callbook address.

From sunny southern California, where foxhunters are already practicing for the championships, this is Joe Moell K0OV, for the Amateur Radio Newsline.

--

Again, the web address for more information is www.homingin.com. (ARNewsline(tm), K0OV)

**

ENFORCEMENT: FCC VS ILLEGAL CB SETS

The FCC has gone after some illegal gear seemingly designed for operation on the Class D 11 meter Citizens Band. This, as it issues a citation to an alleged supplier of the equipment in Oregon. Amateur Radio Newsline’s Norm Steely, KI7UP has the details.

--

In its September 17th letter to Truck-n-Travel and copied to its owner, Eugene Trucking Haven, FCC Portland Oregon Resident Agent Ben Nugen leaves no doubt as to what is going to happen. Either stop selling non-FCC Certified radio gear or the consequences.

His letter states that last July 23 that agents from the FCC observed uncertified Citizens Band radios displayed and offered for sale inside the Truck-n-Travel located on East Pearl Street in the city of Coberg. The FCC says the radios included four models from Galaxy and one from a company called Delta Force. The Commission says its records show that one of these CB sets

have been granted an FCC equipment authorization. It warns Truck-n-Travel that the marketing of these CB radios, or even just advertising them is a violation of Sections 2.803 and 15.101 of the Commission’s rules. It tells Truck-n-Travel that it can fine them up to $10,000 per violation per day and that can go on to a maximum of $82,500.

The letter then gives Truck-n-Travel the same warning that numerous ham radio violators have received over the past several years. It tells the company that, in accordance with Section 503(b)(5) of the Communications Act, it has 14 days from the date it received the citation to submit any statement it has to make concerning the alleged violation. And the FCC adds that the Commission staff will use all relevant material information it has -- including information disclosed in the Truck-n-Travel reply to determine what, if any, enforcement action is required to assure current and future rules compliance.

--

More on this case as information is made available. (FCC)

**

ENFORCEMENT: NY REPEATER UNDER SCRUTINY

The FCC has told a repeater owner to explain the operation of his machine. A repeater that FCC Special Counsel Riley Hollingsworth says is on the air all by itself:

--

Hollingsworth: “We opened an audit of a repeater opewrating in Elmhurst New York, KB2PRV, after our evidence showed no identification, no appart control operator, and no apparent coordination.”
--

Hollingsworth says that the letter of inquiry went to Ramon D. Florimon who holds the KB2PRV callsign. He was given 30 days from reciept of the October 2nd letter to respond to the FCC. (FCC)

**

BREAK 1

This is ham radio news coming to you from the United States of America. We are the Amateur Radio Newsline, heard on bulletin stations around the world, including the Southern California Amateur Teleprinter Society net serving West Covina California.

(5 sec pause here)

**

RADIO REGULATIONS: FCC CLARIFIES FUTURE OF CORES

The FCC's Wireless Telecommunications Bureau has clarified several issues regarding Amateur Service implementation of the Commission Registration

System--or CORES. The ARRL Letter says that starting December 3, everyone doing business with the FCC--including amateur licensees--must obtain and use a 10-digit FCC Registration Number when filing.

Amateur licensees now registered in the Universal Licensing System or U-L-S already have been cross-registered in CORES and issued a FCC Registration Number by mail. The FCC said it planned another cross-registration by November 28th. Amateurs can check to see if they have an FCC Registration Number via a U-L-S license search. Many Internet call sign servers, including ARRL's, also can provide this information. (ARRL)

**

RESCUE RADIO: JUNGLE RESCUE ASSIST

Ham radio played a role in reuniting with his family a man who had been hiding in the jungles of Guatemala for over three decades. The C-Q Magazine website reports that 72-year-old Salomon Vides of El Salvador emerged from the Guatemalan jungle recently after hiding there for 32 years from a war that lasted about 100 hours.

In 1969, El Salvador invaded Honduras and Vides, a migrant worker, ran into the jungle to escape retaliatory raids. The Organization of American States quickly brought the war to an end, but Vides says he never got the word. He was discovered in August by Rene Sonabo, a taxi driver and Guatemalan ham radio operator, and Sonabo’s son. After persuading Vides that no one was trying to kill him, Sonabo used his amateur station to relay the news to Vides’s stunned family in El Salvador. He has since been reunited with his brother, but the family had not been able to locate his wife and three children. (CQ)

**

THE LAW: THE COST OF ATTACHING TO POLES

The United States Supreme Court is examining a complex Internet case that could eventually affect the availability of online services and what most people pay for them. The court is expected to rule by next summer on a fight over the cost of establishing and maintaining some Internet and wireless networks.

Specifically, the fight concerns the rent that cable television companies must pay utilities to attach wires for high-speed Internet service to the utilities' poles, and whether the Federal Communications Commission can control the rate. The justices also will consider whether cellular telephone companies are entitled to pay government-limited rates for attaching their equipment to utility poles.

A federal appeals panel ruled last year that the FCC does not have the authority to regulate pole rental rates for Internet service. The FCC claims Congress intended it to have that power. The Supreme Court will decide. (Published News Reports)

**

REPEATER OWNERS ATTENTION: RADIO TOWERS FOR SALE

Are you a repeater owner or a club that operates a repeater? Have you ever dreamed of owning your own mountain-top or high rise repeater site? Well if you have, listen up.

In an e-mail to Amateur Radio Newsline, Tom Swierczewski, the Zoning Representative for American Tower Corporation says that the company has several hundred communications towers for sale throughout the United States. According to Swierczewski, sites vary in height from 100 to 400 feet tall and many include large buildings.

If you or anyone you know is interested in this or if you want to receive additional information on specific tower sites, please contact Swierczewski at American Tower Corporation. The information you need to do this is in the printed edition of this weeks Amateur Radio Newsline report. More information is in cyberspace at www.americantower.com.

HAM RADIO BUSINESS: VK MAGAZINE BITES THE DUST

Another failure in the international ham radio marketplace. This, with the announcement that Australia's longest-running electronics magazine has ceased publication.

Victoria’s A-P-C News reports the current issue of Electronics Australia Today will be the last and it’s a decision saddens many V-K amateurs. This is because many generations grew up building equipment from circuits published in the magazine.

Electronics Australia Today traces its history back to Wireless Weekly, which started in 1922. Radio and Hobbies was formed out of Wireless Weekly in 1939. This was renamed Radio Television and Hobbies in the 1950s and Electronics Australia in 1965. (APC News)

HAMVENTION 2002 UPDATE: HAMVENTION TO HONOR THOSE WHO PERISHED ON SEPTEMBER 11, 2001

The Dayton Amateur Radio Association will honor the memory of those killed in the September 11th terrorist attacks and the hams who then volunteered their services to the nation by dedicating the 2002 Hamvention to the theme of Emergency Preparedness. In a letter to potential vendors, the Hamvention Planning Committee said that it was very concerned over the terror attacks and believes that emphasizing the emergency communications aspect of ham radio was a very apropos way to honor those lost in the tragedy.

The letter also contained another rather surprising announcement. The Hamvention planners say that they will limit the number of non-ham radio booths normally purchased by those in the computer industry. In fact, the letter makes it clear that the only computer related vendors permitted to the inside

display area will be those whose products directly relate to Amateur Radio.

This will be the 51st annual Hamvention. The venue remains the HARA Arena just North-West of downtown Dayton. The dates are May 17th, 18th and 19th, 2002. More information is on the web at www.hamvention.org (DARA)

RADIO MILESTONE: NRCDXAS AT #200

The National Radio Club's D-X Audio Service will have its 200th issue available this month. Founder and producer Fred Vobbe, W8HDU says he does not think that is a bad record for what he describes as a little audio based magazine talking about broadcast radio that was started in April 1985. We say, congratulations to Fred and to the National Radio Club's D-X Audio Service on this milestone. (W8HDU)

OUR HERITAGE: HELP RESTORE THE LST-325 RADIO ROOM

Bob Wilder, AF2HD, is part of the team that's restoring the LST-325 Radio Room and he needs your help. Bob says that most of the radio equipment needed for the restoration of the radio room has been found. Also, they have received a donation from a trucking company in the east who is going to pack and ship the stuff on that side of the country and transport it to Mobile Alabama where the work is taking place.

Unfortunately, some of the gear is on the West Coast. It took $190,000 to perform all the work needed to repair the ships hull, front door and ramp, as well as to sandblast and paint the ship. As a result, cash is short.

Bob says that what's needed now is to receive a donation by some west coast trucker or person who can help getting the equipment out there packed and shipped eastward. At least as far as Dallas where the East coasts trucker can move it to Mobile.

Wilder says that Fred Chapman, W4CHT is coordinating the move. If you can help -- or at least direct the group to a trucking company willing to make such a donation, please contact W4CHT by e-mail to nnn0ppe@infi.net . Bob Wilder can be e-mailed at bwild@earthlink.net (AF2HD)

HAM RADIO IN SPACE: HAM RADIO BALLOON LAUNCH DECEMBER 1ST

Arizona Near Space Research says that it will launch a ham radio carrying balloon on December 1st, weather permitting. The group had hoped to launch from a local hamfest but the urban location of the event is in enhanced Class B airspace which is currently off limits. Instead, a monitoring station will be at the hamfest event. Full information on the flight can be found on the Superstition Amateur Radio Club website. It's in cyberspace at www.qsl.net/wb7tjd. (Superstition Amateur Radio Club)

**

HAM RADIO IN SPACE: LOTS OF HAMS TALKING TO THE ISS

And while on the subject of Amateur Radio in space, hams world-wide are excited about being able to talk to the International Space Station fairly often these days. This is because Commander Frank Culbertson tries to get on the air for general Q-S-O's whenever he can. And he recently had one with Berto Willems, ON1CAU, who had his tape recorder rolling. Take a listen.

--
Audio Only - No Text Available (Download Newscast Real Audio File at www.arnewsline.org)

--

ON1CAU says that contact took place at about 15:25 UTC during the recent Scouts Jamboree on the Air. And obviously signals were 5 9 full quieting – both ways. (ON1CAU, AMSAT BBS)

SPACE EXPLORATION: 2001 A MARS ODYSSEY - A SUCCESS

NASA's 2001 Mars Odyssey spacecraft was safely inserted into orbit around the red planet on October 25 th. This, slighly over two years after the space agency suffered back-to-back failures by Mars missions.

Odyssey arrived nearly directly on its target - 480 miles above Mars' surface. No orbital insertion or areobraking problems were reported by ground controllers. 2001 - A Mars Odyssey is the space probe that hams had been invited to track when it was launched earlier this year. (NASA)

INTERNATIONAL: NZART STRAIGHT KEY NIGHT

The first ever Straight Key Night in Kiwi-Land is slated to be held on the evening of Sunday November 4th. Operation will be limited to 80 Meters from 8pm until 11pm local New Zealand time.

The event is sponsored by the New Zealand's Amateur Radio Transmitters which says to lubricate that old Morse key and enjoy an evening of old time radio fun. NZART it will be an activity night in which everyone can be a winner with a certificate to prove it. For more information visit www.nzart.org.nz on the world wide web. (NZART)

**

DX

In D-X, Gary Halstead, K8KFJ in West Virginia reports a top notch trans-Atlantic QSO on 6 meters. On October 23rd at about 13:50 U-T-C Gary contacted CN8LI in gridsquare IM64. The Q-S-O took place on 50.130 MHz with K8KFJ running 100 watts to a M2 loop at only 20 feet. Gary lives in grid EM98 in the Charleston West Va. area. (VHF Reflector)

Also, Reid Hill, KC5YKX of Corpus Christi Texas says by way of the VHF Reflector that he will be doing VHF - UHF Century Club QSL card checking at the South Texas Amateur Radio Club annual Hamfest on November 10th. Reid also says that Mark Mireles, AD5CA will be doing the Worked All States checking at the same event. The Hamfest will be held at Swanter Park in Corpus Christi. Festivities start at 8:00 AM and go to at least after lunch. Contact Reid by e-mail to kc5ykx@swbell.ne if you need card checking but can not attend this event. (VHF Reflector)

The only reason I added this ng to my eBay marketing list is that I knew
some people here would be into radio broadcasting.

Good AM (Medium Wave) broadcast transmitters which are all solid state
AND frequency agile (PLL tuned) instead of rock bound are far and few
between as FM is not only easier to design but far more popular with
both the pirate and low power licensed fraternity.

However, you can check out one unit that I sell a fair few of on my
site:

http://www.transmittersrus.com

Enter the shop then click on 'AM transmitters'.

> of CB radio.

You raise a good point. With ham tickets pretty easy to get, especially the VHF codeless ones, it is a minor wonder more don't use it whether the object of the game is to get off CB or simply widen the horizons a tad. Something under $25 and some time puts one in your pocket and that is buying the study guide new. Later tickets are just more of the same.

Granted, getting busted puts you out of the radio biz for a while but that is true licensed or not. So just for giggles, just what in hell are those hiding behind a no-license status hiding from??? While we are at it, what causes the hostility toward legal operation, licensed or not, that is exhibited by so many? What the hell is the attraction of working another illegal when no one will ever know about it but you when the ARS has a well-developed system of QSL bureaus worldwide?

Some years ago my son, about to graduate from high school, asked me why some of his friends were eating with the freshmen in about March or April. I

replied that graduation would put them into the position of actually having to compete and really do something so they went into denial mode. Without being the resident psychological genius here, it sure looks as if that is happening with CB. Are we so damned afraid of looking like a rookie? I got my seventh-grade football teams over that bullshit in a big hurry; make all the mistakes you can: I won't chew on you for anything that makes a remote bit of sense. Are we scoring ego points or enjoying a hobby? Hell's Bells, I have been at this for 46 of my 58 years and even made money at it and I learn something every damn day from Jay or whoever. There ain't no Big Red S on my sweatshirt.

As one who has done it, and as I recall actually passed the Rules and Regs test, got any thoughts???

Three things to try...

First, replace the power mic with a stock mic and test for the problem. If it goes away, you need to install some basic rf supression in your power mic. Resistors and caps do that job well, there are also ferite beads which can be used, but are not as practical for most people to buy/use.

Second... your radio to antenna coax... good stuff or cheap junk..? Replace it with non foam quality Belden RG-8 size coax. Better shielding is the key here...

Third,
Is your antenna decoupled from your coax..? Probably not by regular design. You can install as simple rf choke or balun type "un-un" at the feedpoint of your antenna. It will keep the RF from comming back down the coax line. Seven to 10 turns of the coax end wound around a 5 to 7 inch tupperware type (round food container make a pretty good rf choke. Keeping the coax in-line (edge to edge) is pretty important. As close to the antenna feed point as possible.

I wind mine around large large cut PCV sewer pipe sections and secure it with tape to start, a silicon type glue to hold it in place for the long term. Saves you from having to buy a bunch of toroids for baluns...

hope that helps.

Hi Don,

I could use this amp illegally on CB. Will it "talk over" other
people? Will you sell it to me? I have no license. I saw your ad in
rec.radio.cb so I assume you don't care if your ham amplifier lands in
the hands of an unlicensed CBer like me, right?

I saw nothing to indicate that "Don" did either and AFAIK there is
nothing illegal about anybody *owning* such an amp. Of course the folks
at Waco weren't doing anything illegal either.

>
> Aaron (or whatever your real name is),

What does my name have to do with anything? And your name is Dean? Is
that real?

> your point is well-taken,
> but it is not entirely correct. Drop it.

Not quite. The old argument that matches are legal to own and the
"responsibility goes to the individual" does not absolve illegal CBers
and those supplying them.

If it did, it would be acceptable to stand outside a grammar school
yard and peddle matches and gunpowder ("Hey man, it's the kids

responsibility not to combine the two!").

Guns are legal, but they're not peddled at the exit gates of prisons.
Knives are legal, but they're no longer sold at airport entrances.

No, I'm not saying illegal CB is as dangerous as explosives, guns, or knives. I'm saying "individual responsibility" only goes so far. It must be tempered with social responsibility.

Not only that but mere mention of legalities is considered "off topic"
by many in the NG. (Funny, but promotion of irrespsonsible behavior is
not considered "off topic" by those same folks)

Absolutely correct, and when the off-topic posts about amps and
freebanding stop, then I won't have a reason to post off-topic
to complain about them.

What the hell does Waco have to do with my criticism of a guy who
includes rrcb in his "amplifier for sale" distribution list? I think
placing an amp ad in rrcb is inappropriate. So what? Everytime someone
criticizes something you do as "inappropriate", do you yell "Waco"?

Man oh man!

"Sparky" <fgillil@tincan.org> wrote:

> Dwight has the full story...
> we spotted you on the first email...
<noise snipped>

Frank must be referring to the text of the anonymous email (below) that someone has been sending out to members of rrcb. I received a copy yesterday in my email.

Three conclusions could be drawn in light of this email:

1. Frank Gilliland started the rumor to try to convince someone that Voobner = Stewart and then later discredit anyone who posted this to rrcb. If the fictional "Aaron" is not Dwight then why did Frank start such a rumor about Dwight? That is a mean thing to do. Does Frank have a problem with Dwight? Seems like Dwight would be outraged at Frank
for doing this - Frank did say that "Dwight has the full story".

2. Frank had Dwight's permission to start this rumor to try to convince someone that Voobner = Stewart and then later discredit anyone who posted this to rrcb. If this is the case then why is Dwight so outraged in his responses to these claims? An act? I doubt this is the case. After all, who would willingly volunteer to be called "Aaron Voobner"?

3. Aaron Voobner is indeed Dwight. Frank is now making a lot of noise to try to cover this up. It is clear that Frank is "Aaron's" lackey. Could it be that Frank slipped up in admitting Voobner = Stewart and now "Aaron" has commanded Frank to clean up the mess? Is Frank now on damage control?

Was Frank upset this much when someone said that Voobner = Leland? Or when someone said that Voobner = Doug? Or Voobner = Mark? Or even Voobner = Frank? Whatever the truth is, Frank seems to be really concerned this time.

Well I didn't keep it since I don't use it myself.

Hey, have you contacted K5PF about that email? He's probably having the same problems that N7VCF did when twistie et.al. posted his number all over the group. I think it's hilarious that I'm telling the truth and they still screw it up! Imagine what would happen if you just come out and say that Voobner = Stewart: They'd never believe it if YOU posted it! hahaha!

Anywayz, I picked up about 4 dozen old reels yesterday. Spooky stuff because one of them has the original CBS broadcast of "War of the

Worlds" on it (ironic finding it so close to Halloween). Another has the
Pope
speaking in Yankee Statium on Oct. 4, 1965, and the announcers laughing
about how that's the only post-season action the stadium has seen for a
long time. Is that wierd or what?

L8r,

Frank

Re: favorite keyclowns
Date: 5-24-01

You are right, I think Twisty is the worst. His head must be up his ass from
some of the things he posts. If he only knew I had a WebTV account too, he
would FREAK OUT, LOL! I have only used it a couple of times and I use it
very sparingly because if he know about it, certain "connections" could be
found out that would reveal who I really am. You know, I really don't mind
some of the more intelligent and considerate "keyclowns" and some of them

even seem like decent folks. Suffice to say that I have had experience "in the game" and even sold a few boxes during my time before coming to the realization of what hypocrites and loudmouthed douchebags some of the keyclowns were. If they only knew, LOL! But for now let's have some fun with them. Good luck on that project you are working on and let me know if you need any advice or spare parts, I travel up to the PA area quite regularly as part of my "business".

And so two wrongs make a right? Back to that old logic again, are we?
Perpetuating a mutually non beneficial situation is ignorant at best.

BOTH freebanding/amps AND anti-freebanding/anti-amps posts are off
topic, and don't belong here, which was my initial point in the first
place. Thank you for so eloquently illustrating it for me, "voob."

Well, I just thought a barefoot competition would help to show off the superior antenna setups out there, which really do more for signal Dollar-per-dB than an amp does. From your reply, I guess I shouldn't have expected you to understand that. Ah, well.. Back to the study guide.. I have an Extra class exam in a couple weeks.

Just for shits and giggles and because I was waiting for my laundry to dry I used the ULS search feature on http://www.fcc.gov, hit search at the top and look on frequency.

My quick scan found great heaps of licenses from 27.43-27.53 on the odds because most are 20kHz FM but there is some AM and data. The area from 26.07-26.47 also on the odds for the same reason are full of remote broadcast authorizations.

If you look up the remote authorizations most licenseholders that I checked also have authorization in the 450 UHF band which is fortunate when the spots are high but not so cool when a repeater is not near.

Appears that the Commission is back to authorizing things in the freeband judging from the dates of the licenses.

Sideband so do you think the AKC should just sit by and let the keyclowns talk about off topic items, and yet chastize the AKC for doing the same? If what you are saying is true THEN ALL THE JOKES ETC THAT ARE POSTED HERE SHOULD BE BANNED OR REPORTED??

> so far...

Whoa, you are WAY off base there, Skipp. Most of the broadcast
transmitters I've seen (and I've seen a lot) are grid-modulated
Class C jobs, which is a bit more complicated than FM, but is a
lot more efficient than plate- or screen-modulation. The newer
solid-state transmitters use a similar method almost exclusively,
but few are made for the higher kilowatt range due to the better
reliability, simplicity, and cost-effectiveness of a good power
tetrode.

Now if you are talking 'clean', that can be many things, such as
linearity, IMD, harmonics, etc. All those factors have tight limits
imposed by the FCC, and you will find that, all else being equal,
a solid-state transmitter is just as 'clean' as anything else, and
a bit more expensive to boot. And any good BC engineer would never
put the transmitter right to the antenna without running it through
an array of filters and traps to keep the signal spectrally clean,
even when the transmitter is malfunctioning.

Philip's post is pretty accurate, Skipp, maybe you should do a
little field work sometime.

Twistedhed <twistedhed@webtv.net> wrote in message
news:19496-3BE2B35E-282@storefull-121.iap.bryant.webtv.net...
From: kenneth.vaughan@worldnet.att.net (Kenneth Vaughan)
the other morning i awakened quite early,and as the sun came up,i rushed
outside to get in a few minutes constructing the verticle elements for
my six element beam......all before i had to head out to work. the air
was cool and there i was...happy as a clam....and beginning to think
about calling in to work to take a sick day......when i
thought..."damn,im addicted to this hobby" i had to chuckle at the
thought of a bunch of cb-ers all sitting around in a circle lamenting
about the destruction that "the hobby" had wrought in their lives,the
lost jobs,the lost wives,the never ending quest/hunger for that next hf
rig,or linear amp with just a few more watts in it........any way,i
decided that,even if there was a cure....i wouldnt take it. i love it
all,the skip,the incessant static that is music to my ears.even the
occasional dull witted individuals that one has to tolerate on the band.
its all good.......and its all worth while. gentlemen,what would the
world be like with out this great hobby? i cant imagine. good dx-ing!!
elpasogunslinger (ps....i finished up the last of the elements,and made
it to work....a few minutes late) :)

"Texas been coming in like gangbusters. Congratulations on the beam as I
know you will derive much pleasure from it. Point it over to
the 'pile..last time we had a hurricane in the Gulf between us, it
seemed like we had a telephone connection. Where the hell is hurricane
Michele, anyway? I need to check the weather and marine forecast..I have
an extremely busy weekend so I should get plenty of radio time. Those
storms make for some really ill defined radio conditions. When ya' hear
the left coast of the 'pile, send me an email, we'll put the spoke on
ya'! Have a great weekend."

Well, my first license was a real bitch, but they didn't have a question pool for commercial licenses. I have seen the pool for this years tech ticket, and I would be really suprised if anyone -couldn't- pass it (assuming they spend a little time to study).

Just to suggest a possible motive: If these amp contests are any indication of the illegal attitude (of some), it is a contest to see who is 'the best'. And in order to be the best in the amateur community they would need to pass the hardest test, as well as learn some code. So maybe these same people that want to be the king-of-the-hill have just chosen to do it in an arena where there is no real competitive challenge, other than buying the biggest amp.

But I really think it has to do with (1), the lack of understanding that radio communication is really about 'communication', and (2), that their competitive nature was nurtured by watching too much professional wrestling and cartoons (victims of television, the perfect babysitter).

That's my opinion, subject to revision.

> Yeah he could prefer to remain anonymous and post from google like you.

Or Aaron and Sparky. Or is that different?

As Google posts usually contain the senders ISP number, how is this more anonymous than a dynamically assigned number like Aarons AOL number (or my ISP number in my headers).
My ISP has stopped sending my e-m addy in every post, and the ISP number changes every time I connect. So all you have is the name of the ISP, and any information I allow y'all to have. My ISP can still trace any message sent by their customers if they need to.

But as Bert just wants to be able to "killfile" the messages he has no interest in reading, anonymity is not the issue, and using Google would not achieve his goal.

Hi Twistedhed.

The music playing, swearing, high power amps, etc must provide great cover
for the terrorists messages.
Ok, so they may not hear each other above the noise, but neither can anyone
else.

The occational skip conditions provide great chances to talk to their own
country... if it just happens to be running right at the exact time they need
it to.

The fact that the band is available for anyone to listen to, and that 1000s
of people will hear their messages must really make CB the ideal choice for
secret terrorist messages.

The size of a CB and 1KW illegal amp must make them the perfect choice for
hand-held use by terrorists while on a "mission".

What terrorist would want to use telephones, internet, e-mail, and "snail
mail" for reliable, private, long distance communications, when they could
use CB?

Leland C. Scott <abuse@cotse.net> wrote in message
news:dJMD7.33137$Gd6.754220@typhoon.mw.mediaone.net...
^
^ The problem with export radios is they are perfectly legal for Hams to own
^ and operate on the Ham bands. I don't think it's really a money issue.
^ Right now there is nothing illegal about anyone owning one of these rigs,
^ or selling them that I know about at the moment. The FCC however takes a
^ different view with amplifiers, so if a CBer has an amplifier they assume
^ it was used even if they never saw it connected. The legality part comes in
^ to play when the radio is operated, either on it's intended Ham bands, by a
^ duly licensed Ham, or illegally outside of those bands by anyone.
^
^ <snipped>

Hi Leland,

I have to agree that there are measures that could be taken to restrict the flow of equipment into the hands of CBers.
I say "restrict" because, to be honest, you cannot stop it totally. You only have to look at all the illegal sales that happen every day such as Cigarettes sold to children, Fireworks sold to children, Illegal porn... the list goes on.

Once every few years, one of our "Trading Standards" offices will run a "sting" operation by sending children into a few shops to buy Cigarettes. They will then make a report on the number of shops that broke the law. Nothing ever comes of it. It is well known that the law is broken EVERY DAY, by a large percentage of small shops, but NOTHING gets done.

This time of year, we have a big problem with fireworks. The shops sell them to children, who then play with them... until someone loses a limb. The police know it happens, they know the law, they know the death and injury figures, and they still do nothing. A policeman once said "It's alright... we did it when we were children", so much for the law protecting the innocent.
Personally, I believe that public sale of fireworks (read explosives) should be banned. Once a year, our small town has an incredible outdoor display of fireworks + lasers (set to music), stage acts, and sideshows. The company who provide the display also do displays for big international events.
The cost of entering the grounds of the historic building where this is held is only about £4. As you can imagine, our narrow streets cannot easily cope, and police must have to be imported from local areas.

So, the question must be: Why are steps not taken? The authorities in both of our great countries must be aware that more stops could be taken to reduce illegal sales, but do not put measures in place.

I wonder how much tax the UK government receives from the sale of Cigarettes to children. I refuse to believe that this could be totally ignored by a government under pressure to keep income tax down.
It must also be considered that if you ban the shop sales, then "black market" sales will increase to supply the demand (totally illegal CBs still become available here). The "Black Market" sales provide no tax for the goverment, and policing is not cost effective when there is no taxed alternative.

In my local "free ads" papers, people openly sell illegal CB equipment. Much of it is even illegal to possess, proof of use is NOT required for non-approved CBs. It would be easy for the RIS to visit make the call, visit the people, and seize the equipment.
I have NEVER heard of this happening, and out of the 1000s breaking the CB rules every year, less than 30 people get busted. Busts usually follow reports of inteference, and an un-cooperative attitude from the CBer.

I seriously doubt if the RIS has the funding to run an "all out assault" on illegal CB just for the sake of it. So they direct their resources at tackling those they know to be causing a problem.
As your country has Licence free CB, then it is possible that they are even less willing to pay out to police it or add new rules than our "under-funded" RIS and RA are.

Obviously, funds have to be targetted. Not only is it important that the action is effective, but also that the public see it as money well spent.
If I was asked whether my government should tackle illegal CB, illegal drugs (and so drug related burglary), illegal sales to children, or child porn...
It would be a hard choice, but I would start by crossing illegal CB off the list, it just doesn't compare to the suffering related to the other crimes.

Do you have problems with under-age smoking and Fireworks being used as childrens toys in the US?

Regards,

Brainbuster.

Maybe we should write to santa.... we could have a better chance.

At least we have seen some changes that we wanted, but if they do scrap the licence (as they keep promising), then we may not see any more changes for some time... if ever.
I am not so sure they will be too bothered once licence numbers are not an issue. The numbers keep dropping, and will surely soon reach a point where the admin cost will exceed the revenue. The figure given last December was 30,000 with the number dropping at 10% per year.

Out of interest, what was the last significant change to the CB service in the US?

Brainbuster.

Hi Sideband,

As long as they legalise SSB before it becomes licence free. If they take licence fee out of the equation, they may not bother making any more changes.

Of course, they could give SSB in the hope that it attracts more to CB, and increases their income from licences.

Regards,

Brainbuster.

Okay Moparholic - I really tired having my browser launch for your stupid
.sig,
only to find this off-topic drivel with your petty little vendetta. I
could just put you in my killfile, but you actually annoy me. Your
continued postings of Seth Jackson's earnings are not only spam, but
since they are off-topic, may well constitute an invasion of privacy
(even if those numbers are available to those who wish to seek them on
on the web.) Most certainly, they qualifies as stalking.

So, be cautioned, every off-topic article you post, or threat that you
make, will be forwarded to WebTV's abuse folks. Trust me, I was a
moderator on a moderate big eight newgroup for years, and I can and
will do this in a way that will cost you your service if you do not
cease and desist. This will be your only notification. And unlike the
rest of us posting thru ISPs with computers, I don't think your little
TV box will be much use to you if you lose your WebTV account because
of violations to their terms of service.

One last thing - DO NOT e-mail me at any address. You are herewith formally notified that to do so will be reported as harassment.

Moped, It has been shown here with more than one post perhaps you should
shut the fuck up... whats your excuse for these they arent in the Yankees Ng
they are from this NG. There are more than 1 so its no slip of the tounge.
Just your pathetic lies again, asshole LOL

Brainbuster, If you cannot keep up we will have to ask you to step aside. My reply was to sd jones not Bert. sd jones/anthrax is one of the google poster he has been since his days as pinhead and curious dan yet he accuses bert of using an archaic newsreader. Please Read & Think before Ye' posts

I didn't say anything about banning or reporting any of this.. I did,
however, in another message, suggest putting "OT:" in the topic so that
we might filter out the noise.. Is this so much to ask??

Of course, I expected the AKC crowd to misinterpret the direction of
this particular train of thought, thought being involved...

Unfortunately, that's about the short and skinny of it, IMHO.. CB is a term for the use of type accepted, unmodified transceivers on a particular set of allocated frequencies within the rules and guidelines set by the FCC. If you don't follow those rules and guidelines, it's no longer CB. Of course, that's just my opinion.

Snobby? Nah.. I had a legit question and got a smartass reply..

Can I help it if I can be a smartass and dangle a carrot at the same
time? ::smirk::

Actually, it was me who brought up the off-topic question in a different thread... Mopar and I are two different people, who live in two different states. Don't believe me? Run a traceroute or two, if you know what that is...

Now get your facts straight.. but before you do that, GO LAY DOWN BY YOUR BOWL!
